YubiEnterprise Services

Yubico

Nov 10, 2023
YUBIENTERPRISE SUBSCRIPTION & DELIVERY

1.1 Introduction

1.1.1 Overview

YubiEnterprise Services

YubiEnterprise Services enable organizations to procure YubiKeys efficiently, distribute them rapidly, and remotely manage YubiKey strong authentication solutions at scale. These services are the gateway to value-added service offerings.

YubiEnterprise Subscription

YubiEnterprise Subscription provides cost-effective and flexible YubiKey procurement and rollout. It simplifies the acquisition and rollout of phishing-resistant authentication, with future-proofed flexibility.

Benefits

- **Lower cost to entry**: Gain phishing-resistant multi-factor authentication for very low prices per user per month (OPEX) with additional entitlements and discounts.
- **Flexibility**: Enable user choice to select preferred YubiKeys with the option to upgrade as needs evolve.
- **Future-proofed**: Ensure security is always prioritized as your business evolves and you experience employee turnover and/or replace lost or stolen keys.
- **Faster rollouts**: Quickly deploy and protect your workforce and your brand. Stay connected to security experts via Professional Services, a dedicated Customer Success Manager, and Priority Support.

Subscription Use Cases

- **Connecting to an IDP or Authenticating only to FIDO-enabled sites**
  Choose Base Tier (FIDO-only) Security Key Series

- **Securing both legacy and modern apps and/or services**
  Choose Advanced Tier (Multi-protocol) YubiKey 5 Series

- **Achieving compliance (i.e., FIPS, CSPN)**
  Choose Compliance Tier (Certified) YubiKey 5 FIPS Series, YubiKey 5 CSPN Series

The tiers and their contents are described in detail in *Modes of Purchase.*
YubiEnterprise Services

YubiEnterprise Delivery

Providing distribution and logistics for YubiKeys, YubiEnterprise Delivery is a cloud-based service for streamlined distribution of YubiKeys to end-users’ offices or residential addresses, both domestic and foreign.

- Ship Yubico products to end-users, tracking them through the system with seamless support from the experts at Yubico
- Access the service through the YubiEnterprise Delivery Console or integrate the service into your own IT flows using YubiEnterprise Delivery public APIs
- Place individual shipment requests or upload shipment requests in bulk using CSV files
- Check current inventory levels at a glance
- Get immediate information on product and shipping costs, as well as all other details relating to purchasing and shipment.
- Generate reports on all shipment requests over time for interdepartmental cross-charging.

Our Getting Started video shows how quickly you can get up and running with YubiEnterprise Delivery.

1.1.2 Workflow

In the typical use case, an enterprise or organization purchases a subscription to cover their security key needs over time. Modes of Purchase describes the options in detail.

The enterprise or organization then uses YubiEnterprise Console to ship the security keys to their end-users as required. Some of the keys might be shipped to head office and/or branch offices for distribution in person, and many will be shipped to the home addresses of employees working remotely. To help perform these tasks, the YubiEnterprise account owner usually assigns privileges (roles) to others in their organization so that they too (or instead) can use YubiEnterprise Delivery to ship security keys to the end-users.

1.1.3 Prerequisites

Through your Yubico sales person or a distributor, Yubico’s channel partner, your organization issues a purchase order for:

- YubiEnterprise Subscription Services (or non-subscription products)
- YubiEnterprise Delivery Services
- Delivery Services (Shipping) Credits. For details on what this covers, see Delivery Services Credits.

The YubiEnterprise Delivery Console (GUI) requires only a browser such as Chrome, Firefox, or Edge, with the popup-blocking function disabled. For the API requirements, see API Onboarding Playbook.

To file a support ticket for YubiEnterprise Delivery, click Support.
1.2 Modes of Purchase

The mode of purchase affects the selections you make when using YubiEnterprise Delivery for shipment requests. You can purchase directly from Yubico or you can purchase from Yubico’s channel partners, i.e., distributors and resellers (see Purchasing Through Resellers/Distributors below).

There are two modes of purchase, Subscription or Non-subscription (Perpetual).

1.2.1 Subscription

Since the exact numbers and models of YubiKeys you will need may be difficult to predict - especially for an organization in a rapidly changing environment - Yubico offers the option of purchasing licenses that allow you to select the model and form factor you require according to need as and when it arises.

Subscriptions are charged at a fixed price per user per month for a user license, granting you access to a range of products within a tier, for a specified number of users and maximum flexibility. You and/or your end-users choose any YubiKey with the assurance that when your needs change (e.g., upgrade from computer with USB-A to USB-C) or new keys within the same tier become available, you can upgrade immediately.

The tables in Tier Options show which models of YubiKey and Security Key by Yubico are available in which tier(s).

1.2.2 Tier Options

Tier options apply to subscription modes of purchasing. The enterprise tiers are:

- **Base** - Standard, with Replacements for Primary and Backup
- **Base** - Plus, with Replacements for Primary and Backup
- **Advanced** - Standard, with Replacements for Primary and Backup
- **Advanced** - Plus, with Replacements for Primary and Backup
- **Compliance** - Standard, with Replacements for Primary and Backup
- **Compliance** - Plus, with Replacements for Primary and Backup
- **Plus**: Most services and a base level of entitlements are included.
- **Standard**: Most entitlements are available only à la carte and priced accordingly.

**Subscription Support Services**

As you experience employee turnover and/or need to replace lost or stolen keys you are covered. Priority Support with a Customer Success Manager to help you in your journey are included. The Plus plan even includes credits that you can use towards Professional Services to help you deploy YubiKeys quickly to protect your workforce and your brand. The **Features and Benefits** of YubiEnterprise Services subscriptions provides more detail.

**Non-subscription (Perpetual)**

Outright purchase of physical keys): Purchasing set numbers of specified models of key on a perpetual basis assumes that you know exactly how many end-users you will have, as well as how many and what kinds of keys those end-users will need. It also assumes that you have accurately estimated your employee turnover rate, and the number of end-users who will lose their keys. None of the advantages of the subscription purchasing model are available to those who only purchase physical keys.
1.2.3 Features and Benefits

As of 24 January 2023, YubiEnterprise Services presents Subscription (2.0). If you purchased YubiEnterprise Subscription before this date, the options that came with Subscription (1.0) are shown in your Console, but that subscription version is no longer available for sale.

Subscription (2.0)

All Plans

- Procurement that is fast, predictable, and cost-effective
- Organizations can upgrade to higher tiers as needs evolve
- Subscriptions available for 500 users or more
- Form factor flexibility
- Purchase backup YubiKey subscriptions at a discount to ensure your backup authentication mechanism is as strong as your primary one and to enable easy self-service account recovery.
- 24x7x365 Priority Technical Support included: easy access to Yubico security experts. Yubico Support Services Overview can be found here https://www.yubico.com/support-services/
- Extended warranty: warranties cover the initial term of the subscription plus the first renewal.

Plus Plan

- Replacement licenses allow you to cover up to 25% of subscribed users per year, with an option to add on additional users as needed a la carte, due to turnover, lost or stolen keys, and upgrades
- Maximum discount on licenses for backup subscriptions
- 5% of base purchase as funds available to apply toward Professional services
- Option for one bulk customization event per year included.

Standard Plan

- Choose the number of replacement licenses for turnover, lost or stolen keys, and upgrades.

Subscription (1.0)

- Procurement that is fast, predictable, and cost-effective
- Organizations can upgrade to higher tiers as needs evolve
- Subscriptions available for 500 or more users
- Replacement licenses allow you to cover up to 25% of subscribed users per year to cover turnover, lost or stolen keys, and upgrades.
- Maintain buffer stock to accommodate urgent needs: keep an extra stock of 5% of your order at no additional cost. If you subscribed to multiple tiers, the buffer stock is proportionately distributed across those tiers.
- Purchase backup YubiKey subscriptions at a discount to ensure your backup authentication mechanism is as strong as your primary one and to enable easy self-service account recovery.
• Technical support included: easy access to Yubico security experts. Yubico Support Services Overview can be found here.
• Extended warranty: warranties cover the duration of the subscription.

1.2.4 Terms & Conditions

For detailed information, see the terms relevant to your subscription.

Example Subscriptions

Subscription (2.0) Example

Plus Plan

Purchase a subscription for 400 users, two per user, from the Base tier (800 licenses), and for 600 users, two per user, from the Advanced tier (1200 licenses). You are entitled to upgrade annually 25% of the license units in each tier as Replacement stock, so 200 license units are automatically provided to you in the Base tier and 300 in the Advanced tier. Although you only paid for 2000 license units (800 + 1200) in your Initial order, you actually get a total of 2500 licence units in the first year of your subscription. You also get a discount on additional replacement or backup licenses.

Subscription (1.0) Example

Purchase a subscription for 400 users, two per user, from the Base tier (800 licenses), and for 600 users, two per user, from the Advanced tier (1200 licenses). You automatically get 5% more license units free as Buffer stock for each of the tiers to which you subscribed, so in this example, 40 licenses from the Base tier and 60 from the Advanced tier. You are entitled to upgrade 25% of the license units annually in each tier as Replacement stock, so 200 license units are automatically provided to you in the Base tier and 300 in the Advanced tier. Although you only paid for the 2000 license units in your Initial order, you actually get a total of 2600 license units in the first year of your subscription. In addition, you get a discount on backup licenses.

1.2.5 Purchasing Workflow

The subscription contract is a signed order form that covers Yubico terms and supersedes all other documents, followed by a purchase order (PO), which is required for invoicing and payment. The start date of the subscription determines when the annual replenishment of the Replacement stock takes place.

As soon as a PO is accepted, it is entered into the YubiEnterprise Delivery system, where it can be accessed to get information for requesting shipments, such as quantities of each product purchased and reseller and/or distributor information.

All POs must have an email address for each of the following individuals:

• The distributor
• The reseller
• The customer.

If a distributor is purchasing products for a reseller, and that reseller is selling YubiEnterprise Delivery to an end-customer, Yubico needs all three email addresses. Only if YubiEnterprise Delivery is not involved are these email addresses not required. For example, if the distributor does not want the reseller to access the Console, then no email address for the reseller is required on the PO. However, if the reseller cannot access the Console, then that reseller’s end-customer cannot access the Console either.

1.2. Modes of Purchase
1.2.6 Subscription Renewal

Subscription (2.0)

The subscription automatically renews for original subscription term length unless one party provides the other party with written notice of non-renewal at least 30 days prior to the end of the current term.

Subscription (1.0)

The subscription automatically renews for a one-year term unless one party provides the other party with written notice of non-renewal at least 30 days prior to the end of the current term.

Co-Terming

Yubico supports co-terming for YubiEnterprise Delivery Subscription, allowing organizations to add users and services at any time during the term of the subscription. The added users and/or services will have the same term end date as the original subscription. Customers pay based on the pro-rated term of the remaining subscription period.

1.2.7 Purchasing Through Resellers/Distributors

The entity through which you submit a PO is always referred to as a channel partner. “Channel partner” is a term that covers distributors, resellers, and even Yubico itself. Yubico’s Channel partner ID (or ChannelPartnerId or channelpartner_id) is “1”.

Note: The selection of channel partner is not supported in the /shipments API.

Because inventory is sorted according to the source from which it was purchased, when requesting shipment, distinguish between inventory purchased directly from Yubico and inventory purchased through distributors and resellers doing business with Yubico. The Dashboard shows your total inventory of any given product, combining quantities purchased from all sources: both directly from Yubico and indirectly through channel partners. To find out what is in which inventory, check your purchase orders.

To find out what the channel partner (reseller or distributor) ID is:

   **BEFORE shipment**
   The name of the channel partner (reseller or distributor) is shown on the Purchase orders tab, and the channel partner ID is shown on the PO detail popup accessed by clicking on the Purchase order number:
After shipment

The **Channel partner ID (Reseller or Distributor)** is shown on the shipment request detail page, accessible by clicking the ID of the shipment request on the **Shipments tab**.

**Purchase order #: PO01234**

NetSuite sales order number: SO01234  
Order date: 07 Jul 2023  
Reseller: Yubico  
Reseller ID: 1

**1.2. Modes of Purchase**
When an end-customer purchases through a reseller or distributor, the customer’s view of the console shows neither the cost of the products nor the shipping costs. Only the shipment status is shown to the end-customer.

To file a support ticket for YubiEnterprise Delivery, click Support.

1.3 Costs of Shipping and Taxes

For up-to-date shipment pricing to our supported destinations, please see our YubiEnterprise Delivery pricing table.

1.3.1 Delivery Services Credits

YubiEnterprise Delivery service customers will be invoiced for Delivery Services Credits to cover shipping and taxes after the fact.

Note: Customers with credits remaining after having paid in advance for them will continue to be able to draw them down until those credits are exhausted.

YubiEnterprise Delivery Shipping/Services Credits are shipping fees, a Shipping Credits SKU that is invoiced after shipment. For each shipment request, YubiEnterprise Delivery will automatically deduct the appropriate shipping fees and calculate the product taxes based on destination address and shipping taxes based on location from which the products are shipped.

At the end of every month in which shipment requests are made, Yubico invoices you.

The apportioning of the taxes / VAT across shipping and product is shown:

• On the invoice sent at the end of the month in which shipping was requested.
• On the Console - each shipment request that is made is assigned an ID. To display the tax or VAT charged for any given shipment, on the Shipments tab or the Dashboard tab, click on its Id in the lists of shipments and recent shipments.

1.3.2 Shipping

Shipping costs are determined at the time of shipping. They are based on:

• The weight/size of the package - this is affected by the way the keys are packaged, in trays or in blister packs. It is cheaper to ship large volumes of keys in trays than in blister packs, because the blister packs result in heavier, more voluminous packages.
• Destination
• Type of shipment, expedited or normal.
Sales Tax/VAT on Shipping

The VAT or sales tax charged for shipping is distinct from the VAT or sales tax charged for the product itself. Sales tax or VAT is charged on shipping costs at the rate imposed by the location where the shipment originates (see Delivery Policies).

1.3.3 Sales Tax/VAT on Product

Yubico calculates product taxes based on shipment destination. When the Delivery Services Credits are purchased and invoiced in advance, the rate charged is 10% for US and Canadian destinations. Products are taxed at the actual tax rates of shipping destination, and the customer is charged by aggregating individual shipments at the end of each month in a consolidated invoice. At the end of each month in which shipments are dispatched, Yubico’s invoice shows the reconciliation of the Delivery Services Credits purchased with the amounts actually charged.

Note: Sales tax/VAT on product is not calculated until the shipment has been shipped.

Method of Calculating VAT

- If you are based in the Netherlands, Yubico charges VAT on the initial invoice.
- If you are based in the EU but not in the Netherlands and you provide a valid non-Netherlands EU VAT number, no VAT is charged on the initial invoice.
- If you are based in the EU but not in the Netherlands and you do not provide a valid non-Netherlands EU VAT number, VAT is charged based on shipment source, which is the Netherlands.

1.3.4 Exemptions

Sales Tax

To claim exemption from sales tax, you must present to Yubico the sales tax exemption certificate for the location to which the product is being shipped.

VAT

To claim exemption from VAT, you must present the VAT number; treatment varies depending on the country. Yubico does VAT reconciliation at the end of the month. It will then credit the customer with the amount of the tax charged on both product and shipping.

1.4 Delivery Policies

1.4.1 Shipment Sources

Shipments to EU countries
Fulfilled out of the warehouse in the Netherlands until 3 April 2023, after which date these shipments will be fulfilled out of Yubico’s facility in Stockholm.

Shipments to UK
Fulfilled out of the warehouse in Great Britain.
Shipments to US, Canada and the rest of the world
Shipped out of Yubico’s facility in Santa Clara, California.

Each organization has business rules applying to delivery policies, some unique to the particular organization. These rules specify which combinations of parameters are allowed for the organization and are therefore fundamental to determining whether a shipment request can succeed. Business rules are applied before undeliverability and similar such issues are determined.

1.4.2 Post Office Box as Destination

Post Office boxes (PO Boxes) are acceptable for shipment requests for US destinations; however, this is not true for destinations outside the United States.

Although the system can deliver to Post Office (PO) Boxes within the United States, delivery to the equivalent elsewhere in the world is unlikely to succeed.

1.4.3 Key Quantities

Each destination country has a maximum number of keys per shipment request.

Products cannot be shipped via YubiEnterprise Delivery to countries that do not appear in the lists below.

500 Keys

Up to 500 keys per shipment request can be shipped to the following countries:

- Austria
- Belgium
- Bulgaria
- Canada
- Croatia
- Cyprus
- Czechia
- Denmark
- Estonia
- Finland
- France
- Germany
- Greece
- Hungary
- Iceland
- Ireland
- Italy
- Latvia
• Liechtenstein
• Lithuania
• Luxembourg
• Malta
• Netherlands
• Norway
• Poland
• Portugal
• Romania
• Slovakia
• Slovenia
• Spain
• Sweden
• Switzerland
• UK
• USA

**Single Keys**

No more than one (1) key per shipment request can be shipped to the following countries:

• Australia
• New Zealand
• Philippines
• Indonesia
• Singapore
• Japan
• Thailand
• Saudi Arabia
• Taiwan
• UAE
• Mexico
• Israel
• Chile
• Hong Kong
• India

For bulk shipment to these countries, contact YubiEnterprise Delivery Support.
1.4.4 Modes of Delivery: Normal vs Expedited

Only Normal shipping is supported for the countries listed below. Therefore the Expedited option cannot be selected for these countries.

- Australia
- New Zealand
- Philippines
- Indonesia
- Singapore
- Japan
- Thailand
- Saudi Arabia
- Taiwan
- UAE
- Mexico
- Israel
- Chile
- Hong Kong
- India

To file a support ticket with Yubico, click Support.

1.5 Onboarding

The current guide (https://console.yubico.com/help/) is available without logging in.

1.5.1 Prior to Onboarding

After the Prerequisites have been met, Yubico does the following:

1. Creates a YubiEnterprise Delivery account for your organization
2. Enters the purchased products and delivery shipping credits into your organization’s YubiEnterprise Delivery account
3. Assigns YubiEnterprise Delivery login privileges to your organization’s enterprise account owner (Org Owner), who is nominated when the first purchase order (PO) is submitted
4. Emails the login credentials to the Org Owner.
1.5.2 Onboarding Workflow

Logging in to your YubiEnterprise Delivery account always requires a YubiKey except in the first phase of onboarding. In this first phase, Yubico creates a new account in YubiEnterprise Delivery and the system creates a demo user with restricted permissions for the first Org Owner. Until the org owner enrolls a YubiKey or Security Key by Yubico, the permissions of that user/role remain restricted:

- Able to ship no more than ten keys
- Unable to invite new members
- Unable to generate API tokens
- Unable to edit the email template informing recipients that they will receive shipments from YubiEnterprise Delivery.

A banner on the Console informs the user of these limitations during this initial phase of onboarding. It tells the user to register a WebAuthn credential (i.e., a security key) to finish enabling their account. The banner provides a link to the user management page where the org owner can register their credential. For instructions, see Adding WebAuthn Credentials.

If the Org Owner has not already got a YubiKey, that person should use this window of opportunity to ship keys to themselves and up to nine other people who are to become YubiEnterprise Delivery members.

Once the demo user registers a security key with YubiEnterprise Delivery, that person acquires the full permissions of an Org Owner, and all capabilities of the account are fully enabled.

Procedure

1. The Org Owner (demo user) logs in, and clicks the privacy policy link to accept Yubico’s terms and conditions. At this point, the org owner can already verify that the YubiEnterprise Console dashboard displays the information corresponding to the initial purchase order(s), including the expected quantities of products in the applicable categories:

- Available subscription 2.0 licenses
- Available subscription 1.0 licenses
- Available standard products inventory
Verifying quantities purchased

To see the explanation for what products are available in each of these categories, see Key Models Per Tier. (The term “tier” applies to subscriptions.)

**Note:** It might be necessary to toggle the **Only show shippable inventory** switch on the top right of the screen.

It might be necessary to adjust the view to correspond to your situation and your permissions. If you do not see what you expect to see, check Distributor and Reseller Involvement in Onboarding. For a full understanding of roles in YubiEnterprise Delivery, see Roles/Permissions.

2. The Org Owner uses the system to request shipment of a bare minimum of one key to themself. To avoid losing access to the system if the original security key is lost, all users should make sure to register at least one additional key with YubiEnterprise Delivery.

3. The Org Owner receives at least one YubiKey and uses the information on the Packaging page to validate the packaging has not been tampered with (as do subsequent recipients of products shipped via YubiEnterprise Delivery). The authenticity of the YubiKey itself is validated by following the guidelines on https://www.yubico.
The Org Owner then registers with the system, thereby ending the first phase of onboarding and gaining access to the full capabilities accorded to an org owner.

4. The Org Owner configures new YubiEnterprise Delivery accounts for the other key recipients on the Settings tab by:
   - Entering the email addresses of the Org Members who will be managing the YubiKeys
   - Assigning roles to those Org Members. See Roles/Permissions.

**Note:** Ensure your organization has at least two Console Owners. Console Owner is the only role that can perform password and account resets for users who have been locked out. If your organization has only a single Console Owner and that person locks themselves out or leaves your organization, you must contact Yubico to set up a new Console Owner.

5. The system automatically emails login credentials to the Org Members. However, they will not be able to activate their accounts until they register their keys.

6. The Org Members log in to the Console, register their keys, review the privacy policy, and accept Yubico’s terms and conditions before starting to manage and/or audit the organization’s inventory of Yubico products and shipping thereof.
1.5.3 Distributor and Reseller Involvement in Onboarding

Distributors and resellers (formerly referred to as “Channel Partners”) can use YubiEnterprise Delivery to manage their own and their customers’ inventories.

A Reseller can have Yubico enable the end-customer for which it purchased inventory to see that inventory. By clicking on the role label, (in this case, Reseller), the reseller can change the view to Customer in order to verify that the end customer will see the inventory.

Similarly, a Distributor can enable (and verify) inventory viewing through the Console by a Reseller for which it purchased inventory.

Yubico sets up these roles/views when it receives a PO containing an email address for each role where applicable. For example, the Reseller user must have both Reseller and Customer roles if the end customer is to use the Console, while the user in the customer org must have a Console Owner role. That alone is sufficient to give that user the Customer view.

1.5.4 Logging In

The following instructions are for users of the YubiEnterprise Console. (Your own organization could decide to implement a very similar process for its own end-users of YubiKeys and/or Security Keys by Yubico.)

Step 1
Click the link supplied in the email from YubiEnterprise Delivery, which opens in a browser. (The browser requirements are given in Prerequisites.)

Step 2
Enter the username and password supplied in the same email.

Note: Usernames must be email addresses. Any username entered without the “@” will return an error when the user tries to log in.

Note: If you allow your browser to fill in your username and password automatically, the Submit button might be grayed out. To activate the button, click in the password field.

Step 3
Click the Submit button. The browser displays a message instructing you to insert the YubiKey and touch it when it flashes its LED(s).

Step 4
When the LED(s) flash, touch the YubiKey until it stops flashing. (If you have dry skin, you may need to dampen your finger so the key recognizes your touch.)

Step 5
If your organization has more than one account—for example, the EMEA organization and the US/CAN organization—the list of accounts is displayed. Click the name of the appropriate organization.

Step 6
If the user logging in to the Console has multiple roles, the highest priority role is selected, with the top role being Org Owner, followed by Org Admin, Org Auditor, Distributor, Reseller in that order. The user then arrives at the appropriate landing page. If necessary, a different role can be selected on the Profile page (click on name of logged-in user in top right-hand corner of any Console screen).
Session Limits

YubiEnterprise Delivery users do not stay logged in indefinitely. After an hour of inactivity, you are automatically logged out. If the screen does not react after a period of inactivity, log out by going back to the home page and clicking the profile button at the top of the page. Then you can log in again.

After 24 hours you will need to log in again in any case.

Password Requirements

The password for logging into the YubiEnterprise Delivery Console must adhere to the following requirements:

- Must be between 8 and 64 characters, which can be any of the following:
  - Alpha-numeric characters
  - Symbols
  - Punctuation marks, etc.
- Must not contain any part of the username.
- Must be different from the current password.

Managing Passwords, etc. with SSO: Single Sign-On

This ability is associated with the User role. Owners and Admins can manage their passwords and so on, but Auditors cannot. If your organization is using the single sign-on (SSO) method, you cannot change your password and/or your authentication method when you log in via SSO. You must use your credentials (username, password and YubiKey) to log in. Only then can you manage your credentials.

To change any of your credentials,

**Step 1**
Log in to https://console.yubico.com/ with username, password, and YubiKey. If you belong to more than one organization, select the one you want to access.

**Step 2**
Select the Settings page. To edit your profile, on the Users tab, select your own username (you might have to scroll to find it) and click the pencil icon.

**Step 3**
On the subsequent page, Edit member Somebody@company.com,
- To change your username or email address, click the Reset user button.
- To change your password, click the Reset password button.
- To change your role (a capability only available to org owners), select the role from the dropdown list under the Change role heading and click the Save button.

**Step 4**
With your YubiKey at the ready, on the login page, enter:
- The email address associated with your YubiEnterprise account
- The password (which must be between 8 and 64 characters, and must not contain any parts of your username)

Insert and touch the YubiKey when prompted.

To file a support ticket for YubiEnterprise Delivery, click Support.
1.6 Dashboard

There are three categories of user: Customers, Resellers, and Distributors. Because each of these functions needs to manage different aspects of YubiEnterprise Delivery, the views of the different tabs on the Console are different for each category. Since it is possible for a user to have multiple roles, the Console displays a label for each view category: Customer, Reseller, or Distributor depending on the view chosen.

1.6.1 Customer View

Customers are considered to be those organizations that make shipment requests using YubiEnterprise Delivery.

For end-customers, the Dashboard gives an overview of most activities and provides Org Owners and Org Admins with a shortcut to requesting shipments. Org Owners, Admins, and auditors can:

- View product inventory
- View recent shipments
- View recent purchase orders (POs).

For more information on YubiEnterprise user permissions, see Roles/Permissions.

Since the Dashboard provides an overview of YubiEnterprise Delivery functionality, more detailed descriptions of each function are given in the corresponding topics, Shipments: Overview, Requesting Shipment: Introduction, Purchase Orders, and User Management (Settings).

The screenshots below show a representative Org Owner’s view of the Dashboard tab of the YubiEnterprise Delivery console with the applicable subsections.
The **Dashboard** displays cards for each of the different subscription plans/tiers within the primary, backup and replacement categories. Each card shows the licenses available and the total licenses in the form of numbers and a circular graphic showing the amount of product consumed and remaining. In addition, the supported form factors for each plan/tier/category can be viewed. The screenshot below shows an example of Subscription (2.0).
Available subscription 2.0 licenses

**PRIMARY SUBSCRIPTION**

*Advanced/Bio Plus tier*

<table>
<thead>
<tr>
<th>INITIAL LICENSE</th>
<th>REPLACEMENT</th>
</tr>
</thead>
<tbody>
<tr>

<td>125 / 125</td>
</tr>
</tbody>
</table>

Form factors available:

- YubiKey 5 NFC
- YubiKey 5 Nano
- YubiKey 5C
- YubiKey !

Create shipment request

**BACKUP SUBSCRIPTION**

*Advanced/Bio Plus tier*

<table>
<thead>
<tr>
<th>INITIAL LICENSE</th>
</tr>
</thead>
<tbody>
<tr>
<td>500 / 500</td>
</tr>
</tbody>
</table>

Create shipment request
**Customer View of Dashboard**

To view the form factors available for each type of subscription, click the left-pointing caret on the right of the title bar on the card for each type of subscription. The **Form factors available** popup opens on the card. This is shown on the top card in the screenshot above; the caret of the card at the bottom is unclicked and thus does not display the available form factors.

You can put in a shipment request directly from each subscription card as well as from within the Form factors available window. For more information on creating shipment requests, see *Requesting Shipment: Introduction*.

Subscription (2.0) is differentiated from Subscription (1.0), and the standard products inventory is shown simply as form factors available.

**Available subscription 1.0 licenses**

In the examples shown above, we see the subscription tiers purchased plus inventory available in addition to standard product inventory. *Recent Shipments* is shown on the Dashboard below that, along with *Recent Purchase Orders (POs)*. Entitlement to products for each subscription tier is given in *Key Models Per Tier*. 
Recent Shipments

Only recent shipments are displayed on the Dashboard. To view all shipments, click the **Shipments** tab. The information displayed in the table in the **Recent Shipments** section is explained in *Column Headings - Shipments Tab*, which is in *Shipments: Overview*.

Recent Purchase Orders (POs)

Only recent POs are shown on the Dashboard. To view all POs, click **View all purchase orders**, which takes you to the **Purchase Orders** tab. The information displayed in the table in the **Recent purchase orders** section is explained in *Customer View: Purchase Order Tab Column Headings*.

1.6.2 Reseller View

Resellers may view inventory for each of their end-customers.

The detail view of the Purchase Order displays the products purchased.
1.6.3 Distributor View

Distributors may view their resellers’ inventory for each end-customer.

The Purchase Orders tab shows the list of resellers and their customers, organized by PO.

The Purchase Orders tab shows the list of resellers and their customers, organized by PO.

To file a support ticket with Yubico, click Support.

1.7 Shipments: Overview

Manage shipments from your inventory of purchased products on the Shipments tab. Even if not all your products are being shipped through YubiEnterprise Delivery, you can track shipment requests without regard to the manner in which those shipments are processed by Yubico. Shipments that are processed through YubiEnterprise Delivery (Console, API, or CSV) are considered “Automatic”, whereas the shipments created by Yubico or a channel partner at your request (e.g., by telephone) are considered “Manual”. Any given shipment request displayed on the Console’s Shipments tab will show which kind of shipment it is in the Type column.

Org Owners and Admins can request (create) shipments and edit the requests if the shipment is of the Automated type and has not yet been processed. The Status column shows the Shipment Request Status.

Shipments Tab
1.7.1 Shipment Tasks

- **Shipping to a Single Address (Console)**
- **Bulk Upload: Shipping to Multiple Addresses**
- **Shipping Request Via API**
- **Downloading the CSV File of Shipment Requests**
- **Notifying End-Users of Shipment and Delivery**

1.7.2 Actions

From the **Actions** menu on the **Shipments** tab (next to the **Create shipment request** button), you can select from a number of options:

- **Review incompletes** - review requests that have not gone through because the request was not complete - **Reviewing Incompletes**
- **Bulk operations** - making multiple requests at once - **Bulk Upload: Shipping to Multiple Addresses**
- **Processed refunds** - see which shipment request costs have been refunded - **Refunds**

1.7.3 Viewing Shipments

On the Shipments tab, you can sort on all the column headings using different criteria. To view all the details for a given request, including the email address of the person who made the request, click on the ID of the request.

**Shipments Tab Table Controls**

**Columns**

To determine which columns will be shown and/or to hide or show them, click on **Columns** in blue, below the **Search** field.

**Columns Parameters**
To determine which filters will be used, click on **Filters** in blue, below the **Search** field. The number on the Filters icon indicates the quantity of filters that have been set; in the case illustrated, just one: “Shipment address” contains the Palo Alto value.
To determine how the information on the Shipments tab will be shown, click on Density in blue, below the Search field to select from the Compact, Standard, or Comfortable options.
Column Headings - Shipments Tab

ID To view the details of a particular shipment request, click its ID to display it as a popup. To view an example of the details of a shipment request, see Shipment Request Status below. The options for the ID column are:

• Filter
• Hide column
• Manage columns

Date Date on which the shipment request was made. The options for the Date column are:

• Sort by ASC
• Sort by DESC
• Filter
• Hide column
• Manage columns

Shipment address The address to which the shipment was or will be sent. The options for the Shipment address column are:

• Filter
• Hide column
• Manage columns

Recipient email Emails are sent automatically to the recipient about the shipment status: sent out, in transit, etc. The options for the Recipient email column are:

• Sort by ASC
• Sort by DESC
• Filter
• Hide column
• Manage columns

Delivery Normal or Expedited (rush). The options for the Delivery column are:

• Sort by ASC
• Sort by DESC
• Hide column
• Manage columns

Type How the shipping request was created, Manual or Automated (these terms are explained in Shipments: Overview above). The options for the Type column are:

• Sort by ASC
• Sort by DESC
• Filter
• Hide column
• Manage columns
Status For a list of the different statuses and their meanings, see the shipment_state_message column on the far right of Shipping Status Codes. The options for the Status column are:

• Sort by DESC
• Unsort
• Filter
• Hide column
• Manage columns

Tracking To see where a shipment has got to, click its tracking number to go to the site of the shipper. The options for the Tracking column are:

• Filter
• Hide column
• Manage columns

Ship date Date on which the shipment was despatched. The options for the Ship date column are:

• Sort by ASC
• Sort by DESC
• Filter
• Hide column
• Manage columns

Delivery date Date on which the shipment arrived at its destination. The options for the Delivery date column are:

• Sort by ASC
• Sort by DESC
• Filter
• Hide column
• Manage columns

Channel partner (reseller or distributor) All purchase orders (POs) show the channel partner name, which can even be Yubico itself. The options for the Channel partner column are:

• Sort by ASC
• Sort by DESC
• Hide column
• Manage columns
Search

The **Search term** field on the upper left of the **Shipments** tab enables you to locate any element in a shipping request, even partial words or numbers. **Clear filter** refreshes the search functionality.

A list of shipments filtered by your parameters is displayed.

To return to viewing the list of search results after clicking into one of the list items, click **Go back**. The list remains available even after refreshing the browser window while on a page of search results.

To begin again with new search parameters, reset the search by clicking **Clear filter**.

Advanced Search

**Advanced search** enables you to enter any specific parameters as shown in the screenshot below. On the **Shipments** tab, click **Advanced search**. Enter search terms in the fields you would like to filter for. If applicable, click the corresponding **Exact match** checkbox(es). Finally, click **Search**.

**Advanced search**
Shipment Request Status

The shipment request Status indicates whether individual shipment requests have been processed, have been delivered, the prices, the inventory from which they came, etc. In cases where errors have occurred, do the following to get more information:

- Click the shipment request ID in the ID column on the Shipments tab
- Click the shipment request ID in the Recent Shipments section of the Dashboard.

Shipment Request ID Popup Example In the case below, YubiEnterprise Console Support can assist the customer to top up their shipping credit from 805 (appropriate unit of currency) to at least 1000 (appropriate unit of currency).

The delivery shipping costs are covered in Shipping.

To dismiss the popup, click the Go back button or hit the Escape key.

1.7.4 Downloading the CSV File of Shipment Requests

Organization owners, admins, and auditors can download a record of the shipment requests that have been made (the information on the Shipments tab) as a CSV file by clicking the Download CSV button next to the Create shipment request button on the Shipments tab. There are two options:

- The entire contents can be downloaded - i.e., all the rows in the table, even if there are multiple pages.
- Search results. If a search term is entered into the Search field, the rows containing the search term will be downloaded as a CSV file.

To download the shipments table as a CSV file,

- To get the whole table, ensure you are on the main page and not just a popup for a single shipment, ensure that the Search field is empty, and click Download CSV.
To get only those rows of the table that contain a particular word or partial word, enter your search term into the Search field, and click Download CSV:

Customer View of Shipments Tab

Column Headings in the Shipment Requests Table (Download CSV)

The Shipment Requests table downloaded as a CSV file combines the information in the shipment ID popup with what is shown on the Shipments tab plus additional information. The column headings are listed below.

Note: Although all currency amounts displayed by the system are in US dollars, contracts, purchase orders, and invoices, etc. use the currency applicable to the parties involved.

- A - shipment_id - The unique identifier assigned by YubiEnterprise Delivery to every shipment request
- B - shipment_request_date - month/day/year
- C - shipment_update_date - month/day/year
- D - organization_name - Name of the customer organization on behalf of which the shipment request was made (typically the same throughout the file)
- E - channel_partner_id - Identifier of the distributor (Yubico’s channel partner) - this is 1 if it was a direct sale by Yubico
- F - user_email - The email address of the YubiEnterprise Delivery user who made the shipment request
- G - country_code_2 - Two-letter country code provided in available_countries.csv
- H - inventory_type - Depends on items entered in customer PO; e.g.,
  - Standard Inventory Keys,
  - Subscription Initial Stock,
  - Subscription Buffer Stock,
  - Subscription Replacement Stock,
  - Tier Perpetual Key,
  - YubiKey Shipment,
  - YubiKey Tier SKU Shipment
- I - is_delivered - TRUE or FALSE
- J - is_shipped - TRUE or FALSE
• K - shipped date - month/day/year - Date of shipping
• L - delivered_date - month/day/year - Date of delivery
• M - tracking_number - Tracking number assigned by fulfillment agency
• N - recipient_company - Name of recipient’s company
• O - recipient_email - Recipient’s email address
• P - recipient_firstname - First name of recipient
• Q - recipient_lastname - Last name of recipient
• R - recipient_telephone - Recipient’s telephone number
• S - street_line1 - First line of street address
• T - street_line2 - Second line of street address
• U - street_line3 - Third line of street address
• V - city - Name of village, town, or city
• W - region - Name or region, state, or province
• X - postal_code Postal code, post code, zip code
• Y - shipment_type - Automated (entered into the YubiEnterprise system by you) or Manual (entered into the system by Yubico)
• Z - delivery_type Normal or Expedited
• AA - shipment_state_code - see Shipping Status Codes
• AB - shipment_state_id - see Shipping Status Codes
• AC - shipment_state_message - see Shipping Status Codes
• AD - shipment_summary_description - Total number of keys plus number of each type, e.g., Total Keys: 2 yk5c:1, sky2:1 means two keys were shipped, one a YubiKey 5C and one a Security Key 2
• AE - shipment_product_cost - Cost of product alone, without tax, VAT, or shipping
• AF - shipment_product_taxes - Cell is populated if products are shipped to location where sales tax is applicable. Amount of sales tax levied on product
• AG - shipment_product_vat - Cell is populated if products are shipped to location where VAT is applicable. Amount of VAT levied on product
• AH - shipping_service_cost - Cost of shipping
• AI - shipping_service_taxes - Cell is populated if products are shipped to location where sales tax is applicable. Amount of sales tax levied on shipping
• AJ - shipping_service_vat - Cell is populated if products are shipped to location where VAT is applicable. Amount of VAT levied on shipping
• AK - total_shipment_product_cost - Cost of product(s) with tax or VAT; does not include shipping costs or tax or VAT on them
• AL - total_shipment_tax_cost - Cell is populated if products are shipped to location where sales tax is applicable. Total sales taxes levied on product(s) plus shipping costs
• AM - total_shipping_service_cost - Total shipping costs including taxes or VAT levied on them
• AN - total_keys_shipped - Total number of products shipped
YubiEnterprise Services

• AO - purchaseorder_numbers - If multiple POs were drawn on for a single request, they are separated by a pipe, e.g., PQR_123|PO-0721a
• AP - channel_partner_name - Name of the distributor from whom you purchased, i.e., Yubico’s channel partner, whose ID is given in column E.

1.7.5 Notifying End-Users of Shipment and Delivery

The YubiEnterprise Delivery system automatically notifies recipients by email when products are sent to them (see the SHIPPED template below) and when they are delivered (see the DELIVERED template below).

If there is a problem with delivery, the system automatically sends an email notification to the person who made the shipping request (see the DELIVERY EXCEPTIONS template below).

The variables in angle brackets in the templates below are automatically replaced.

**SHIPPED**

```
Subject: YubiKeys shipped!
To: <Email address of recipient provided in shipping request>

Hello, <Name of recipient, or if absent, company name>
Your YubiKeys have been shipped. If you have any questions, please reach out to your company administrator.

<Custom text, if any>

YubiKeys Shipped:
<Type of YubiKey> <Quantity>
Delivered To: <Name and address of recipient>
<Name of Carrier> Tracking Number: <TrackingNumber>

Sincerely,
Your YubiEnterprise Delivery Service Team
This is an automatically generated message from Yubico.
Replies are not monitored or answered.
```

**DELIVERED**

```
Subject: YubiKeys Delivered!
To: <Email address of recipient provided in shipping request>

Hello, <Name of recipient, or if absent, company name>
Your YubiKeys have been delivered. If you have any questions, please reach out to your company administrator.

<Custom text, if any>

YubiKeys Delivered:
<Type of YubiKey> <Quantity>
Delivered To: <Name and address of recipient>
<Name of Carrier> Tracking Number: <TrackingNumber>

Sincerely,
Your YubiEnterprise Delivery Service Team
```

(continues on next page)
This is an automatically generated message from Yubico. Replies are not monitored or answered.

DEVELOPMENT EXCEPTIONS

Subject: YubiKeys Delivery Exceptions!
To: <Email address of end-user, intended recipient>

Hello <Name of end-user>

Your Shipment request for YubiKeys has delivery exceptions. Please reach out to your company administrator. You can also reach out to us at YubiEnterprise Support <https://www.yubico.com/products/yubienterprise/contact-support/>

<Custom text, if any>

Delivery Details:
<Type of YubiKey> <Quantity>

Deliver To:
<Address of intended recipient>
<Name of Carrier> Tracking Number: <TrackingNumber>

<Error text>

Sincerely,
Your YubiEnterprise Delivery Service Team

This is an automatically generated message from Yubico. Replies are not monitored or answered.

Customizing the Automated Emails

One of the primary reasons for customizing the automated emails is when you do not need your end-users to reach out directly to Yubico if they have questions. Usually it is desirable for end-users to contact your own organization’s IT department if they have issues understanding how YubiKeys fit into your organization’s services access model.

These standard emails can be customized by adding text to the existing standard email templates. Note that the SHIPPED and DELIVERED emails are sent to every recipient, so customization is not suitable for sending an individual greeting.

**Note:** If you make a mistake in the HTML code when customizing the template, you can click the **Restore** button to return to the default. However, if your HTML is correct and you click **Update**, you can no longer click **Restore**. For this reason, consider making a copy of the default template before you customize it.

**Step 1**
On the Settings page, go to the **Email** tab and select the template to be customized: Shipped, Delivered, or Delivery Exceptions.
Step 2
Insert the text into the template. It can accept any valid HTML, including scripts. Web and email links can be inserted as HTML link elements. Put the link target in the href attribute, and put the display text for the link between the angle brackets. For example:

PLEASE visit <a href="https://yubico.com">Yubico's webpage</a> for more information, or email <a href="mailto:someone@yourcompany.com">someone@yourcompany.com</a>.

Step 3
Your HTML code is validated as you type. If your code is correct, a green banner announcing its correctness appears, and you can continue editing or click Update. However, once you click Update, the Restore button is deactivated.

If the HTML is wrong, a red banner describing the errors appears, and you can correct it and click Update once the red banner disappears, or click Restore.

Step 4
To view the customized email just created, click Send Sample.

To file a support ticket for YubiEnterprise Delivery, click Support.
1.8 Requesting Shipment: Introduction

Shipments: Overview provides general information about shipment, whereas this section provides more specific information.

The different methods of requesting shipment each have their own subsection; the information in this current section applies to all methods.

Note: Although Console users can specify the inventory they want to draw from for individual shipment requests, this option is not available for bulk shipments. Bulk shipment requests for Subscription (1.0) allow only the selection of initial, replacement, or buffer stock. When inventory is not specified or cannot be specified, the system uses the “first in, first out” rule, which means it will deduct from the oldest purchase order first.

The Dashboard displays cards for each of the different subscription plans/tiers within the primary, backup and replacement categories. Each card shows the licenses available and the total licenses in the form of numbers and a circular graphic showing the amount of product consumed and remaining. In addition, the supported form factors for each plan/tier/category can be viewed. The screenshot below shows an example of Subscription (2.0).
**Customer View of Dashboard**

To view the form factors available for each type of subscription, click the left-pointing caret on the right of the title bar on the card for each type of subscription. The **Form factors available** popup opens on the card. This is shown on the top card in the screenshot above; the caret of the card at the bottom is uncicked and thus does not display the available form factors.

You can put in a shipment request directly from each subscription card as well as from within the Form factors available window. For more information on creating shipment requests, see *Requesting Shipment: Introduction*.

Subscription (2.0) is differentiated from Subscription (1.0), and the standard products inventory is shown simply as form factors available.

**Available subscription 1.0 licenses**

![Subscription cards](image)

**Available standard products inventory**

![Inventory icons](image)

In the examples shown above, we see the subscription tiers purchased plus inventory available in addition to standard product inventory. *Recent Shipments* is shown on the Dashboard below that, along with *Recent Purchase Orders (POs)*. Entitlement to products for each subscription tier is given in *Key Models Per Tier*. 

---

1.8. Requesting Shipment: Introduction 41
1.8.1 Methods of Requesting Shipment

- Shipping to a Single Address (Console)
- Bulk Upload: Shipping to Multiple Addresses
- Shipping Request Via API

1.8.2 Address Validation

When Yubico’s address validation service catches a discrepancy between an address in a shipment request and post office standards, the system flags the affected shipment request. Requests with such discrepancies are shown as “Incomplete” in the Status column of the Console. Incompletes must be reviewed and the proposed change accepted or rejected before the request can be processed. For instructions, see Reviewing Incompletes.

1.8.3 Restrictions

Post Office Boxes

Although the system can deliver to Post Office (PO) Boxes within the United States, delivery to the equivalent elsewhere in the world is unlikely to succeed.

Inventory: Channel Partners

The entity through which you submit a PO is always referred to as a channel partner. “Channel partner” is a term that covers distributors, resellers, and even Yubico itself. Yubico’s Channel partner ID (or ChannelPartnerId or channelpartner_id) is “1”.

Note: The selection of channel partner is not supported in the /shipments API.

Because inventory is sorted according to the source from which it was purchased, when requesting shipment, distinguish between inventory purchased directly from Yubico and inventory purchased through distributors and resellers doing business with Yubico. The Dashboard shows your total inventory of any given product, combining quantities purchased from all sources: both directly from Yubico and indirectly through channel partners. To find out what is in which inventory, check your purchase orders.

To find out what the channel partner (reseller or distributor) ID is:

BEFORE shipment

The name of the channel partner (reseller or distributor) is shown on the Purchase orders tab, and the channel partner ID is shown on the PO detail popup accessed by clicking on the Purchase order number:
Purchase order #: PO01234

NetSuite sales order number: SO01234
Order date: 07 Jul 2023
Reseller: Yubico
Reseller ID: 1

123 State Street
Austin
Texas
73301
US

Firstname Lastname
firstname.lastname@acme.com
+1 999 999 9999

Products

<table>
<thead>
<tr>
<th>Inventory</th>
<th>Cost per item</th>
</tr>
</thead>
<tbody>
<tr>
<td>500 / 500 - Advanced/fBio - Plus - Primary</td>
<td>$47.53</td>
</tr>
<tr>
<td>125 / 125 - Advanced/fBio - Plus - Primary - Replacement</td>
<td>$0.00</td>
</tr>
<tr>
<td>500 / 500 - Advanced/fBio - Plus - Backup</td>
<td>$35.65</td>
</tr>
<tr>
<td>249 / 250 - Compliance - Plus - Primary</td>
<td>$49.08</td>
</tr>
</tbody>
</table>

AFTER shipment

The Channel partner ID (Reseller or Distributor) is shown on the shipment request detail page, accessible by clicking the ID of the shipment request on the Shipments tab.
Limits and Constraints

First Line

In the Console, First name and Last name and in the CSV file, recipient_firstname and recipient_lastname map to the first line on the shipping label.

Long recipient names can be problematic for all methods of requesting shipment, because the shipment request will fail if the contents of the First name / Last name fields and/or Company or recipient fields exceed the maximum number of characters permitted in these fields (shown in the table below). Workaround: When a recipient’s full name or company name exceeds the fields’ maximum lengths, split the names across the three fields, for example:

<table>
<thead>
<tr>
<th>Location</th>
<th>Field (limit=15)</th>
<th>Limit</th>
<th>Field (limit=20)</th>
<th>Limit</th>
<th>Field (limit=20)</th>
<th>Limit</th>
</tr>
</thead>
<tbody>
<tr>
<td>API</td>
<td>recipient_firstname</td>
<td>15</td>
<td>recipient_lastname</td>
<td>20</td>
<td>recipient</td>
<td>20</td>
</tr>
<tr>
<td>CSV</td>
<td>recipient_firstname</td>
<td>15</td>
<td>recipient_lastname</td>
<td>20</td>
<td>recipient_company</td>
<td>20</td>
</tr>
<tr>
<td>Console</td>
<td>First name</td>
<td>15</td>
<td>Last name</td>
<td>20</td>
<td>Company</td>
<td>20</td>
</tr>
</tbody>
</table>

Example of an overly long name before adjustment to fit the fields
Johannes-Maximilian von Derschowitz-Dampfloch zu Querdenker

Example after adjustment
Joh.-Maximilian v.DerschowitzDampflo zu Querdenker

Second Line

The second line on the shipping label maps to the name of the recipient’s company if the address is not residential. For example, the system’s address verification function recognizes that Yubico’s Santa Clara facility is in a commercial building, therefore the company name is expected in:

- The Company field in the Console
- The recipient_company column in the CSV.
- The recipient field in the API

Note: API: Do not use the /shipments recipient field to specify the name of the individual to whom products are to be shipped. For this, use the recipient_firstname and recipient_lastname fields instead.

If the address is residential, leave empty:

- The Company field in the Console
- The recipient_company cell in the CSV file
- The recipient field in the API.
Examples of Bad Usage of Company Name Field

For example, entering the following information for a shipment request would result in failure because USPS recognizes that there are multiple companies in the building whose address is 530 Lytton Avenue:

<table>
<thead>
<tr>
<th>Jan Lindberg</th>
</tr>
</thead>
<tbody>
<tr>
<td>530 Lytton Avenue</td>
</tr>
<tr>
<td>Palo Alto, CA 94301</td>
</tr>
<tr>
<td>USA</td>
</tr>
</tbody>
</table>

Similarly, entering the following information for a shipment request would result in failure because a residential address would not be associated with a company.

<table>
<thead>
<tr>
<th>Jan Lindberg</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yubico Inc.</td>
</tr>
<tr>
<td>6 Lea Rd</td>
</tr>
<tr>
<td>Dronfield S18 1SB</td>
</tr>
<tr>
<td>UK</td>
</tr>
</tbody>
</table>

Address validation takes place every 15 minutes. This means that you might have to wait up to 15 minutes to find out if your shipment request has been queued for fulfillment (see Shipping Status Codes).

Non-subscription purchases: Shipment requests can be made for up to one year after a PO is submitted.

Subscription purchases: Availability of products in shipment requests depends on the stock/inventory from which the products are drawn. (For details, see Tier Sub-categories.)

1.8.4 Inventory Matters

Subscription (1.0)

The full list of options that were potentially available in Subscription (1.0) is given below. The actual list depends on what you have purchased. Explanations for the terms in the list are given in the table below the list. For more details on subscription and non-subscription purchasing, see Modes of Purchase.

Subscription (1.0): Full List of Inventory Types

- Primary Subscr - Base Tier: Initial
- Primary Subscr - Base Tier: Buffer
- Primary Subscr - Base Tier: Replacement
- Primary Subscr - Adv. Tier: Initial
- Primary Subscr - Adv. Tier: Buffer
- Primary Subscr - Adv. Tier: Replacement
- Primary Subscr - Prem. Tier: Initial
- Primary Subscr - Prem. Tier: Buffer
- Primary Subscr - Prem. Tier: Replacement
- Primary Subscr - FIPS Tier: Initial
- Primary Subscr - FIPS Tier: Buffer
- Primary Subscr - FIPS Tier: Replacement
- Backup Subscr - Base Tier: Initial
- Backup Subscr - Base Tier: Buffer
- Backup Subscr - Base Tier: Replacement
- Backup Subscr - Adv. Tier: Initial
- Backup Subscr - Adv. Tier: Buffer
- Backup Subscr - Adv. Tier: Replacement
- Backup Subscr - Prem. Tier: Initial
- Backup Subscr - Prem. Tier: Buffer
- Backup Subscr - Prem. Tier: Replacement
- Backup Subscr - FIPS Tier: Initial
- Backup Subscr - FIPS Tier: Buffer
- Backup Subscr - FIPS Tier: Replacement
- Non-subscription - Base Tier
- Non-subscription - Advanced Tier
- Non-subscription - Premium Tier
- Non-subscription - FIPS Tier
- Standard Products
**Standard Products** are physical keys purchased outright (on your PO you will not find “Standard Products”, but instead the actual products/models that you purchased).

- **Subscription**
  - There is a primary subscription and a backup subscription for each tier (product grouping): Base, Advanced, Premium, and FIPS. Each of those tiers has Initial, Buffer, and Replacement sub-categories, explained in the table below,

**Tier Sub-categories**

<table>
<thead>
<tr>
<th>Tier Sub-categories</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Initial</strong></td>
<td>The stock in this category reflects the total number of users on the subscription. This lot can be drawn upon for 12 months from the start of your subscription term.</td>
</tr>
<tr>
<td><strong>Buffer</strong></td>
<td>This category is made available to you free of charge when your subscription begins. You can draw on it throughout the term of your subscription.</td>
</tr>
<tr>
<td><strong>Replacement</strong></td>
<td>This category is intended for those who have lost their YubiKeys or want to upgrade. The stock in this category is reset each year of the subscription to the Replacement limit.</td>
</tr>
</tbody>
</table>

- **Non-subscription**
  - The non-subscription tiers are for virtual keys. Unlike subscription tiers, non-subscription tiers have no sub-categories.
1.8.5 Timing

For Requests
Shipment requests can be edited or deleted until 2am PST (10am GMT), the day after they were entered. For instructions on these procedures, see Editing or Deleting a Shipment.

For Delivery
Normal (standard) shipping: Typically, shipments will take 5-7 days for delivery in North America and Europe. Delivery to other parts of the world will take longer.

Expedited (rush) shipping: Typically, shipments within North America can be delivered in 1 business day. It may take longer to deliver shipments to other parts of the world, but Yubico will leverage the fastest delivery service reasonably available.

Shipment Status Messages

These error messages accessible via the API tell you why a given shipment request was unsuccessful. It is worth reviewing them before making any shipping requests in order to see what sort of issues might arise and thereby avoid them in the first place.

Note: As the following table is wide, you might need to scroll horizontally.

In the Explanation column, the source of the message is given: YubiEnterprise Delivery system for internal messages, US Validation for the US Postal Service, and finally, International Validation. Messages originating from the last two are simply passed on to you by YubiEnterprise Delivery.

- See the USPS FAQ.
1.8.6 Reviewing Incompletes

The address validation service flags addresses that are problematic or defective in some way, and displays this information on the Console in the Status column on the Dashboard tab. For a complete list of the different statuses and what they indicate, see Shipping Status Codes. To ensure your shipping request is accepted and processed, always verify that it has not been flagged Incomplete.

**Step 1**

On the Shipments tab, in the Actions menu next to the Create shipping request button, select Review incompletes. The list of shipping requests with incomplete addresses is displayed:

<table>
<thead>
<tr>
<th>ID</th>
<th>Date</th>
<th>Incomplete address</th>
<th>Status</th>
<th>Actions</th>
</tr>
</thead>
<tbody>
<tr>
<td>YQpi</td>
<td>Oct 24, 2023</td>
<td>123 Sample Ln, Orangeburg, South Carolina, 29118, US</td>
<td>Address is undeliverable or could not be understood</td>
<td></td>
</tr>
<tr>
<td>2Tyr</td>
<td>Aug 20, 2023</td>
<td>530 Lytton Ave, Palo Alto, California, 94301, US</td>
<td>Incomplete</td>
<td></td>
</tr>
<tr>
<td>6XNe</td>
<td>Aug 29, 2023</td>
<td>530 Lytton Ave, Palo Alto, California, 94301, US</td>
<td>Incomplete</td>
<td></td>
</tr>
</tbody>
</table>

**Review incomplete addresses**

**Step 2**

To find out what is wrong with an address and/or correct it, click the Edit icon at the end of the row containing the item. See Editing or Deleting a Shipment. The Edit shipment screen indicates the problem, as shown in the screenshot below, for example.
The address validation process stops at the first error it finds in a given request (or in the case of a CSV file, in a given row). In the screenshot above, it stopped at the name of the recipient, but the address in the example above would not be validated either. For this reason, continue to run the **Review Incompletes** activity until no more errors are found in your shipment request.

### 1.8.7 Editing or Deleting a Shipment

You can update an address or delete a shipping request until it is locked for processing and fulfillment - see *Timing*. This applies for both Automated and Manual type requests. Note, however, that to edit or delete a Manual request, you must contact Yubico directly. Yubico staff will then go into your console and override the data they input originally and update in accordance with your wishes.

To delete shipment requests made via CSV file, see *Deleting Shipments*.

**Step 1**

To edit a shipment, click the Edit icon in the appropriate row of the table. The **Edit shipment - <ID>** screen appears, as shown below.
YubiEnterprise Services

Edit shipment screen

Step 2
Either make the required changes and click **Update** or click **Delete shipment**. The update function validates the fields, with a mouseover warning on any fields requiring input, as shown in the screenshot below:

![Edit Shipment Screenshot](image)

*Contact phone*

![Contact Phone Field](image)

*Mouseover warning*

Step 3
Verify that the system is able to validate all the input in your shipment request by running the **Review Incompletes** activity (see Reviewing Incompletes).
1.8.8 Refunds

When shipments fail to arrive at their destination, the price of product(s) plus shipping is refunded. The status of such a shipment is recorded as “Lost/Missing”.

Viewing Refunds

Org Owners, Admins, and Auditors can access refund details from the Shipments tab. On the upper right, click the Action dropdown menu and select Processed refunds.

The list of processed refunds appears. The Processed refunds table shows the following information:

- Shipment ID
- Inventory product type (i.e., shipping, subscription type, etc.)
- PO reference if applicable (i.e., link to the PO from which the refunded inventory was drawn)
- Refund quantity (this value will be “0” for shipping)
- Product name
- Refund date
- Refunded amount

To see further details, click the Shipment ID of the item, which displays the information shown in the screenshot immediately below, “Refund Detail”, and/or click the Download refund CSV file (see Downloading List of Refunds).

Refund Detail
To download a CSV file listing all the data shown on the list of processed refunds, click the **Download refund CSV** button.

The downloaded spreadsheet contains the following information for each refunded shipment request:

- shipment_id
- refund_date
- organization_name
- reseller_name
- reseller_id
- inventory_product_type
1.9 Bulk Upload: Shipping to Multiple Addresses

Review the information in Requesting Shipment: Introduction before using this method to make shipment requests.

1.9.1 Template

To create a bulk request, use the shipment spreadsheet template supplied by the Console, bulk_shipment_template.csv. Each row - i.e., each individual shipping request - is processed independently, so that issues with one request do not hold up other requests.

Always download the latest version of the template. The template is autogenerated based on your inventory and/or entitlement. When a new CSV template becomes available, the outdated version of the template no longer produces valid shipping requests. Changes in your CSV template are triggered by the following events:

- Yubico releases new products in tiers to which your organization is subscribed. Therefore, new columns are added to the template to take account of them.
We release a new version of the YubiEnterprise Delivery software that includes updates to the template itself, such as columns for additional information.

You add new products to your inventory through a new PO. Subscription customers have columns for each of the keys in their subscription tier(s).

You ship your entire inventory of a certain product, so the column for that product no longer appears in the CSV template.

Note: The CSV bulk upload does not support combining subscription and non-subscription products in a single shipment request. If you want to send someone both subscription and non-subscription products, either use a separate row for each product type, or see Shipping Request Via API or Shipping to a Single Address (Console).

Using the Template

Ensure that:

- The columns of your own CSV file correspond exactly to those in the CSV template.
- The header row from the template is included in your own CSV file.
- The contents of the cells do not exceed the limits. The columns with table cells that have limits on the number of alpha-numeric characters (including spaces) are listed in Shipment Request Fields below. Not all columns have limits. Note that the only products listed in your bulk_shipment_template.csv are those your organization has purchased, whereas the table in Shipment Request Fields lists all products.

Shipping Label Content

First Line

In the Console, First name and Last name and in the CSV file, recipient_firstname and recipient_lastname map to the first line on the shipping label.

Long recipient names can be problematic for all methods of requesting shipment, because the shipment request will fail if the contents of the First name / Last name fields and/or Company or recipient fields exceed the maximum number of characters permitted in these fields (shown in the table below). Workaround: When a recipient’s full name or company name exceeds the fields’ maximum lengths, split the names across the three fields, for example:

<table>
<thead>
<tr>
<th>Location</th>
<th>Field (limit=15)</th>
<th>Limit</th>
<th>Field (limit=20)</th>
<th>Limit</th>
<th>Field (limit=20)</th>
<th>Limit</th>
</tr>
</thead>
<tbody>
<tr>
<td>API</td>
<td>recipient_firstname</td>
<td>15</td>
<td>recipient_lastname</td>
<td>20</td>
<td>recipient</td>
<td>20</td>
</tr>
<tr>
<td>CSV</td>
<td>recipient_firstname</td>
<td>15</td>
<td>recipient_lastname</td>
<td>20</td>
<td>recipient</td>
<td>20</td>
</tr>
<tr>
<td>Console</td>
<td>First name</td>
<td>15</td>
<td>Last name</td>
<td>20</td>
<td>Company</td>
<td>20</td>
</tr>
</tbody>
</table>

Example of an overly long name before adjustment to fit the fields

<table>
<thead>
<tr>
<th>Johannes-Maximilian von Derschowitz-Dampfloch zu Querdenker</th>
</tr>
</thead>
<tbody>
<tr>
<td>Example after adjustment</td>
</tr>
<tr>
<td>Joh.-Maximilian v.DerschowitzDampflo zu Querdenker</td>
</tr>
</tbody>
</table>
Second Line

The second line on the shipping label maps to the name of the recipient’s company if the address is not residential. For example, the system’s address verification function recognizes that Yubico’s Santa Clara facility is in a commercial building, therefore the company name is expected in:

- The **Company** field in the Console
- The **recipient_company** column in the CSV.
- The **recipient** field in the API

**Note:** API: Do not use the `/shipments` **recipient** field to specify the **name of the individual** to whom products are to be shipped. For this, use the **recipient_firstname** and **recipient_lastname** fields instead.

If the address is residential, leave empty:

- The **Company** field in the **Console**
- The **recipient_company** cell in the CSV file
- The **recipient** field in the API.

**Examples of Bad Usage of Company Name Field**

For example, entering the following information for a shipment request would result in failure because USPS recognizes that there are multiple companies in the building whose address is 530 Lytton Avenue:

<table>
<thead>
<tr>
<th>Jan Lindberg</th>
</tr>
</thead>
<tbody>
<tr>
<td>530 Lytton Avenue</td>
</tr>
<tr>
<td>Palo Alto, CA 94301</td>
</tr>
<tr>
<td>USA</td>
</tr>
</tbody>
</table>

Similarly, entering the following information for a shipment request would result in failure because a residential address would not be associated with a company.

<table>
<thead>
<tr>
<th>Jan Lindberg</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yubico Inc.</td>
</tr>
<tr>
<td>6 Lea Rd</td>
</tr>
<tr>
<td>Dronfield S18</td>
</tr>
<tr>
<td>UK</td>
</tr>
</tbody>
</table>

**Post Office Boxes**

Although the system can deliver to Post Office (PO) Boxes within the United States, delivery to the equivalent elsewhere in the world is unlikely to succeed.
Inventory Sources

Note: Although Console users can specify the inventory they want to draw from for individual shipment requests, this option is not available for bulk shipments. Bulk shipment requests for Subscription (1.0) allow only the selection of initial, replacement, or buffer stock. When inventory is not specified or cannot be specified, the system uses the “first in, first out” rule, which means it will deduct from the oldest purchase order first.

The entity through which you submit a PO is always referred to as a channel partner. “Channel partner” is a term that covers distributors, resellers, and even Yubico itself. Yubico’s Channel partner ID (or ChannelPartnerId or channelpartner_id) is “1”.

Note: The selection of channel partner is not supported in the /shipments API.

Because inventory is sorted according to the source from which it was purchased, when requesting shipment, distinguish between inventory purchased directly from Yubico and inventory purchased through distributors and resellers doing business with Yubico. The Dashboard shows your total inventory of any given product, combining quantities purchased from all sources: both directly from Yubico and indirectly through channel partners. To find out what is in which inventory, check your purchase orders.

To find out what the channel partner (reseller or distributor) ID is:

BEFORE shipment
The name of the channel partner (reseller or distributor) is shown on the Purchase orders tab, and the channel partner ID is shown on the PO detail popup accessed by clicking on the Purchase order number:

AFTER shipment
The Channel partner ID (Reseller or Distributor) is shown on the shipment request detail page, accessible by clicking the ID of the shipment request on the Shipments tab.
Note: You have an inventory from each of your channel partners (Yubico itself, and/or distributor, and or reseller). To request shipment from two or more inventories, make a shipment request for each inventory. For example, to have three YubiKey 5C NFC delivered to Jan Lindberg, even if your dashboard shows that you have three such keys, if one of those keys was purchased from Yubico, the second from distributor A and the third key from reseller B, you need to make three shipment requests, each one of them drawing on a different inventory.

### 1.9.2 Procedure for Bulk Uploads

**Step 1**
Click **Create shipment request**. The **New shipping request** popup appears.

**Step 2**
From the **Bulk Shipment** tab of the **New shipping request** popup, click **Download shipment spreadsheet template (csv)**, the name of which is **bulk_shipment_template.csv**.

Do not confuse this button with the **Download CSV** button next to the **Shipment request** button on the **Shipments** tab.

**Step 3**
Get the country codes required for populating this file: still on the **Bulk Shipment** tab of the **New shipping request** popup, click **Download available countries (csv)**.

**Step 4**
Save the CSV file preparatory to populating it with your information. The only purpose of the filename is to enable you to identify it correctly when you upload it. The following steps call out only certain fields. **Shipment Request Field Limitations** below covers all the fields.
### Step 5

In the **InventoryType** column, use the values from the table below:

<table>
<thead>
<tr>
<th>Product or Inventory Name shown on Purchase Order</th>
<th>Value to use for inventory_type</th>
</tr>
</thead>
<tbody>
<tr>

</tbody>
</table>

**Note:** Although Console users can specify the inventory they want to draw from for individual shipment requests, this option is not available for bulk shipments. Bulk shipment requests for Subscription (1.0) allow only the selection of initial, replacement, or buffer stock. When inventory is not specified or cannot be specified, the system uses the “first in, first out” rule, which means it will deduct from the oldest purchase order first.

**Step 6**

The **ChannelPartnerId** column also calls for an integer.
The entity through which you submit a PO is always referred to as a channel partner. “Channel partner” is a term that covers distributors, resellers, and even Yubico itself. Yubico’s Channel partner ID (or ChannelPartnerId or channelpartner_id) is “1”.

**Note:** The selection of channel partner is not supported in the /shipments API.

Because inventory is sorted according to the source from which it was purchased, when requesting shipment, distinguish between inventory purchased directly from Yubico and inventory purchased through distributors and resellers doing business with Yubico. The **Dashboard** shows your total inventory of any given product, combining quantities purchased from all sources: both directly from Yubico and indirectly through channel partners. To find out what is in which inventory, check your purchase orders.

To find out what the channel partner (reseller or distributor) ID is:

**BEFORE shipment**

The name of the channel partner (reseller or distributor) is shown on the **Purchase orders** tab, and the channel partner ID is shown on the PO detail popup accessed by clicking on the Purchase order number:

```
Purchase order #: PO01234

NetSuite sales order number: S001234
Order date: 07 Jul 2023
Reseller: Yubico
Reseller ID: 1

123 State Street
Austin
Texas
73301
US

FirstName LastName
firstname.lastname@acme.com
+1 999 999 9999

Products

<table>

<td>$35.65</td>
</tr>
<tr>
<td>249 / 250 - Compliance - Plus - Primary</td>
<td>$49.08</td>
</tr>
</tbody>
</table>
```

**AFTER shipment**

The Channel partner ID (Reseller or Distributor) is shown on the shipment request detail page, accessible by clicking the ID of the shipment request on the **Shipments** tab.
Step 7

When you have finished populating the CSV file:

a) On the Bulk Shipment tab, click Choose file.

b) Select your CSV file, and then click Upload.

If your CSV file uploads successfully, after pre-checks have been performed, notification of success appears under the Upload button.

c) You are prompted to confirm the file you are uploading (by line count).

If you later find that there were errors in the uploaded file, you can delete some or all of the rows (see Editing or Deleting a Shipment and/or Deleting Shipments).

Note: It can take some time before your requests appear in the list of shipment requests. Always allow time for corrections in case the system finds addresses marked as Incomplete - see below, Reviewing Incompletes.

Shipment Request Fields

In the table below, all fields not marked as mandatory are optional. The Limit column displays the maximum number of alphanumeric characters permitted per field/table cell.
Table 7: **Shipment Request Fields**

</tbody>
</table>

**Note:** To find out if an address is deliverable, make a shipment request and see what status code or message it gets.
Deliverability is determined by our shipping partners, and it is their codes and messages we display when it comes to questions of deliverability. For a fuller explanation, see *Troubleshooting*.

### Deleting Shipments

This capability applies only to requests that are still editable. To delete shipment requests,

**Step 1**

On the *Shipments* tab, go to the *Actions* list dropdown, and select *Bulk operations*. The *Bulk Operations* screen appears, showing only the shipment requests that can be deleted (i.e., those that have not yet been processed).

**Step 2**

Select the checkbox in the row you want to delete (or, to delete all, select the checkbox in the header row), then hit the *Delete shipments* button on the upper right. The selected shipment requests are deleted.

To revert the *Select all* action, i.e., to deselect all the shipment requests, click the checkbox in the header row again.

To file a support ticket for YubiEnterprise Delivery, click *Support*.

#### 1.10 Shipping to a Single Address (Console)

The information in *Requesting Shipment: Introduction* applies to shipping to a single address using the console; see the *Restrictions* section, which lists the limits on field content (*Shipment Request Field Limitations*) and gives guidance on format.

**Note:** Although Console users can specify the inventory they want to draw from for individual shipment requests, this option is not available for bulk shipments. Bulk shipment requests for Subscription (1.0) allow only the selection of initial, replacement, or buffer stock. When inventory is not specified or cannot be specified, the system uses the “first in, first out” rule, which means it will deduct from the oldest purchase order first.

#### 1.10.1 Procedure

To use the Console to request shipping of keys from your inventory to an individual address, click either:

- *CREATE SHIPMENT REQUEST* in the card for the appropriate subscription on the *Dashboard*, or
- The *Create shipment request* button on the *Shipments* tab.

The *New shipping request* popup appears. The tab on the left, *Single shipment*, is shown on top by default. *CREATE SHIPMENT REQUEST* takes you directly to the appropriate subscription, whereas if you use the *Create shipment request* button on the *Shipments* tab, you must specify which subscription inventory you want to use.
Field Names

This section describes what the form expects in each field.

Channel Partner = Seller

Even if the entity that sold YubiKeys to you was Yubico itself, the Channel partner name must be selected. The Channel partner ID field is automatically populated when the Channel partner name is selected.

Name

First Line

In the Console, First name and Last name and in the CSV file, recipient_firstname and recipient_lastname map to the first line on the shipping label.

Long recipient names can be problematic for all methods of requesting shipment, because the shipment request will fail if the contents of the First name / Last name fields and/or Company or recipient fields exceed the maximum number of characters permitted in these fields (shown in the table below). Workaround: When a recipient’s full name or company name exceeds the fields’ maximum lengths, split the names across the three fields, for example:

<table>
<thead>
<tr>
<th>Location</th>
<th>Field (limit=15)</th>
<th>Limit</th>
<th>Field (limit=20)</th>
<th>Limit</th>
<th>Field (limit=20)</th>
<th>Limit</th>
</tr>
</thead>
<tbody>
<tr>
<td>API</td>
<td>recipient_firstname</td>
<td>15</td>
<td>recipient_lastname</td>
<td>20</td>
<td>recipient</td>
<td>20</td>
</tr>
<tr>
<td>CSV</td>
<td>recipient_firstname</td>
<td>15</td>
<td>recipient_lastname</td>
<td>20</td>
<td>recipient_company</td>
<td>20</td>
</tr>
<tr>
<td>Console</td>
<td>First name</td>
<td>15</td>
<td>Last name</td>
<td>20</td>
<td>Company</td>
<td>20</td>
</tr>
</tbody>
</table>

Example of an overly long name before adjustment to fit the fields

<table>
<thead>
<tr>
<th></th>
<th>Johannes-Maximilian</th>
<th>von Derschowitz-Dampfloch zu Querdenker</th>
</tr>
</thead>
<tbody>
<tr>
<td>Example after adjustment</td>
<td>Joh.-Maximilian</td>
<td>v.DerschowitzDampfloz zu Querdenker</td>
</tr>
</tbody>
</table>

Second Line

The second line on the shipping label maps to the name of the recipient’s company if the address is not residential. For example, the system’s address verification function recognizes that Yubico’s Santa Clara facility is in a commercial building, therefore the company name is expected in:

- The Company field in the Console
- The recipient_company column in the CSV.
- The recipient field in the API

Note: API: Do not use the /shipments recipient field to specify the name of the individual to whom products are to be shipped. For this, use the recipient_firstname and recipient_lastname fields instead.

If the address is residential, leave empty:

- The Company field in the Console
YubiEnterprise Services

- The recipient_company cell in the CSV file
- The recipient field in the API.

Examples of Bad Usage of Company Name Field

For example, entering the following information for a shipment request would result in failure because USPS recognizes that there are multiple companies in the building whose address is 530 Lytton Avenue:

<table>
<thead>
<tr>
<th>Name</th>
<th>Address</th>
<th>City</th>
<th>State</th>
<th>Zip</th>
<th>Country</th>
</tr>
</thead>
<tbody>
<tr>
<td>Jan Lindberg</td>
<td>530 Lytton Avenue</td>
<td>Palo Alto</td>
<td>CA</td>
<td>94301</td>
<td>USA</td>
</tr>
</tbody>
</table>

Similarly, entering the following information for a shipment request would result in failure because a residential address would not be associated with a company.

<table>
<thead>
<tr>
<th>Name</th>
<th>Company</th>
<th>Address</th>
<th>City</th>
<th>Postcode</th>
<th>Country</th>
</tr>
</thead>
<tbody>
<tr>
<td>Jan Lindberg</td>
<td>Yubico Inc.</td>
<td>6 Lea Rd</td>
<td>Dronfield</td>
<td>S18 1SB</td>
<td>UK</td>
</tr>
</tbody>
</table>

Address Fields/Lines

Fill in the address field(s) - Address line 1 (and 2 and 3 if applicable) - using the address formats provided by Google Maps (for more detailed information on this, see the note in Troubleshooting). The limits on the various fields and the options for the dropdown are given in Shipment Request Field Limitations.

Contact Phone

This field is for the telephone number of the shipment recipient. It is used by the carrier to complete the last stage of delivery. Submitting an invalid phone number may result in the order being returned to the sender.

Delivery Type

For the Delivery Type dropdown, select one of the two shipment types, Normal or Expedited. Your selection determines the shipping fee, which is calculated after you complete the shipping request.

From Stock: Inventory

Select the inventory that you are drawing on in the From stock dropdown list by clicking on the dropdown to display the options, then on the appropriate checkbox(es). Select as many inventories as you want: a separate “box” or field for each inventory will be shown.

For a complete list and explanations of the options, see Inventory Matters. In the screenshot below, the number 4 on the right in the From stock field shows that four inventories were selected - those shown below the field. (The field itself is not wide enough to display the names of more than one of them; the three dots following in the field indicate that further selections were made).
As soon as you have selected the stock and clicked in the **Shipping quantity** field for a key, any quantities you previously entered in that field are displayed.
Enter the desired quantities in the appropriate fields.

**Note:** If you select an inventory, but do not indicate **Shipping quantity** in any of the **Product type** fields, no shipment request is created.

**Finish Request**

Click **Create shipment request**. The **Shipment confirmation** popup appears:

Click **Confirm**. If all went well, you are notified that your request was accepted:
The Console provides some information on the reasons for shipping requests not succeeding; the API provides more detailed information.

These error messages accessible via the API tell you why a given shipment request was unsuccessful. It is worth reviewing them before making any shipping requests in order to see what sort of issues might arise and thereby avoid them in the first place.

**Note:** As the following table is wide, you might need to scroll horizontally.

In the Explanation column, the source of the message is given: YubiEnterprise Delivery system for internal messages, US Validation for the US Postal Service, and finally, International Validation. Messages originating from the last two are simply passed on to you by YubiEnterprise Delivery.

**Note:** To find out if an address is deliverable, make a shipment request and see what status code or message it gets.

1.10. Shipping to a Single Address (Console)
YubiEnterprise Services

Deliverability is determined by our shipping partners, and it is their codes and messages we display when it comes to questions of deliverability. For a fuller explanation, see Troubleshooting.

Shipement Status Messages

These error messages accessible via the API tell you why a given shipment request was unsuccessful. It is worth reviewing them before making any shipping requests in order to see what sort of issues might arise and thereby avoid them in the first place.

Note: As the following table is wide, you might need to scroll horizontally.

In the Explanation column, the source of the message is given: YubiEnterprise Delivery system for internal messages, US Validation for the US Postal Service, and finally, International Validation. Messages originating from the last two are simply passed on to you by YubiEnterprise Delivery.

### 1.11 API Onboarding Playbook

#### 1.11.1 Introduction

While YubiEnterprise Delivery can be driven entirely through the pre-built console, it also comes with an API that provides the ability to extend the functionality to custom applications. This API will enable your organization’s developers to integrate the API into custom solutions that precisely meet the requirements of your business.

The following points are important to master before working with the API:

**Shipment flow**
Make sure you understand the shipment request happy path flow and how to handle the error cases.

**Testing**
Use an isolated sandbox environment to reduce testing time.

**Data model complexity**
The API exposes the YubiEnterprise Services data model. It is crucial to understand the difference between product identifiers and form factor identifiers.

**Low inventory**
Prepare for initial stock running out by setting up pulling from the buffer or replacement stocks. Set up notification to admins of low inventory and automatically roll shipment requests to buffer and replacement stocks.
App maintenance
The YubiEnterprise Services API occasionally makes breaking changes. Therefore, monitor all release notes and spin up a project to prepare for migration before the change goes live.

1.11.2 YubiEnterprise Delivery Self-Service Web Portal

This example in YubicoLabs GitHub repository will demonstrate an end-to-end solution with the ability to integrate the YubiEnterprise Delivery API into a web application that users in your enterprise (or beyond) could use to create YubiKey shipment requests drawing on your organization’s inventory.

In this project you will:

1. Stand up an environment in Amazon Web Services (AWS) to handle the server-side operations for the YubiEnterprise Delivery API and for handling user authentication/authorization
2. Use the YubiEnterprise Delivery API to create, delete, edit, and retrieve shipment requests as well as verify a shipment address
3. Create a front-end application for your end users to request shipment of a YubiKey that has been defaulted by your organization.

Guide

GitHub Repository: This repository contains the code and steps required to stand up an application in AWS capable of sending requests to your organization’s instance of YubiEnterprise Delivery.

Considerations

The aim of this guide is to demonstrate a barebones application that utilizes the YubiEnterprise Delivery API. The application should not be considered “production ready”. Below are a few of the considerations to keep in mind to ensure the success of your integration.

Policies to prevent abuse
This demo will allow a user to request shipment of as many keys as they desire. Additional logic will need to be built in to limit the number of shipment requests based on your requirements.

Selectable security Key
This demo is configured to order the YubiKey 5 NFC, and can be extended a variety of ways to allow different keys.

Error handling
There is one section in this guide that describes handling methods if an error is sent during the initial order. For a production deployment, there are a variety of different error cases that should be considered such as low inventory, shipment failure, undeliverable address, etc.

Auto-filling address
Currently this guide assumes that the user will be shipping their key to the address listed in ServiceNow. The catalog item may need to be extended to allow the user to input their personal address (for example, if they are not located at one of your main offices). You may want to consider leveraging the YubiEnterprise Delivery Verify Address API to allow your users to correct any address errors prior to submitting a shipment request.

Configuration based on your security requirements
This includes swapping the system out to use your identity provider, secrets management in AWS Lambda, and other controls used by your organization.
People and process impacts to customer service

If your application is intended for external end users then your internal CX team needs to be prepared to handle inquiries relating to YubiEnterprise Delivery/YubiKey. Either an internal team should be established and trained to handle these items OR you can engage Yubico Professional Services.

Multi-region PO support

The current demo is configured for a purchase order covering a single region. You will need to use the proper API token for the user’s region, e.g. North America / Canada is one region, EMEA is a different region and each have their own associated API token.

More information can be found here.

1.11.3 ServiceNow Integration

For an organization that has fully integrated YubiEnterprise Delivery into its own internal systems via the APIs, the fulfillment experience is streamlined: the end-user receives an email notifying them that they are eligible for a YubiKey and/or that they are required to use the key for specific system access. The email directs the end-user to the corporate fulfillment system (e.g., ServiceNow). For more information, see ServiceNow Integrations.

1.11.4 Setting up API Caller and Generating Token

With regard to the API token,

- Protect access to the API token, because whoever is in possession of the token is authorized to perform API operations for your organization.

- Accounts that use machine tokens should have the Admin role, not the Owner role. This reduces the risk if the token is compromised, since the token has only the permissions associated with its role.

- The fact that API tokens can easily be issued and revoked helps to assure the security of accounts that use machine tokens.

- To handle machine token expiry, we recommend using the API (/auth/machine-token) to renew the API token. Ideally, logic should be put in to renew by calling the API to get a new token before the existing one expires.

- If a user is removed from an organization and has a token in that organization, the token is revoked. If a user is suspended, all tokens are revoked. The tokens are left untouched if the user is reset or the password is reset.

- Before an API token expires, the system generates and sends a notification to the associated email address. The email notifies that the token will expire in 7 days/1day and will not be accepted by our system after that.

Step 1

Set up a sub-account for the application that will be calling the YubiEnterprise Delivery API. Detailed instructions for b and c below are given in Adding or Deleting an Org Member.

- Set up an email account for the application that will be calling the API. Ensure that you have access to it. The system automatically sends an email with login instructions to the new user.

- Use the YubiEnterprise Delivery Console (GUI) to create an account used solely by the API caller, for example, jan+api@example.com.

- Assign to the API caller’s account the YubiDelivery Admin role.

Step 2

Activate the new API-calling account by clicking the login link in the email and following the on-screen prompts.
YubiEnterprise Services

Step 3
Associate a YubiKey for the API caller account with the YubiEnterprise login credentials:

a. On the upper right of any YubiEnterprise Console page, go to the profile page of the API caller by clicking the initial for that account.

b. Click Manage login credentials and enroll a YubiKey as a roaming credential.

Note: Consider registering a second YubiKey in case the first YubiKey becomes unavailable due to loss or theft.

Step 4
Generate the API token:

a. On the YubiEnterprise Console Profile page, click Generate API token.

b. Make a copy of the token and store it in a secure location.

The token is displayed on the Console only at this time. Once you navigate away from the page you will no longer be able to view it.

Note: The API token is tied to an account AND an organization.

Authenticating with HTTP

The YubiEnterprise Delivery API supports the HTTP Bearer Authentication scheme. In order to authenticate with HTTP, you must provide your API token in the header of the request.

Copy your API token from its secure location and paste it into into a curl command in a bash script as shown below (the full token is not shown here).

```bash
curl "https://api.console.yubico.com/v1/inventory" \
  --header "Authorization: Bearer eyJhb..."
```

Once you are logged into YubiEnterprise Delivery, you can view the YubiEnterprise Delivery public API at https://console.yubico.com/apidocs.

1.11.5 Dates and Times

All dates and times in requests from the API are UTC in the RFC-3339 format.

1.11.6 Users, Roles, and Organizations

Since API tokens are scoped to organizations, if an organization is shipping YubiKeys to both United States/Canada and to Europe, two API tokens are required: one for the US/CAN organization and one for the European organization.

An individual user can have one role in one organization and the same or a different role in another organization; for example, user Jan could be an owner in a company’s US/CAN organization and an Admin in the same company’s EU organization. However, because these are separate organizations, if Jan is logged in to the US/CAN YubiEnterprise, Jan cannot use that login to perform operations in the company’s EU YubiEnterprise.

Because it is possible to change the role of a user already in an organization, it is worth noting that deleting a user both:

- Deletes that user’s association with the organization, and
• Removes from that user the permissions associated with their role.

It is therefore possible in theory (though undesirable) for a user to be a member of an organization without having a role.

To file a support ticket for YubiEnterprise Delivery, click Support.

1.12 Shipping Request Via API

Before starting, please review the information in Requesting Shipment: Introduction because it applies to executing shipment requests with the API (as well as to the other methods for making shipment requests).

Using the API you can make individual shipment requests or you can make shipment requests in bulk. This latter method requires the CSV file. Many of the necessary parameters are shared by the two methods. Instructions for filling out the shared fields as the system expects are set out below in the lettered sections (corresponding to the columns in the CSV file), whereas the general instructions for individual and bulk requests are set out in separate sections.

1.12.1 Verify Inventory Before Requesting Shipment

Verify that all the products you intend to ship are currently available in inventory.

• /shippablekeys returns all products associated with your organization’s account, including any products that have a current available inventory of 0.

• When inventory_type is 1, products that have zero inventory are not listed. The quantities of the products available are shown next to the names of the products. Therefore, even if a product is shown on a PO, if its inventory is exhausted by the time you want to request it be shipped, this API will not return it.

/inventory Example Output

```json
{
  "count": 3,
  "total_count": 3,
  "organization_product_inventory": [
    {
      "organization_product_inventory_id": "Cym9ypJsmVEshX9qz5Qc7S",
      "is_subscription_product": true,
      "is_virtual_product": true,
      "organization_id": "UEayb8v4LTHdAshpnk1gMd",
      "organization_product_quantity": 978,
      "product_id": 15,
      "inventory_type": 3,
      "product_name": "Primary Subscr - Adv. Tier: Initial",
      "product_tier": 2
    }
  ]
}
```

(continues on next page)
<table>
<thead>
<tr>
<th>organization_product_inventory_id</th>
<th>is_subscription_product</th>
<th>is_virtual_product</th>

<td>true</td>
<td>true</td>
<td>UEayb8vLTHdAshpnk1gMd</td>
<td>964</td>
<td>18</td>
<td>3</td>
<td>Primary Subscr - Prem. Tier: Initial</td>
<td>3</td>
<td>[1, 2, 3, 4, 5, 6, 7]</td>
</tr>
</tbody>
</table>
1.12.2 Individual Shipment Requests via API

To order keys via API from inventory purchased through channel partners, the new /shipments_exact APIs must be used. The APIs modified to handle channel partners are:

- GET /shipments_exact
- POST /shipments_exact
- GET /shipments_exact/{shipmentId}
- PUT /shipments_exact

The corresponding deprecated /shipments have not been modified and can only handle inventory purchased directly from Yubico.

**Example: Without Subscription**

For example, if you do not have a subscription and simply bought outright a number of YubiKey 5C Nanos (no virtual keys, no tiers), your request for a single shipment would look like this:

```
{
   "delivery_type": 1,
   "country_code_2": "US",
   "recipient": "string",
   "recipient_email": "string",
   "recipient_firstname": "string",
   "recipient_lastname": "string",
   "recipient_telephone": "string",
   "street_line1": "string",
   "street_line2": "string",
   "street_line3": "string",
   "city": "string",
   "region": "string",
   "postal_code": "string",
   "shipment_items": [
      {
         "product_id": 4,
         "inventory_product_id": 4,
         "shipment_product_quantity": 1
      }
   ]
}
```

**Example: With Subscription**

With a subscription, your product_id value and your inventory_product_id value would not coincide, and your individual shipment request would look like this:

```
{
   "delivery_type": 1,
   "country_code_2": "US",
   "recipient": "string",
   "recipient_email": "string",
   "recipient_firstname": "string",
   "recipient_lastname": "string",
   "recipient_telephone": "string",
   "street_line1": "string",
   "street_line2": "string",
   "street_line3": "string",
   "city": "string",
   "region": "string",
   "postal_code": "string",
   "shipment_items": [
      {
         "product_id": 4,
         "inventory_product_id": 4,
         "shipment_product_quantity": 1
      }
   ]
}
```

(continues on next page)
"recipient_firstname": "string",
"recipient_lastname": "string",
"recipient_telephone": "string",
"street_line1": "string",
"street_line2": "string",
"street_line3": "string",
"city": "string",
"region": "string",
"postal_code": "string",
"shipment_items": [
  {
    "product_id": 4,
    "inventory_product_id": 15,
    "shipment_product_quantity": 1
  }
]
}

1.12.3 Shipping Products to a Single Address

Use the /shipments_exact APIs for any new development and to update clients in existence prior to YubiEnterprise Delivery 1.6.0.

Specifying the stock/inventory to be used for an individual shipment request provides a much larger range of options than those available for bulk shipments.

Single Shipment Example Input

The following Curl example sends an HTTP POST to the shipments_exact resource URI to ship a YubiKey 5 NFC to a fictional employee, Jan Lindberg:

curl "https://api.console.yubico.com/v1/shipments_exact" \
  --header "Content-Type: application/json" \
  --header "Authorization: Bearer eyJhb...
  --data '{
    "delivery_type": 1,
    "country_code_2": "US",
    "recipient": "Example Inc.",
    "recipient_email": "jan.lindberg@example.com",
    "recipient_firstname": "Jan",
    "recipient_lastname": "Lindberg",
    "recipient_telephone": "555-5555",
    "street_line1": "7788 Foxrun Street",
    "street_line2": "",
    "street_line3": "",
    "city": "Dedham",
    "region": "MA",
    "postal_code": "02026",
    "shipment_items": [
      {"product_id": 3,
       "inventory_product_id": 15,
       "shipment_product_quantity": 1
      }
    ]
  }'"
In the example above, you will notice the `delivery_type` is set to 1 which means it is a normal shipment. A value of 2 would request an expedited shipment. The `recipient_email` gives the address at which the recipient will receive an email with the tracking number of the shipment.

```
1.12.4 Shipping Products to Multiple Addresses

The system chooses the stock (inventory) from which products are drawn.

**Example**

The following example of a Bash script calls Curl to upload a CSV file with multiple shipment requests. To scroll horizontally, click in the code box below.

```bash
#!/bin/bash

token="apitokengoeshere"

curl -F "file=@/path/to/file/bulk_shipment.csv" https://api.console.yubico.com/v1/
    shipments/bulkvalidate \
    --header "x-authorization: Bearer ${token}"
```

For instructions on creating and populating the CSV file, see *Bulk Upload: Shipping to Multiple Addresses*.

**Validating CSV Uploads**

<table>
<thead>
<tr>
<th>lines-in-file</th>
<th>Lines in the file, including header.</th>
</tr>
</thead>
<tbody>
<tr>
<td>lines_read</td>
<td>Lines that were able to be read in as CSV, excluding the header. Lines_read should thus be one less than lines_in_file</td>
</tr>
<tr>
<td>lines_parsable</td>
<td>Lines that passed basic validation. Lines_parsable + lines_not_parsable = lines_read.</td>
</tr>
</tbody>
</table>

**Example:** If a file that is not in the CSV format is uploaded, even if it had 100 lines, 0 lines would be read, because the CSV reader function cannot read the lines in as CSV.

**Example:** If a file has too many columns - i.e., more columns than the header row has - 0 lines would be read.
**Examples of Error Messages**

- InventoryType not set for Shipment, defaulting to 1
- DeliveryType not set for Shipment, defaulting to 1 - *normal*
- Wrong number of fields

**1.12.5 Bulk Shipment Requests via API**

Bulk orders using the API are still handled through the following APIs:

- GET /shipments/bulk
- POST /shipments/bulk
- POST /shipments/bulkvalidate
- POST /shipments/bulkdelete

The API parameters and request body themselves did not change to work with channel partners. Instead, it is the content of the .csv file used in the upload that has been changed to include the new **channel_partner_ID** field. The channel partner ID is a non-zero integer shown as a field on the purchase order table and on the purchase order details page.

**Note:** To ensure you are using the latest .csv file format, download the template file each time you prepare to upload a new batch of shipment requests.

**Shipment Request Fields in CSV File**

Use the CSV file for bulk shipments via API.

**Note:** Although Console users can specify the inventory they want to draw from for individual shipment requests, this option is not available for bulk shipments. Bulk shipment requests for Subscription (1.0) allow only the selection of initial, replacement, or buffer stock. When inventory is not specified or cannot be specified, the system uses the “first in, first out” rule, which means it will deduct from the oldest purchase order first.

In the table below, all fields not marked as mandatory are optional. The **Limit** column displays the maximum number of alphanumeric characters permitted per field/table cell.

**Table 11: Shipment Request Fields**

<table>

</tr>
<tr>
<td>Security Key C NFC by Yubico - Enterprise Edition</td>
<td>Number of keys to be shipped</td>
<td>3</td>
</tr>
</tbody>
</table>

Note: To find out if an address is deliverable, make a shipment request and see what status code or message it gets. Deliverability is determined by our shipping partners, and it is their codes and messages we display when it comes to questions of deliverability. For a fuller explanation, see Troubleshooting.
C. and D. Names

First Line

In the Console, **First name** and **Last name** and in the CSV file, `recipient_firstname` and `recipient_lastname` map to the first line on the shipping label.

Long recipient names can be problematic for all methods of requesting shipment, because the shipment request will fail if the contents of the **First name** / **Last name** fields and/or **Company** or **recipient** fields exceed the maximum number of characters permitted in these fields (shown in the table below). **Workaround**: When a recipient’s full name or company name exceeds the fields’ maximum lengths, split the names across the three fields, for example:

<table>
<thead>
<tr>
<th>Location</th>
<th>Field (limit=15)</th>
<th>Limit</th>
<th>Field (limit=20)</th>
<th>Limit</th>
<th>Field (limit=20)</th>
<th>Limit</th>
</tr>
</thead>
<tbody>
<tr>
<td>API</td>
<td>recipient_firstname</td>
<td>15</td>
<td>recipient_lastname</td>
<td>20</td>
<td>recipient</td>
<td>20</td>
</tr>
<tr>
<td>CSV</td>
<td>recipient_firstname</td>
<td>15</td>
<td>recipient_lastname</td>
<td>20</td>
<td>recipient_company</td>
<td>20</td>
</tr>
<tr>
<td>Console</td>
<td>First name</td>
<td>15</td>
<td>Last name</td>
<td>20</td>
<td>Company</td>
<td>20</td>
</tr>
</tbody>
</table>

**Example of an overly long name before adjustment to fit the fields**

<table>
<thead>
<tr>
<th>Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>Johannes-Maximilian von Derschowitz-Dampfloch zu Querdenker</td>
</tr>
</tbody>
</table>

**Example after adjustment**

<table>
<thead>
<tr>
<th>Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>Joh.-Maximilian v.DerschowitzDampfloch zu Querdenker</td>
</tr>
</tbody>
</table>

Second Line

The second line on the shipping label maps to the name of the recipient’s company if the address is not residential. For example, the system’s address verification function recognizes that Yubico’s Santa Clara facility is in a commercial building, therefore the company name is expected in:

- The **Company** field in the Console
- The **recipient_company** column in the CSV.
- The **recipient** field in the API

**Note:** API: Do not use the `/shipments recipient` field to specify the **name of the individual** to whom products are to be shipped. For this, use the `recipient_firstname` and `recipient_last_name` fields instead.

If the address is residential, leave empty:

- The **Company** field in the **Console**
- The **recipient_company** cell in the CSV file
- The **recipient** field in the API.
Examples of Bad Usage of Company Name Field

For example, entering the following information for a shipment request would result in failure because USPS recognizes that there are multiple companies in the building whose address is 530 Lytton Avenue:

<table>
<thead>
<tr>
<th>Name</th>
<th>Address</th>
<th>City, State, Zip</th>
<th>Country</th>
</tr>
</thead>
<tbody>
<tr>
<td>Jan Lindberg</td>
<td>530 Lytton Avenue</td>
<td>Palo Alto, CA 94301</td>
<td>USA</td>
</tr>
</tbody>
</table>

Similarly, entering the following information for a shipment request would result in failure because a residential address would not be associated with a company.

<table>
<thead>
<tr>
<th>Name</th>
<th>Company</th>
<th>Address</th>
<th>City, State, Zip</th>
<th>Country</th>
</tr>
</thead>
<tbody>
<tr>
<td>Jan Lindberg</td>
<td>Yubico Inc.</td>
<td>6 Lea Rd</td>
<td>Dronfield S18</td>
<td>UK</td>
</tr>
</tbody>
</table>

E. Post Office Boxes

Although the system can deliver to Post Office (PO) Boxes within the United States, delivery to the equivalent elsewhere in the world is unlikely to succeed.

I. Region/State

USPS Codes for US and Canada

For shipments going to the US and Canada, the region field requires the standardized two-letter USPS code. These codes are listed below.

<table>
<thead>
<tr>
<th>State (US) / Province or Territory (Canada)</th>
<th>Code</th>
</tr>
</thead>
<tbody>
<tr>
<td>Alabama</td>
<td>AL</td>
</tr>
<tr>
<td>Alaska</td>
<td>AK</td>
</tr>
<tr>
<td>Alberta</td>
<td>AB</td>
</tr>
<tr>
<td>Arizona</td>
<td>AZ</td>
</tr>
<tr>
<td>Arkansas</td>
<td>AR</td>
</tr>
<tr>
<td>British Columbia/Colombie-Britannique</td>
<td>BC</td>
</tr>
<tr>
<td>California</td>
<td>CA</td>
</tr>
<tr>
<td>Colorado</td>
<td>CO</td>
</tr>
<tr>
<td>Connecticut</td>
<td>CT</td>
</tr>
<tr>
<td>Delaware</td>
<td>DE</td>
</tr>
<tr>
<td>District of Columbia</td>
<td>DC</td>
</tr>
<tr>
<td>Florida</td>
<td>FL</td>
</tr>
<tr>
<td>Georgia</td>
<td>GA</td>
</tr>
<tr>
<td>Hawaii</td>
<td>HI</td>
</tr>
<tr>
<td>Idaho</td>
<td>ID</td>
</tr>
<tr>
<td>Illinois</td>
<td>IL</td>
</tr>
<tr>
<td>Indiana</td>
<td>IN</td>
</tr>
</tbody>
</table>

YubiEnterprise Services

L. Telephone Number

It is mandatory that the recipient_telephone field be populated. This is the number at which the recipient of the shipment can be reached, designated on the Console as **Contact Phone**.

The permissible content of this, [+()\-0-9\s]+, should match regular expressions.

For /v1/shipments_exact the API validates the existence of recipient_telephone in the request body. For CSV upload via /v1/bulkvalidate, the API validates the existence of recipient_telephone on each row. In both cases, if the country code is IN, the limit is 255 of the alphanumeric characters specified above while all other country codes limit recipient_telephone to 40.

M. Delivery Type

ShipmentDeliveryTypeEnum specifies the method of shipping:

- 1 - Normal (standard) shipping (default)
- 2 - Expedited (rush) shipping.

N. InventoryType

The inventory_type requires one of the values given in the **Inventory Types (Stock)** table below.

<table>
<thead>
<tr>
<th>Product or Inventory Name shown on Purchase Order</th>
<th>Value to use for inventory_type</th>

<td>5</td>
</tr>
</tbody>
</table>

- Customers who have purchased Subscription (2.0) will be selecting only Inventory Type 3 or 5.
- If you have purchased keys on the perpetual mode and/or lanyards, use Inventory Type 1.
- If you are not a subscription customer, but have purchased one or more tiers of virtual keys instead of physical keys, use Inventory Type 2.
- Subscription (1.0) customers: Use Inventory Types 3, 4, and/or 5.

Table 14: **Stock: Initial, Buffer, Replacement**

<table>
<thead>
<tr>
<th>Initial</th>
<th>The stock in this category reflects the total number of users on the subscription. This lot can be drawn upon for 12 months from the start of your subscription term.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Buffer</td>
<td>This category is made available to you free of charge when your subscription begins. You can draw on it throughout the term of your subscription.</td>
</tr>
<tr>
<td>Replacement</td>
<td>This category is intended for those who have lost their YubiKeys or want to upgrade. The stock in this category is reset each year of the subscription to the Replacement limit.</td>
</tr>
</tbody>
</table>

- Use up all of your Inventory Type 3, Initial, within the first year of your subscription.
- Use Inventory Type 4 at any time: Buffer stock expires only at the end of your subscription term.
- Use Inventory Type 5, Replacement, for users who have lost their keys or want to upgrade. Any keys not used in a given year are forfeited at the end of that year.
O. Channel Partners

To order keys via API from inventory purchased through channel partners (distributors/resellers), the new /shipments_exact APIs must be used; see Deprecated APIs below. The older, deprecated /shipments API only supports ordering keys from inventory purchased directly from Yubico.

The following APIs related to bulk shipments have been updated to handle channel partners:

- POST /shipments/bulk
- GET /shipments/bulk
- POST /shipments/bulkvalidate
- POST /shipments/bulkdelete - For the sake of completeness, this is included in the list, but it has not changed.

The GET /shipments/csv API will also be updated to support channel partners.

Product ID and Inventory Product ID

The product_id is the unique identifier for the product, e.g., 4 is the YubiKey 5C Nano. The inventory_product_id can be thought of as the ID for a “bucket” containing credits that your organization bought to cover the purchase of keys, lanyards, etc. Typically organizations with subscriptions have multiple “buckets”, while organizations without a subscription might have only a single “bucket.”

Both product_id and inventory_product_id are mandatory fields.

Use the inventory_product_id to specify which inventory you are pulling from. The inventories correspond exactly to:

- The inventories shown on the YubiEnterprise Console Dashboard and
- The options in the Choose from stock dropdown on the Single shipment tab accessed by clicking Create Shipment Request on the Shipments screen.

The Stock/Inventory table below lists both product_id and inventory_product_id in the same column, and contains all inventories and products except custom products.

- To get the complete list of products and inventories available to your organization, make a call to GET /inventory.
- If you have custom products, calling GET /inventory will return a list that also contains your custom products (see also Custom-programmed YubiKeys).
- When making requests, use the /inventory end point to find the product_id to use for that and/or inventory_product_id.

Note: The inventory_product_id can have the same value as the product_id field in the individual inventory_records.

### Custom-programmed YubiKeys

If your organization has custom-programmed YubiKeys, to make a shipment request, use the `/inventory /products` APIs to get the `inventory_product_id` and `product_id`. Using standard `product_id` codes in shipment requests will result in errors.

### Error Messages

#### In the API

The following response is sent if `recipient_telephone` is not included in the request to create shipment at `shipments_exact` as per POST `/v1/shipments_exact`:

```plaintext
400 Bad Request {
  code: 'validation_error',
  message: 'We were unable to create the shipment',
  errors: [
    {
      field: 'recipient_telephone',
      message: 'recipient_telephone is a required field'
    }
  ]
}
```

#### In the CSV

When uploading a CSV file with no `recipient_telephone` provided in one or more rows:

```plaintext
YRIEIXLECHAT-01:shipments yrieix.lechat$ cat my-shipments.csv
Country code,Company,First name,Last name,Address 1,Address 2,Address 3,City,Region/State,Postcode,RecipientEmail,RecipientTelephone,DeliveryType,InventoryType,ChannelPartnerId,YubiKey 5 NFC,YubiKey 5 Nano,YubiKey 5C,YubiKey 5C Nano,YubiKey 5Ci,Security Key NFC by Yubico,YubiKey FIPS,YubiKey Nano FIPS,YubiKey C FIPS,YubiKey C Nano FIPS
US,My Company,Yrieix,LeChat,123 Home Ave,,,Brooklyn,NY,11111,y.lechat@yubico.com,,Normal,1,1,0,0,0,0,0,1,0,0,0,0
YRIEIXLECHAT-01:shipments yrieix.lechat$ curl -v -s -X POST -H "Authorization: Bearer ...
```
To file a support ticket for YubiEnterprise Delivery, click Support.

1.13 Shipment Requests via API: Listing, Tracking, Searching, Status, etc.

1.13.1 Listing Shipment Requests

There is a 100-record limit on all API calls. To illustrate, using /shipments_exact to retrieve a list of all shipments would be unsuccessful unless there were only one hundred or fewer shipments, as only the first 100 records are returned.

Note: The /shipments_exact{id} route returns the shipment type (‘Automated’ or ‘Manual’) as part of the response. The field is sortable. The /shipments/search-description route returns the Type field as a filterable field.

Obtaining Further Records

In cases where there are more than 100 shipments, iterate through the shipments based on the number of shipments provided by the total_count parameter.

Use the optional parameters to obtain more records. For example:

```bash
// get the first 100
/shipments_exact?limit=100&offset=0

// get the second 100
/shipments_exact?limit=100&offset=100
```

(continues on next page)
1.13.2 Single Shipment Request Tracking Example

A successful response from the `shipments_exact` resource will include a `shipment_id` which can be used to get the tracking information for this shipment request.

```json
{
    "shipment_id": "U89bvfKKCtQfhnqaFBrAZW",
    "shipment_items": [
        {

    "delivery_type": 1,
    "shipment_state_code": "ShipmentStateAwaitingValidation",
    "shipment_state_id": 3,
    "shipment_state_message": "Awaiting Validation",
    "shipment_summary_description": "Total Keys: 16 yk5c:16",
    "shipment_request_date": "2020-12-10T19:56:57Z",
    "shipment_updated_date": "2020-12-10T19:56:57Z",
    "total_keys_shipped": 16
}
```
### 1.13.3 Tracking a Shipment Using the shipment_id

```bash
curl "https://api.console.yubico.com/v1/shipments_exact/Bj4pfrBJ1SCvkTbTP88Ak2" \
--header "Content-Type: application/json" \
--header "Authorization: Bearer eyJhb..."
```

### 1.13.4 Search

Some of the lines of code are very long, so it may be necessary to click in the line and scroll horizontally.

You can get a list of shipments filtered by query parameters. We introduced /search-description on searchable resources to provide a description of the searchable fields. To look up a shipment using the parameter “Shipping error, contact support” state, for example, set the search_field to shipment_state_id and set the ID to 99, which is the ID for that shipment state. (See the Shipment Status Codes table below for explanations of the various shipment states.)

**Example**

```bash
curl "https://api.console.yubico.com/v1/shipments_exact?search=99&search_field=shipment_state_id" \
--header "Content-Type: application/json" \
--header "Authorization: Bearer eyJhb..."
```

**Advanced Search**

To enable advanced search, add the query string parameter &advanced_search=true. Note that the &search query parameters will need to respect a different structure: search=field_name::operation_type::value. An example search with curl (--data-urlencode is used because many characters introduced are illegal in the old query string, such as : and |):

```bash
curl -H "$YED_AUTHORIZATION" -G --data-urlencode 'search=shipment_request_date::range::2020-05-10T00:00:00Z|2020-12-10T00:00:00Z' --data-urlencode 'search=organization_name::like::alpha comp' --data-urlencode 'search=organization_name::exact::demo_org' 'http://api.console.local/v1/shipments_exact?offset=0&limit=10&sort_by=shipment_request_date&sort_direction=DESC&advanced_search=true'
```

This is the encoded URL.

```
GET /v1/shipments_exact?offset=0&limit=10&sort_by=shipment_request_date&sort_direction=DESC&advanced_search=true&search=shipment_request_date%3A%3Arange%3A%3A2020-05-10T00:00:00Z%7C2020-12-10T00:00:00Z&search=organization_name%3A%3Alike%3Aalpha%20comp&search=organization_name%3A%3Aexact%3Ademo_org HTTP/1.1
```

Fields with different names will be searched in an AND, while fields with the same name will be ORed, so the resulting query fragment will be:

```
WHERE (shipment_request_date BETWEEN ? AND ?) AND ((organizations.organization_name = ?) OR (organizations.organization_name LIKE ?)) ORDER BY shipment_request_date DESC LIMIT ?
```

with the following array to fill in the ? in the fragment:
Note: The old search will continue to work as before.

1.13.5 Filtering and Pagination

Refer to the API docs for the GetShipmentsExact operation.

1.13.6 Status

Shipment Status Codes

A shipment request can be edited at any of the states between 1 and 9. From this point on, a shipment request is either processed through to an end state, or set back to state 99.

For information on how address validation affects the success of a shipping request, see the Troubleshooting chapter.

Note: As the following table is wide, you might need to scroll horizontally to see all columns.
<table>
<thead>

</tbody>
</table>
YubiEnterprise Services

(1) Refer to Timing for cutoff times.

(2) Incomplete Address: Secondary line information such as apartment (apt), suite, unit is missing. Therefore it is not possible to guarantee delivery to the correct recipient.

(3) Address is Undeliverable or could not be understood: The address is either not physically deliverable or it could not be resolved to a real location.

(4) Any shipping request with a recipient name and/or address found on the US government's DPL (Denied Parties/Persons List) cannot be fulfilled.

Shipments Status Messages

Scroll horizontally to see the entire width of the table.

These error messages accessible via the API tell you why a given shipment request was unsuccessful. It is worth reviewing them before making any shipping requests in order to see what sort of issues might arise and thereby avoid them in the first place.

Note: As the following table is wide, you might need to scroll horizontally.

In the Explanation column, the source of the message is given: YubiEnterprise Delivery system for internal messages, US Validation for the US Postal Service, and finally, International Validation. Messages originating from the last two are simply passed on to you by YubiEnterprise Delivery.

1.14 API: Best Practices and FAQs

The following best practices are specific to API use; those not specific to the API are in General FAQs and Best Practices and Troubleshooting.
1.14.1 Control Access to your Accounts

- Protect access to the API token, because whoever is in possession of the token is authorized to perform API operations for your organization.
- Accounts that use machine tokens should have the Admin role, not the Owner role. This reduces the risk if the token is compromised, since the token has only the permissions associated with its role.
- The fact that API tokens can easily be issued and revoked helps to assure the security of accounts that use machine tokens.
- To handle machine token expiry, we recommend using the API (/auth/machine-token) to renew the API token. Ideally, logic should be put in to renew by calling the API to get a new token before the existing one expires.
- If a user is removed from an organization and has a token in that organization, the token is revoked. If a user is suspended, all tokens are revoked. The tokens are left untouched if the user is reset or the password is reset.
- Before an API token expires, the system generates and sends a notification to the associated email address. The email notifies that the token will expire in 7 days/1 day and will not be accepted by our system after that.

1.14.2 Lifecycle Management

API tokens expire precisely one year after generation. Since a user can have only one API token at a time, you must have a plan to roll-over to a new API token before the old one expires.

Notification of API Token Expiry

The system automatically emails notification that the API token will expire:

- 7 days beforehand
- 1 day beforehand
- on the day of expiry.

Notification is emailed to:

- the user / holder of the API token
- Org owner (in cc)

Revoking and Deleting an Active API Token

An account can have 0 or 1 API access (machine) tokens. Once you have a token, it must be revoked and deleted before you can get a new one - even if the old one has expired.

API

The GET /auth/machine-token request revokes any existing tokens and creates a new machine token. This could therefore cause outages. GET in this instance is not a safe idempotent operation.

Console

While logged in to YubiEnterprise Delivery Console as the user with the relevant API token, go to the profile page by clicking on the profile icon on the top right. Click Revoke and delete active API token. Once you revoke and delete the old token, the button to generate a new token appears.
1.14.3 API: FAQ

Q. Who should use the API?
   A. Customers of YubiEnterprise Delivery.

Q. Does Yubico charge for API calls?
   A. No.

Q. How do I get access to the API?
   A. Get login credentials from the YubiEnterprise Delivery account owner in your organization, and see Onboarding Workflow.

Q. How do I set up an account to call the API?
   A. After you have been given a YubiEnterprise Delivery account, follow the instructions in API Onboarding Playbook.

Q. How do I test the API?
   A. In the API Onboarding Playbook in the current guide, see YubiEnterprise Delivery Self-Service Web Portal and ServiceNow Integrations.

Q. How do I revoke an API token?
   A. See Revoking and Deleting an Active API Token above.

Q. Where do I go if I need help?
   A. Get help now from our support team: to file a support ticket for YubiEnterprise Delivery, click Support, or reach out to the customer success representative who was assigned to your company.

Q. Can I get notification of YubiEnterprise Delivery API changes?
   A. Subscribe to the Yubico Developer Program mailing list. Go to https://www.yubico.com/why-yubico/for-developers/developer-program/. Although this page looks as if it is just for a coupon, it is actually the sign-up page for the mailing list.

Q. Does the country code look-up API return the countries to which Yubico can ship, or does it return all countries in the world?
   A. It returns all the countries in the world. Currently we can ship only to the countries named in Delivery Policies.

Q. Do I need to validate addresses via the API prior to submitting them?
   A. “Pre-qualifying” the address does not eliminate the address validation step. Every shipping request is sent for address validation. Status is updated when address validation is complete. Once the request reaches the “Accepted for Fulfillment” status, it has passed the address validation phase. If the status is “Incomplete Address”, edit or delete the request. See Reviewing Incompletes.

To file a support ticket for YubiEnterprise Delivery, click Support.
1.15 ServiceNow Integrations

1.15.1 Introduction

ServiceNow IntegrationHub is a centralized location to build and manage integrations. It is made up of a series of “spokes,” self-contained, scoped applications that contain all of the artifacts that make up an integration, primarily “Actions”.

With the aid of the following example, we will demonstrate how to integrate the YubiEnterprise Delivery API into a ServiceNow spoke in order to enable your end users to order YubiKeys from your organization’s inventory with just a few clicks.

This guide will cover:

1. How to add a YubiKey to your service catalog
2. How to configure your form to send a request to the YED API to create a shipment
3. How to send shipment tracking information to your end user

1.15.2 Step-by-step Guide

The YubiEnterprise Delivery for ServiceNow Tutorial will walk you through configuring your custom spoke.

Considerations

The aim of this guide is not to create a production-ready prototype, but instead to familiarize you with ServiceNow and the method of integrating it with YubiEnterprise Delivery. Below are a few of the considerations to keep in mind to ensure the success of your integration.

Policies to prevent abuse

This demo will allow a user to request shipment of as many keys as they desire. Additional logic will need to be built in to limit the number of shipment requests based on your requirements.

Selectable security Key

This demo is configured to order the YubiKey 5 NFC, and can be extended a variety of ways to allow different keys.

Error handling

There is one section in this guide that describes handling methods if an error is sent during the initial order. For a production deployment, there are a variety of different error cases that should be considered such as low inventory, shipment failure, undeliverable address, etc.

Auto-filling address

Currently this guide assumes that the user will be shipping their key to the address listed in ServiceNow. The catalog item may need to be extended to allow the user to input their personal address (for example, if they are not located at one of your main offices). You may want to consider leveraging the YubiEnterprise Delivery Verify Address API to allow your users to correct any address errors prior to submitting a shipment request.

To file a support ticket for YubiEnterprise Delivery, click Support.
1.16 Purchase Orders

The Purchase Orders tab displays the purchase orders (POs) that have been submitted for both products and delivery shipping credits.

**Note:** POs are not made from the YubiEnterprise Delivery Console, but instead by contacting your Yubico sales representative or your channel partner.

The Purchase Orders tab lists your order information as shown in the example in the screenshot below:

View the subscription tiers and number of licenses for products you currently have in inventory by clicking on the PO number to display the PO detail view (see *PO Detail View*). This information is also shown on the Dashboard:
Available subscription 1.0 licenses

The subscription tiers are listed and explained in *Modes of Purchase.*

**Note:** If you want to identify the PO that applies to a particular inventory, be aware that unless the PO is ONLY for that item, you will not be able to find it by filtering on the Status column. In other words, it is not possible to filter on the status of inventory that has been exhausted if its PO contains more than one product. For example, even if you do not have any keys left in a Backup subscription Premium tier, if that purchase is included in a PO with a Primary subscription Advanced tier that has not yet been exhausted, the PO status will be displayed as **Available for shipment.**

### 1.16.1 Customer View: Purchase Order Tab Column Headings

- **Order date** Date on which the order was received.
- **Purchase order number** (PO number) This is a link to a *PO Detail View* showing what was purchased and your existing inventory. If you purchased from a channel partner, unit prices are not shown.
- **Distributor** or **Reseller** name This field is empty if you purchased directly from Yubico.
- **Contact** Name on the PO.
- **Status** Whether available for shipping or not. As shipping requests are processed, inventory and shipping credits will be depleted.
  - **Available for shipment** - you have products in inventory

**1.16. Purchase Orders**
YubiEnterprise Services

- **Order consumed** - all products purchased have been shipped
- **Order Expired, contact sales** - the PO expired before the keys were shipped, so you should contact your Yubico sales person.

- **YE Delivery** Whether the inventory can be shipped using YubiEnterprise Delivery (YES/NO).

### 1.16.2 Purchase Order Tab Table Controls

**Columns**

To determine which columns will be shown and/or to hide or show them, click on **Columns** in blue, below the **Search** field.

![Columns](image)

**Filters**

To determine which filters will be used, click on **Filters** in blue, below the **Search** field. The operators are **contains** or **equals**.
Density

To determine how the information on the Purchase orders tab will be shown, click on Density in blue, below the Search field to select from the Compact, Standard, or Comfortable options.

1.16.3 PO Detail View

For more information about a PO, click on its Purchase order number. As in the screenshot at the bottom of this section, the PO detail view shows:

- The Purchase order #
- The NetSuite sales order number (internal)
- The Order date
- The channel partner name: Distributor or Reseller (To find out why you would see one or the other depending on your own role, see Roles/Permissions)
YubiEnterprise Services

- The Distributor or Reseller ID
- The product inventory. In the case of subscriptions, this is expressed as the name of a tier, as shown in the example below.
  - Number shown in bold indicates the number of subscriptions available out of the number of subscriptions purchased (number not bolded).
  - If the purchase was direct (not through a channel partner), the unit price per item is shown.

PO Detail View: customer view, purchased through reseller

To file a support ticket for YubiEnterprise Delivery, click Support.

1.17 User Management

The initial Console Owner for YubiEnterprise Services is set up by YubiEnterprise Services customer support. That owner in turn sets up other users of the application (Console Owners, Admins, and Auditors) in their organization.

Ensure your organization has at least two Console Owners. That is the only role that can perform password and account resets for users who have been locked out. If your organization has only a single Console Owner and that person locks themselves out or leaves your organization, you must contact Yubico to set up a new Console Owner. This is an onerous process that is likely to delay your shipment requests.

Each user in an organization has a single account, the username for which is their email address. Via email, the user is asked to complete the setup of their account by setting a password and registering a YubiKey (the WebAuthn credential). For more details, see Onboarding Workflow.

In the case of a multinational organization shipping YubiKeys to both the EU and the US, two separate organizations will be set up. Even if the same person is the Org Owner for both, there is a separate account for each.
1.17.1 Overview

What you see on the **Settings > Users** tab depends on your role.

### Customer View, Settings Page

**Customer: Users Tab Column Headings**

- **Email** - Email address used to log in to the YubiEnterprise Console (limit of 255 alpha-numeric characters)
- **Roles** - Console Owner/Console Admin/Console Auditor, Reseller, Distributor
- **Last login** - Expressed in terms of period in the past, for example, “2 years ago”
- **State** - *User Account States*
- **MFA** - Multi-factor authentication in use (tick) or not (x)
- **Password** - Password set (tick) or not (x)
- **Edit / Delete** - Icons for each entry

### Distributor View, Settings Page

**Distributor: Resellers Tab Column Headings**

**1.17. User Management**
• **Reseller** - Name of reseller to which Yubico products were sold by distributor

• **View purchase orders** - Toggle to determine whether reseller (plus their end customer) has access to purchase order data

---

**Reseller View, Settings Page**

**Reseller: Customers Tab Column Headings**

• **Customer** - Name of customer to which Yubico products were sold by reseller

• **View purchase orders** - Toggle to determine whether customer has access to purchase order data

**Distributor / Reseller: View Purchase Orders Toggle**

Distributors and resellers can decide whether to revoke YubiEnterprise Console access to purchase order information. If a distributor disables access for one of their resellers, then neither that reseller nor their customers can see inventory. If a reseller disables access for one of their customers, then the end-customer cannot see inventory.

---

**Reseller and Distributor View, PO Toggle Dialog**

---

**1.17.2 Roles/Permissions**

**Overview**

In addition to the Console Owner role, Console Admin and Console Auditor roles that together make up the org members, there are Customer, Reseller and Distributor roles. These latter three roles should be considered viewing permissions.

Any of the first three roles can also have the Customer, Reseller and/or the Distributor roles. As described in Step 1 of the Onboarding Procedure, Resellers and Distributors ("channel partners") typically use YubiEnterprise Delivery to view and manage their customers’ inventories rather than to request shipment.
Because each of the “viewing roles” (Distributor, Reseller, Customer) have different interests, their perspectives are clearly labeled, as shown in the screenshot below:

Selections Available to User with All Viewing Roles

The person logged into the Console can select the viewing role to suit their purpose - if that logged-in user has other roles to choose from.

Distributors and Resellers can determine whether their customers are able to use YubiEnterprise Delivery.

Distributor’s View of Purchase Orders Tab

Therefore these channel partners are able to verify what their customers see.

If a distributor grants YubiEnterprise Delivery access to the reseller to which they have sold Yubico products (including the use of the Console), that distributor would be able to select Reseller as well as Distributor from the dropdown illustrated above. The distributor can see the product prices they charged the reseller and vice versa.

If the reseller grants YubiEnterprise Delivery access to an end customer, the customer does not see what the reseller paid the distributor for the products.

Note: If a customer has purchased inventory directly from Yubico, and from a distributor, and from a reseller, that customer can see all three ‘buckets’ of inventory. Similarly, a distributor can see which resellers have purchased from it as well as the respective inventories, but the distributor would not be able to see if other distributors supply those resellers through YubiEnterprise Delivery. Each “chain” (or set of relationships) “Distributor > Reseller > Customer” is unique.

An example view is shown at the bottom of the PO Detail View section, “PO Detail View: customer view, purchased through reseller”. The green view label, Customer, under the name of the organization, “products test” tells us that the viewer’s role is that of an end-customer. Because that customer did not place the PO directly with Yubico (we can see that the Reseller is “test channel partner”), the price of the products is not shown. Only the actual purchaser of the
products would see the price. In other words, if the reseller had purchased through a distributor, only the latter would see the product price paid.

The permission levels of the different org members are set out in the table below. Distributor and Reseller roles are not included in the table because theirs are only viewing permissions, whereas the Customer role must also have either the Console Owner, or Console Admin or Console Auditor role.

<table>

</tbody>
</table>

**Reseller Role**

The Reseller role is assigned to an organization that sells Yubico products to end-users. As a user with the Reseller role, in order to efficiently manage and monitor the end-customers’ inventory and product information associated with your reselling activities, you can select an end-customer from your list and view the End Customer dashboard in the Console.

For the Reseller, the end-customer dashboard view displays the following information, specifically for the inventory that comes from POs purchased through this reseller (if the end-customer has POs purchased through other resellers, that information will not be displayed):

- Perpetual/Standard inventory
- Non-subscription inventory
- Subscription inventory
- The number of each product purchased
- The number of each product remaining to be redeemed/shipped
- For virtual tiers (e.g., Advanced or Compliance), the models that the end-customer can order (their custom product redeem for any purchased tier)
- A table with that end-customer’s most recent POs.
Distributor Role

The Distributor role is assigned to an organization that sells Yubico products to Resellers. As a user with the Distributor role, in order to efficiently manage and monitor the end-customers’ inventory and product information associated with distribution activities and Reseller network, you can view the end-customer dashboard in the Console when selecting an end-customer from a Reseller’s list.

The End Customer dashboard view displays the following information for the inventory that comes from POs purchased through this distributor (if the end-customer has POs purchased through other distributors, that information will not be displayed):

- Perpetual/Standard inventory
- Non-subscription inventory
- Subscription inventory
- The number of each product purchased
- The number of each product remaining to be redeemed/shipped
- For virtual tiers (e.g., Advanced or Compliance), the models that the End Customer can order (their custom product redeem for any purchased tier)
- A table with the most recent purchase orders of that End Customer.

Customer Role

A customer must have one org member role (Console Owner, Console Admin, or Console Auditor) and may have one or both of the Distributor and Reseller roles. For example, Acme Corp might function as a distributor for Resi Corp (which is a reseller) and a reseller for End Corp (which is an end-customer) - and in addition, Acme might have its own YubiEnterprise Delivery account to order keys for its own employees. Acme might assign all three roles to its employee Jan Lindemann, although it is more likely that Acme would assign the Distributor role, the Reseller role and the Console Owner (customer) role to different employees.

For customers, the names and email addresses of the org members are displayed on the Users tab of the Settings page. All customers can view the role and email address of each org member, as well as the roles assigned to them.

Note: Only the end customer can view the Personally Identifiable Information (PII) entered for creating shipment requests. Neither the distributor nor the reseller can view the PII entered by their end customers for creating shipment requests.

In order to view Personally Identifiable Information (PII), new and existing users must accept the applicable terms and conditions when they log in for the first time after the release of YubiEnterprise Services 2.4.0.

1.17.3 User Account States

All YubiEnterprise Services users have one of the following account states. To locate a user’s account state, go to the Settings tab and click on Users. Locate your desired user, and check the State column to view the user’s account state.

**Invited**

The user has been emailed a login link for the system, but they have not yet done so and thereby activated their account. Most users have this state initially.

**Active (demo mode)**

The user has activated their account, but they have not yet registered a WebAuthn credential such as a YubiKey. Console activity is restricted to the activities described in Onboarding Workflow.

1.17. User Management
Active
The user has activated their account and registered a WebAuthn credential.

Account Reset
An Org Owner would do this if a user’s account had been compromised. The user state is displayed as “Account Reset” until the user follows the instructions in the Account Reset email the system sends.

Deactivated
The user has been removed from all orgs, and they can no longer log in to the Console. All associated access tokens have been revoked. Org Owners can add the user to the org again at a later date.

Suspended
If a user becomes a security concern, disable system access for that user by contacting YubiEnterprise Support to have the user suspended. Any API token the user has is deleted, and their login credentials are temporarily invalidated.

- If a suspended user tries to log in, they get the “userID/password invalid” message.
- Only Yubico can suspend a user and only Yubico can lift such a suspension.
- Although all access tokens are revoked, the user remains associated with their org, so that if the suspension is lifted, org owners are not required to recreate the affected user.
- All owners of the suspended user’s org receive an email notifying them that this user is suspended and they must contact YubiEnterprise Support to have the suspension lifted.

1.17.4 Downloading Org Member Details Spreadsheet

Org Owners can download a list of all the Org Members and their details in the form of a spreadsheet by clicking Download CSV from the Users tab of the Settings screen.

1.17.5 SSO: Single Sign-On

Single sign-on (SSO) is an authentication method that enables users to use a single set of credentials to access multiple applications and services securely. Employers frequently use SSO to safeguard their resources and streamline work processes by enabling employees to access a whole range or subset of applications and platforms without having to log in to each one separately. Most employees of an enterprise have already encountered SSO by logging in to a service provider using the enterprise’s Identity Provider (IdP), for example, Azure AD, Google for Workgroups, or Okta.

YubiEnterprise Services supports SSO. For an organization with SSO enabled, users do not have to register. Although they are added the same way as non-SSO-enabled users, instead of remaining in the Pending state until they follow the emailed instruction to register a security key, they are immediately added to the organization in the Active state. They can therefore use the service-provider-initiated login link to log in to the Console. For details, see Single Sign-On (SSO).

1.17.6 Managing Your Own Profile

To manage your own login credentials and API tokens, click on the profile icon (the green button with your initials) on the top right of any page. The profile page appears, showing your username and a button for each option.

If you have login credentials for more than one organization, the Authentication field lists those organizations. To change from one organization to another, click on the name of the desired organization.
Managing Login Credentials

**Important:** There is no going back if you click **Manage Login Credentials**: you *must* enter your current password. If you do not know your password, you will be automatically logged out immediately, and you will need to request a new password from your administrator.

To change your own password, click **Manage Login Credentials**, enter your current password, then your new password and confirm that new password by re-entering it.

### 1.17.7 Account Recovery and Password Reset

Org owners have the ability to:

- Enable a user to recover their account, for example when they have lost their YubiKey
- Reset a member’s password (sufficient if the member still has their YubiKey)
- Change a member’s role

As an org owner, do any of the above by going to the **Edit member** page by clicking the Edit icon next to the red trashcan icon to the right of the member’s name.

The commands for these options are illustrated in the following screenshot of the **Edit member** page:

### 1.17.8 Adding or Deleting an Org Member

Org Owners can add an Org Member by clicking **Add new member** from the Users tab of the **Settings** screen. The **Add new member** popup appears. Enter the new user’s email address and role (YubiEnterprise Auditor, YubiEnterprise Admin, Owner):
Fig. 1: Org Owner’s View of the Edit member Page

Edit member firstname.lastname@acme.com

Last logged in: Oct 27, 2023, at 9:34 AM (GMT+2), an hour ago

Reset user
The user recovery process usually entails:

1. The user is sent a recovery email
2. The email contains a link that takes them to the account recovery flow
3. The account recovery flow asks the user for a new password and to enroll a security key

Reset password
The password reset process entails:

1. The user’s password is reset
2. The user is sent a password reset email
3. The user remains logged in if they already have an open session, but cannot log in again before they complete the password reset
4. The email contains a link that takes them to the password reset flow
5. The password reset flow authenticates the user with their security key, if they have one enrolled, and then asks the user for a new password

Change role
Customer view
- None
- YubiEnterprise Console Owner
- YubiEnterprise Console Admin
- YubiEnterprise Console Auditor

For user management and viewing orders not subject for reuse.

Save
Select at least one view
Add new member popup

For each new Org Member added by an Org Owner, the system generates the following email inviting the member to register:

**Please activate your account**

Hi,

Your system administrator has created a YubiEnterprise Delivery account for you.

To help you get started with YubiEnterprise Delivery Console, please see Yubico's 'Getting Started' video.

Click the following link to activate your account:

(continues on next page)
To delete an Org Member, on the Users tab of the Settings screen, the Org Owner clicks the trashcan icon to the right of the member’s role.

1.17.9 Lost or Reset YubiKey

If a user loses or resets their YubiKey, they can no longer log in to YubiEnterprise Delivery. Such a user must contact an org owner for their organization to have their account reset as described in Account Recovery and Password Reset. When the user acquires another security key to register, they can log in and register that second key. To avoid this scenario, it is best to register at least one other YubiKey at the same time as the first one, and to keep the additional YubiKey(s) in a safe place. For more information and instructions, see Spare YubiKeys.

1.17.10 Adding WebAuthn Credentials

To add WebAuthn credentials (register a security key), click your login icon - your initial - on the top right of any screen, then click Manage login credentials. The Account page is displayed:

Click Add, and the ensuing dialog prompts you to insert a security key, then asks you if you will allow the YubiEnterprise Delivery site (the Console) to “see” that key. Click Allow. In the screenshot above, the item registered as Authenticator is actually a YubiKey from the 4 Series.
Managing API Tokens

For information on API tokens and the relevant guidelines, see *API Onboarding Playbook* and *API: Best Practices and FAQs* respectively.

To file a support ticket with Yubico, click Support.

## 1.18 Single Sign-On (SSO)

The purpose of the SAML open standard is to deliver a seamless user experience through SSO flows. SSO through Security Assertion Markup Language (SAML) can be initiated by an Identity Provider (IDP-initiated SSO (or IdP-initiated SSO)) or by a Service Provider (SP-initiated SSO).

### 1.18.1 IDP-initiated SSO and SP-initiated SSO

With the release of YubiEnterprise Services 2.4.0, both forms of SSO are supported. Org owners can enable IDP-initiated SSO by logging into the **Console** with credentials, going to the **Settings > SSO** tab, configuring IDP-initiated SSO, and clicking the new checkbox for it.

#### IDP-initiated SSO

The IDP (or IdP) authenticates users when they present their credentials so that those users can then access other websites and applications (which latter are thus referred to as “relying applications”). The SAML flow for an IDP-initiated SSO is as follows:

1. When the IDP and SP established SSO trust, they shared a private key.
2. The user’s identity is sent by the IDP to the SP in the form of a SAML assertion signed with the private key.
3. To retrieve the SAML Assertion securely, the IDP uses the user’s browser or a reference that the SP can use.

#### SP-initiated SSO

SPs do not authenticate users themselves; they rely on an IDP to:

- Store the user’s information (including attributes for the particular service requested)
- Make authentication decisions based on that information.

SP-initiated SSO comes into play when a user tries to access an application at the SP end without having first authenticated with an IDP. In this case, the SAML flow is as follows:

1. In the absence of an active browser session, the SP redirects the user to the IDP to request authentication.
2. The user’s identity is sent by the IDP to the SP in the form of a SAML assertion signed with the *private* key.
3. If the SP supports SSO from multiple IDPs, it can determine which IDP to use by:
   1. Requesting the user to enter additional Information
   2. Showing the user the list of supported IdPs so the user can select the right one
   3. Using a resource URL specific to a specific IDP
   4. Restoring an IDP cookie in the user’s browser session from initial IDP login
4. Upon receipt of the SAML assertion, the SP validates the signature using the public key and presents the user with its landing page as if the user had logged in with the usual credentials instead of SSO.

1.18.2 SSO As Sole Means of Logging In

SSO enablement introduces a new category of user, i.e., those who are able to log in only via SSO. Users added after SSO is enabled fall into this new category. The credentials of users enrolled prior to SSO enablement will still be available after SSO is enabled, which means they will still be able to log in with username and password. Org Admins and Auditors who log in this way will be directed to authenticate via the SSO link in order to perform Console operations. Org owners must log in with credentials to configure SSO.

API tokens will not be affected by SSO enablement or disablement. They will keep working as usual.

Users can only use SSO to log into a single org at a time. If a user is a member of multiple orgs, that person cannot use SSO-logged-in sessions and switch between orgs. Org selection is only available if the user logs in with credentials immediately after login or from the Profile page. If a user needs to switch from one SSO-enabled org to another SSO-enabled org, they must log out of the first one and use the login link supplied by the Service Provider (SP) for the other org.

See also Managing Passwords, etc. with SSO: Single Sign-On.

1.18.3 Permissions after SSO Enablement

Logging in With Credentials

Org Owners, Admins, and Auditors who log in with credentials can update those credentials: change password, edit, delete, and add new YubiKeys.

Org Owners who log in with credentials can also configure SSO.

All other Console operations require logging in via SSO.

This permissions setup prevents Org Owners who have forgotten their passwords logging in via SSO, then disabling or misconfiguring SSO and inadvertently locking themselves out.

Logging in Via SSO

Users who are invited to join YubiEnterprise Services after SSO enablement will not be asked to enroll credentials; instead, they will immediately be accorded Active status. In contrast, users invited to join before SSO enablement go into the Pending state until they enroll their credentials.

All users will be able to log in via SSO immediately by using the SP’s SSO login link.

Users who log in using credentials will be redirected to log in via SSO.

Only when logging in via SSO (using the SP link) can users perform the usual operations permitted by their roles (e.g., shipment request creation, listing POs, inviting users, etc.).

Updating credentials after logging in via SSO is not possible for any role; the credential management page is not accessible.

Although Org Owners can configure SSO, the SSO configuration page is read-only if they log in using SSO.

If a user who is a member of multiple organizations logs into one of them via SSO, that user cannot switch between those organizations without first logging out of the original organization. Only then can that person use the SP’s SSO link to log in to the desired organization.
1.18.4 Requirements for SSO Enablement

To enable an SSO integration you need to:

- Be using SAML 2.0 with Azure AD or Okta or Google Workspace as your Identity Provider (IDP). Other IDPs are likely to be compatible, but they are not supported. (For this latter case, see SSO Configuration Tab.)
- Have owner / admin /super-admin access to the SSO app in your IDP account for permissions to manage the SAML configuration and users
- Know how to enable, edit and disable your IDP’s SSO offering
- Be able to share the SSO link with the YubiEnterprise Services users in your org out-of-band after SSO is enabled: this is not something that the system does automatically
- Be an Org Owner in YubiEnterprise Services
- Be able to log in to YubiEnterprise Services with username and password and have a YubiKey enrolled (i.e., via credentials as opposed to via SSO).

1.18.5 Known Limitations

- Since users invited to join YubiEnterprise Services after SSO enablement are not required to have user-name/password, they will not be able to log in if SSO access is disabled. Workaround for enabling access via credentials: Users invited to join YubiEnterprise Services after SSO enablement must be reset in order to enable them to enroll credentials. Resetting a user triggers the system to send the user an email directing them to reset their username/password and enroll a YubiKey.
- Google Workspace cannot support both the Service Provider-initiated ACS URL and the Identity Provider-initiated ACS URL at the same time. It is also not possible to set up two different SAML Apps in the same Google Workspace, because Google Workspace enforces SP EntityID uniqueness across all SAML Apps in the workspace. Explanation: When IDP-initiated SSO is enabled with the Google Workspace SAML application, the IDP-initiated SSO ACS URL must be configured (/realms/y4o-azad/broker/sso/endpoint/clients/idp-initiated) as the ACS URL in order for the Google Dashboard link to work. When the Google Workspace SAML application is configured with this URL, the IDP will not work with the SP-Initiated flow. This is because the Reply URL (ACS) endpoint (/realms/y4o-azad/broker/sso/endpoint) does not match what is configured above.

1.18.6 Enabling SSO with Azure AD

These instructions assume that your company’s SAML application has already been created in Azure AD.

Note: The Azure AD SAML Enterprise Application can be made to work with both the SP-initiated and IDP-initiated flows. Configure both the IDP-initiated ACS URL and the SP-initiated ACS url as valid reply URLs. Make sure to mark the IDP-initiated URL as default.
Copy Entity ID from Console to Azure AD

Step 1
As Org Owner, use credentials (i.e., password and MFA) to log in to the YubiEnterprise Console, then go to Settings > SSO. The Configure SAML Single Sign-On page appears. Click the copy icon at the end of the EntityID/Identifier field under “Step 1”.

Step 2
Log into your Azure tenant https://portal.azure.com/signin/index/.

Step 3
Set up the new application in Azure AD (note that this does not mean “create the new application”) by going to Manage Azure Active Directory and clicking View.
Your company’s **Overview** page for Azure AD appears.

### Step 4
From the menu on the left-hand side, select **Enterprise Applications**. Your company’s Overview page for all applications appears.

### Step 5
From the list in the center pane, select the appropriate SAML application. The **Overview** page for that application appears.

### Step 6
Click **Get started** in the second box **Set up single sign on**. The [Name of your organization’s enterprise application] SAML | SAML-based Sign-on page appears.
Step 7
Click the Edit icon for **1 Basic SAML Configuration**. The **Basic SAML Configuration** window appears.

**Basic SAML Configuration**

Identifier (Entity ID) *

*The unique ID that identifies your application to Azure Active Directory. This value must be unique across all applications in your Azure Active Directory tenant. The default identifier will be the audience of the SAML response for IDP-initiated SSO.*

Default

https://login.

Add identifier

Reply URL (Assertion Consumer Service URL) *

*The reply URL is where the application expects to receive the authentication token. This is also referred to as the “Assertion Consumer Service” (ACS) in SAML.*

Index Default

https://login.

Add reply URL

Step 8
Under **Identifier (Entity ID)**, click **Add identifier**. A new field appears.
Basic SAML Configuration

Identifier (Entity ID) *

The unique ID that identifies your application to Azure Active Directory. This value must be unique across all applications in your Azure Active Directory tenant. The default identifier will be the audience of the SAML response for IDP-initiated SSO.

Step 9
Paste what you copied from the Console (in step 1) into the Identifier (Entity ID) field in Azure. If you select the Default checkbox, you will be marking this as primary. This will be the identifier sent for IDP-initiated SAML responses.

Step 10
Save your settings by clicking Save in the top left corner of the Basic SAML Configuration Edit window.

Copy Reply URL from Console to Azure AD

Step 1
As Org Owner, use credentials (i.e., not SSO) to log in to the YubiEnterprise Console, then go to Settings > SSO. The Configure SAML Single Sign-On page appears. Click the copy icon at the end of the Reply URL (ACS) field under “Step 1”.

1.18. Single Sign-On (SSO) 143
Step 2

Unless you are already logged into Azure and on the Basic SAML Configuration Edit window, log into your Azure tenant https://portal.azure.com/signin/index/ and perform steps 2-7 in Copy Entity ID from Console to Azure AD above.

Step 3

Under Reply URL (Assertion Consumer Service URL), click Add reply URL. A new field appears.
Step 4
Paste what you copied from the Console’s **Reply URL (ACS)** field (in “Step 1”) into the **Reply URL (Assertion Consumer Service URL)** field in Azure. If you select the **Default** checkbox, you will be marking this as primary, and IDP-initiated SAML responses will be sent to this reply URL.

Step 5
In Azure, save your settings by clicking **Save** in the top left corner of the **Basic SAML Configuration** Edit window.

### Copy Login URL + Azure AD Identifier from Azure to Console

**Step 1**
Unless you are already logged into Azure and on the **Basic SAML Configuration** Edit window, log into your Azure tenant [https://portal.azure.com/signin/index/](https://portal.azure.com/signin/index/) and perform steps 2-7 in **Copy Entity ID from Console to Azure AD** above.

**Step 2**
In Azure, in section 4 **Set up [your company’s] SAML**, click the copy icon at the end of the **Login URL** field.

**Step 3**
As Org Owner, use credentials (i.e., not SSO) to log in to the Console, then go to **Settings > SSO**. The **Configure SAML Single Sign-On** page appears. Paste the content from the **Login URL** field in Azure into the **IDP login URL** field in the **Step 2** box in the Console.
Step 2

Fill in metadata

EntityID/Issuer*  😕
https://sts.windows.net/

IDP login URL*  😕
https://login.microsoftonline.com/

X.509 cert (Base64)*  😕
MIIC8DCCAdigAwIBAgIQTmcP7IoRMKVMDLPCIF1gi2ANBgkqhkiG

Step 4

Go back to Azure, and in section 4 Set up [your company’s] SAML, click the copy icon at the end of the Azure AD Identifier field.

Step 5

In the Console, in Settings > SSO, on the Configure SAML Single Sign-On page in the Step 2 section, paste the content from the Azure AD Identifier field in Azure into the Console's EntityID/Issuer field.
Copy X509 Certificate from Azure AD to Console

Step 1
Unless you are already logged into Azure and on the Basic SAML Configuration Edit window, log into your Azure tenant https://portal.azure.com/signin/index/ and perform steps 2-7 in Copy Entity ID from Console to Azure AD above.

Step 2
In section 3, SAML Certificates, download the Certificate (Base64) by clicking on the Download button.
YubiEnterprise Services

Step 3
Open the file in a text editor like Notepad (not something like Microsoft Word, which deposits all kinds of undesirable artifacts into a simple text file), and copy it. It is not necessary to remove the header and footer lines:

```
-----BEGIN CERTIFICATE-----
MIICBDCCAAdgAwIBAgIQVZsDBKHF0NPyZtv3bDANBgkqhkjG9wEBAQsFADA8MT1wNAYDVQQ

-----END CERTIFICATE-----
```

Step 4
In the Console, in Settings > SSO, on the Configure SAML Single Sign-On page in the Step 2 section, paste the certificate content into the X.509 cert (Base64) field. (The header and footer in the file will be automatically stripped out when you save.)

Step 5
Click the Save settings button at the bottom of the Console page.

Set Attributes & Claims in Azure AD

There is always a required claim. Ensure that the name identifier format is Email address.

Step 1
Unless you are already logged into Azure and on the Basic SAML Configuration Edit window, log into your Azure tenant https://portal.azure.com/signin/index/ and perform steps 2-7 in Copy Entity ID from Console to Azure AD above.

Step 2
In section 2, Attributes & Claims, click the Edit icon.

Step 3
In the Attributes & Claims window that appears, click the Unique User Identifier (Name ID) in
the **Required claim** section.

### Attributes & Claims

<table>
<thead>
<tr>
<th>Claim name</th>
<th>Type</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unique User Identifier (Name ID)</td>
<td>SAML</td>
<td>user.userprincipalname[... ***</td>
</tr>
</tbody>
</table>

### Additional claims

<table>
<thead>
<tr>
<th>Claim name</th>
<th>Type</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td><a href="http://schemas.xmlsoap.org/ws/2005/05/identity/claims/emailaddress">http://schemas.xmlsoap.org/ws/2005/05/identity/claims/emailaddress</a></td>
<td>SAML</td>
<td>user.mail</td>
</tr>
<tr>
<td><a href="http://schemas.xmlsoap.org/ws/2005/05/identity/claims/givenname">http://schemas.xmlsoap.org/ws/2005/05/identity/claims/givenname</a></td>
<td>SAML</td>
<td>user.givenname</td>
</tr>
<tr>
<td><a href="http://schemas.xmlsoap.org/ws/2005/05/identity/claims/name">http://schemas.xmlsoap.org/ws/2005/05/identity/claims/name</a></td>
<td>SAML</td>
<td>user.userprincipalname</td>
</tr>
<tr>
<td><a href="http://schemas.xmlsoap.org/ws/2005/05/identity/claims/surname">http://schemas.xmlsoap.org/ws/2005/05/identity/claims/surname</a></td>
<td>SAML</td>
<td>user.surname</td>
</tr>
</tbody>
</table>

**Step 4**

In the **Manage claim** window that opens, if the **Name identifier format** is not **Email address**, select it from the dropdown list.
YubiEnterprise Services

* * * > SAML-based Sign-on > Attributes & Claims

Manage claim

Save  Discard changes  Got feedback?

Claim conditions

Advanced SAML claims options

Step 5
Save your settings in Azure by clicking Save in the top left corner of the Manage claim window. The Attributes & Claims window reappears.

Step 6
In the Attributes & Claims window, directly underneath the title, click + Add new claim. The Manage claim window appears.
Step 7

In the Manage claim window, in the Name field, enter emailAddress, and for Source leave the default setting with the Attribute radio button. From the Source attribute dropdown, select user.mail. Click Save. The Attributes & Claims window reappears with your new claim listed.
Verify and Save SSO Settings in Console

**Step 1**
In the Console, look at Settings > SSO Configure SAML Single Sign-On to make sure that the content you pasted in is correct.

**Step 2**
In the last section, Step 3, copy the SP Initiated Login URL by clicking the copy icon at the end of it. Save the URL so that you can send it to YubiEnterprise Services users.

**Step 3**
Save this link in a safe place to share with your users later

SP Initiated Login URL
https://login.

Save settings  
Enable SSO

**Step 3**
Before enabling SSO, make sure to send all users who will be enabled for it this SP Initiated Login URL. The same link will also be shown on the login screen after you have enabled SSO.

Add Users and Enable User Login via SSO

Add users first to Azure, then to YubiEnterprise Services. Before you can add them to your company’s SAML application in Azure, the users must be added to your company’s Azure AD instance at the top level.

If necessary, make sure that you have the permissions in Azure to have groups available for assignment.

**Step 1**
On your company’s Overview page in Azure, from the menu on the left under Manage, select Users.
On the Users page, the entire list of your company’s users appears.

**Step 2**
To add entirely new users to Azure as opposed to adding them to the SAML organization, click New user at the top of the page and follow the directions provided in the subsequent pages. Otherwise select the users for whom you are enabling SSO by clicking on the checkbox next to the respective Display name.

**Step 3**
From [your company’s] SAML Overview page, click Assign users and groups.

The Users and groups window appears.

**Step 4**
Click Add user/group at the top of the window. The Add Assignment screen appears.
YubiEnterprise Services

Add Assignment

Yubico

Groups are not available for assignment due to your Active Directory plan level. You can assign individual users to the application.

Users

None Selected
Select a role
User

Underneath Users, click None Selected, and a list of your total users in Azure appears.

Step 5
Select the checkboxes for the requisite users, then click the Select button.

Step 6
As Org Owner or Admin, log into the Console, go to Settings > Users, and add any necessary users to YubiEnterprise Services from Azure.

1.18.7 Enabling SSO with Okta

These instructions assume that your company’s SAML application has already been created in Okta.

Step 1
Log in to the YubiEnterprise Console with username and password and navigate to Settings > SSO. This is the location from which you will be copying information.

Configure SAML Single Sign-On

Copy this information for your IdP setup

EntityID/Identifier

Reply URL (ACS)

Step 2
Log in to your company’s Okta tenant https://developer.okta.com/login/ as Admin, and navigate to Applications > Applications. The Applications page appears on the right.
Step 3

Click **Create App Integration**. The **Create a new app integration** window appears.

**Create a new app integration**

Sign-in method

[Learn More]

- **OIDC - OpenID Connect**
  
  Token-based OAuth 2.0 authentication for Single Sign-On (SSO) through API endpoints. Recommended if you intend to build a custom app integration with the Okta Sign-in Widget.

- **SAML 2.0**
  
  XML-based open standard for SSO. Use if the Identity Provider for your application only supports SAML.

- **SWA - Secure Web Authentication**
  
  Okta-specific SSO method. Use if your application doesn’t support OIDC or SAML.

- **API Services**
  
  Interact with Okta APIs using the scoped OAuth 2.0 access tokens for machine-to-machine authentication.

[Cancel]  [Next]

Step 4

Select **SAML 2.0** and click **Next**. The **Create SAML Integration** window appears.
Step 5

On the 1. General Settings tab, enter the appropriate name in the App name field, make any other necessary settings and click Next. The Configure SAML tab of the Create SAML Integration window appears.

Copy Entity ID from Console to Okta

In the Console Settings > SSO page from Step 1 in Enabling SSO with Okta, click the copy icon to copy the EntityID/Identifier from the Console.
Configure SAML Single Sign-On

Step 1

Copy this information for your IdP setup

- **EntityID/Identifier**
- **Copy content to Okta’s *Audience URI (SP Entity ID)* field**
- **Reply URL (ACS)**

Paste it into the **Audience URI (SP Entity ID)** field in Okta’s **Configure SAML** tab.

---

1.18. Single Sign-On (SSO)
Copy Reply URL from Console to Okta

In the Console Settings > SSO page from Step 1 in Enabling SSO with Okta, click the copy icon to copy the Reply URL (ACS) from the Console.

Configure SAML Single Sign-On

Copy this information for your IdP setup

- Entity ID/Identifier
- Reply URL (ACS)

Copy content to Okta’s *Single sign-on URL* field

Paste it into the Single sign-on URL field in Okta’s Create SAML Integration window on the Configure SAML tab. Enable the checkbox for Use this for Recipient URL and Destination URL.

Create SAML Integration

1. General Settings
2. Configure SAML

SAML Settings

General

- Single sign-on URL
- Audience URI (SP Entity ID)

- Use this for Recipient URL and Destination URL
- Paste *EntityID/Identifier* from YubiEnterprise Console
Set Name ID Format, Application Username, and Attribute Statement

**Step 1**
In Okta, still in the **General** section on the **A SAML Settings** tab, from the **Name ID format** dropdown, select **EmailAddress**.

**Step 2**
From the **Application username** dropdown, select **Email**.

**Step 3**
Scroll down to the **Attribute Statements (optional)** section, and
- Under **Name**, enter **emailAddress**
- Leave the **Name format** unspecified
- Under **Value** enter **user.email**.
Step 4
Scroll down to the bottom of the tab and click Next. The Feedback tab appears.

Step 5
On the Feedback tab under Create SAML Integration, select either:

- I’m an Okta customer adding an internal app
- I’m a software vendor. I’d like to integrate my app with Okta,

provide feedback as desired (or not) and click Finish. The Sign On tab for your application appears.
Copy IDP SSO URL + X509 Certificate from Okta to Console

**Step 1**
On the bottom right of Okta’s **Sign On** tab, click the **View SAML setup instructions** tab.

The **How to Configure SAML 2.0 for [name of your] Application** window appears.
How to Configure SAML 2.0 for [name of your] Integration Application

1. Identity Provider Single Sign-On URL:
   - https://URL
   - .saml

2. Identity Provider Issuer:
   - http://www.okta.com/

3. X.509 Certificate:
   - [Certificate text]
   - Download certificate

Step 2
Still in Okta, copy the content of the Identity Provider Single Sign-On URL: to the IDP login URL field in the Console.
Step 3
From the Okta The following is needed to configure [application name] window, copy the Identity Provider Issuer to the Console’s EntityIDIssuer.

Step 4
In Okta, click Download certificate under X.509 Certificate, then paste the content to the Console’s X.509 cert (Base64) field.

Step 5
In the Console, click Save settings.

Step 6
From the Console, copy the SP Initiated Login URL and send it to your users.
YubiEnterprise Services

Add YubiEnterprise Services Users to Okta’s SAML App Integration

To Okta, add the YubiEnterprise Services users for whom you intend to enable SSO. (Detailed instructions for this can be found in Okta’s documentation.) In order to be available for adding to an application integration, the users need to be in Okta itself first. In Okta, navigate to Applications > Applications and click Assign Users to App. The [name of app] page for your app appears.

Assign YubiEnterprise organization members as a group or as individuals.

In the Console, enable SSO.

Enabling Both IDP- and SP-initiated SAML Flow for Okta

This subsection assumes that you have reviewed the instructions for IDP-initiated SAML flow with Okta.

Step 1

In the Console (Settings > SSO), enable Allow IDP-initiated single sign-on by clicking the checkbox and copy the IDP-initiated Login URL.
Step 2
In Okta, go to App General > SAML Settings > Edit > Edit SAML Integration: General Settings > Configure SAML.

Step 3
Still in Okta, paste the IDP-initiated Login URL from the Console into the Single sign-on URL field, click Use this for Recipient URL and Destination URL, then click Next and finally Finish.

Step 4
Test: in Okta, on App General > App Embed Link, copy the IDP-initiated login link from the Embed link field into your browser to verify that the link redirects you to the Console after Okta login.
This configuration enables both the IDP- and SP- initiated SAML flows for Okta.

### 1.18.8 Enabling SSO with Google Workspace

**Prerequisites**

- Ensure that you are an Org Owner in YubiEnterprise Console
- System role: Your Google Workspace Administrator Seed Role must be Super Admin.
- Ensure you have access to the email account associated with that Google account.
Procedure

Add a Custom SAML App in Google

Step 1
Log into the Google Admin Workspace by going to admin.google.com/ and selecting the appropriate account as shown here:

![Google Admin Workspace login](Image1)

Step 2
Enter username and password for the selected account. (Your company may have set up Google Groups to require a YubiKey, in which case, you will be prompted to plug one in and touch it.) After login, the Admin page appears:
Step 3

Navigate from Apps to Web and mobile apps by selecting the latter, so that you arrive at the Apps > Web and mobile apps page:
Step 4
Create a new SAML app by clicking on the Add app dropdown and selecting Add custom SAML app. (If you do not see this option, it is because your role is not Super Admin.)

Under the Add custom SAML app banner, the 1 App details tab is displayed:
Step 5
In the **App details** tab:

- (Mandatory) Enter a name in the **App name** field.
- (Optional) Add a description in the **Description** field.
- (Optional) Attach an icon for the app by clicking on the big blue button.

Click **CONTINUE**. Under the **Add custom SAML app**, the **Google Identity Provider detail** page appears:
Configure the Custom SAML App

Prepare to copy and paste information from the Google Add custom SAML app screen to the YubiEnterprise Console Configure SAML Single Sign-On page - and vice versa. Using two browser windows side-by-side, bring up YubiEnterprise Console next to the Google Workspace. Leave the browser window with Google open, but reduce the size if necessary to half your screen, and open an additional browser window in the other half of your screen for YubiEnterprise Delivery.

Step 1
Log in to the Console as Org Owner with username, password, and YubiKey.

Step 2
On the Console, navigate to the SSO configuration page: Settings > SSO.
Configure SAML Single Sign-On

Step 1

Copy this information for your IdP setup

**EntityID/Identifier**
https://login.

**Reply URL (ACS)**
https://login/docs-test/

Step 2

Fill in metadata

**entityID issuer**
https://login-4515-be0c-a7e3d7a4ad4c/

**IDP login URL**
https://login/18fb64-d409-4515-be0c-a7e3d

**SAML cert (Base64)**

MIBC8D
G9w0B4
ByNaW
WZpYzE
MDdY
3lw5m
U1NPX

Step 3

Save this link in a safe place to share with your users later

**SP Initiated Login URL**
https://login

Save settings  Cancel

Enable SSO
Step 3
Enter the following values from Google’s 2 Google Identity Provider detail page into the Console’s SSO configuration form, transferring them from the fields listed in the table:

<table>
<thead>
<tr>
<th>Google</th>
<th>YubiEnterprise Console</th>
</tr>
</thead>
<tbody>
<tr>
<td>SSO URL</td>
<td>IDP login URL (step 2)</td>
</tr>
<tr>
<td>Entity ID</td>
<td>EntityID/Issuer (step 2)</td>
</tr>
<tr>
<td>Certificate</td>
<td>X.509 cert (Base64)(step 2)</td>
</tr>
</tbody>
</table>

On the Console’s Configure SAML Single Sign-On page, click Save settings.

Step 4
In Google, in the Add custom SAML app screen, click CONTINUE. The 3 Service provider details window appears.

Step 5
In Google, in the 3 Service provider details window, enter the following values from YubiEnterprise Console into Google’s form, transferring them from the fields listed in the table:

<table>
<thead>
<tr>
<th>Google</th>
<th>YubiEnterprise Console</th>
</tr>
</thead>
<tbody>
<tr>
<td>ACS URL</td>
<td>Reply URL (ACS) (step 1)</td>
</tr>
<tr>
<td>Entity ID</td>
<td>EntityID/Identifier (step 1)</td>
</tr>
<tr>
<td>Start URL - leave blank</td>
<td></td>
</tr>
<tr>
<td>Name ID format - set EMAIL</td>
<td></td>
</tr>
<tr>
<td>Name ID - leave Basic Information &gt; Primary email</td>
<td></td>
</tr>
</tbody>
</table>

Step 6
In Google, in the Service provider details screen, click CONTINUE. The Attribute Mapping page appears (with Attributes and Group membership (optional)). Skip these steps by clicking FINISH. The page for your new SAML app appears:

**Step 7**
In Google, ensure that User Access is ON for everyone by clicking on the tiny caret in the upper right corner of the User access section, circled in magenta in the screenshot below:

The Service Status window opens, as shown below:

Toggle the service status radio control to ON for everyone and click SAVE.

**Step 8**
In the YubiEnterprise Console, click Save settings. Then click Enable SSO. (Unless you had already enabled it and were doing nothing more than updating your SSO configuration, in which case it was already enabled.)
Troubleshooting

Issue
Changing the ACS URL in an existing Google IDP configuration does not appear to be successful even after waiting a significant amount of time.

Workaround
Start over. Delete your Web and mobile app and start again.

Issue
Sometimes the Google site displays the 500 error after SSO configuration.

Workaround
Update the Entity ID with a trailing forward slash “/”. If you already have such a slash, remove it.

Issue
Sometimes Google presents the message “Service is not configured for this user”.

Workaround
Update the Entity ID with a trailing forward slash “/”. If you already have such a slash, remove it.

1.18.9 SSO Configuration Tab

To try out SSO for unsupported IDPs, go to Settings > SSO Configure SAML Single Sign-On, and fill in the fields on the Configure SAML Single Sign-On tab shown below:
Configure SAML Single Sign-On

1. Copy this information for your IDP setup

- **EntityID/Identifier**
  - https://login.dev.yubico.com/sso/docs-test-azure/entityId

- **Reply URL (ACS)**
  - https://login.dev.yubico.com/realms/docs-test-azure/broker/soo/endpoint

2. Fill in metadata

- **EntityID/Issuer**
  - https://sts.windows.net/318fbfe4-d409-4515-be0c-a7e3d7a4ad4c

- **IDP login URL**
  - https://login.microsoftonline.com/318fbfe4-d409-4515-be0c-a7e:

- **X.509 cert (Base64)**
  - MIIC8DCCAgwIBAgIQTmcP7IoRMKVMMLPCIF1gizANBgkq
    9êiG9w0BAGsFADA0MTiWMAYDVODQD
    EyNaWby3NvZmQoQXp1cmUgRrVvKxXJ1hdGVkFNTTy8DZjX
    0aWZpY20TATeFw0yMjExMzAxMDEx
    MDaFWoqYmNEtMzAzMDExMDAzMDQxMjAwBgNVBAoMTKU1
    pY3vU29mCBBeVY2SBGZWRlcxFOZzWQg
    U1NPeICoRmRwmljXQRIIIMBjyANBgkqhkiG9w0BAQEFAAOCAQ
    RAoIBCkCFAEjT0SFC5mNwQ[...]

3. Save this link in a safe place to share with your users later:

- **SP Initiated Login URL**
  - https://login.dev.yubico.com/sso/docs-test-azure

Save settings  Cancel  Enable SSO
Note: Be aware that the field labels vary depending on the IDP. For examples of these variances, look at the instructions above for the supported IDPs, Microsoft Azure, Okta, and Google Workspace.

1.18.10 Disabling SSO

To disable SSO, in the Console, go to Settings > SSO Configure SAML Single Sign-On and click the Disable SSO button.

Note: Because none of the users added after SSO was enabled will be able to login once SSO is disabled, it becomes necessary to determine which users need to be enabled to log in with credentials. To do this, the Org Owner must log in with credentials, then go to Settings > Users. The MFA column in the table indicates which users have credentials. To enable users added after SSO enablement to enroll credentials and log in again, reset them (see Account Recovery and Password Reset).

1.19 Best Practices and Troubleshooting

1.19.1 Best Practices

Note: The best practices specific to YubiEnterprise APIs are in the API: Best Practices and FAQs section of Shipping Request Via API.

- Have at least two Org Owners who can manage members (see User Management).
- Inform both your YubiEnterprise users and your end-users in advance that they will receive email from Yubico’s YubiEnterprise Delivery. Without this advance notice, they are likely to regard these emails as phishing attempts.
- If YubiEnterprise appears to be behaving strangely, check the status of Yubico services: http://status.yubico.com/.

Subscription customers:
YubiEnterprise Services

– To ensure that you do not let keys in any of your inventories expire unused, create a spreadsheet to plan the allocation of products across users and inventory types. See Example Subscriptions.
– When creating a shipment request, select the inventory type before selecting the item(s) to be shipped.

Limits and Constraints

When planning and executing shipment requests, keep in mind the primary limits and constraints set out in Delivery Policies, but also the following:

Although the system can deliver to Post Office (PO) Boxes within the United States, delivery to the equivalent elsewhere in the world is unlikely to succeed.

The entity through which you submit a PO is always referred to as a channel partner. “Channel partner” is a term that covers distributors, resellers, and even Yubico itself. Yubico’s Channel partner ID (or ChannelPartnerId or channelpartner_id) is “1”.

Note: The selection of channel partner is not supported in the /shipments API.

Because inventory is sorted according to the source from which it was purchased, when requesting shipment, distinguish between inventory purchased directly from Yubico and inventory purchased through distributors and resellers doing business with Yubico. The Dashboard shows your total inventory of any given product, combining quantities purchased from all sources: both directly from Yubico and indirectly through channel partners. To find out what is in which inventory, check your purchase orders.

To find out what the channel partner (reseller or distributor) ID is:

BEFORE shipment

The name of the channel partner (reseller or distributor) is shown on the Purchase orders tab, and the channel partner ID is shown on the PO detail popup accessed by clicking on the Purchase order number:

Purchase order #: PO01234

NetSuite sales order number: S001234
Order date: 07 Jul 2023
Reseller: Yubico
Reseller ID: 1

123 State Street
Austin
Texas
73031
US

</tr>
</tbody>
</table>

Example of an overly long name before adjustment to fit the fields
Johannes-Maximilian von Derschowitz-Dampfloch zu Querdenker

Example after adjustment
Joh.-Maximilian v.DerschowitzDampflo zu Querdenker

First Line

In the Console, First name and Last name and in the CSV file, recipient_firstname and recipient_lastname map to the first line on the shipping label.

Long recipient names can be problematic for all methods of requesting shipment, because the shipment request will fail if the contents of the First name / Last name fields and/or Company or recipient fields exceed the maximum number of characters permitted in these fields (shown in the table below). Workaround: When a recipient’s full name or company name exceeds the fields’ maximum lengths, split the names across the three fields, for example:
Second Line

The second line on the shipping label maps to the name of the recipient’s company if the address is not residential. For example, the system’s address verification function recognizes that Yubico’s Santa Clara facility is in a commercial building, therefore the company name is expected in:

- The **Company** field in the Console
- The **recipient_company** column in the CSV.
- The **recipient** field in the API

**Note:** API: Do not use the /shipments recipient field to specify the **name of the individual** to whom products are to be shipped. For this, use the **recipient_firstname** and **recipient_last name** fields instead.

If the address is residential, leave empty:

- The **Company** field in the **Console**
- The **recipient_company** cell in the CSV file
- The **recipient** field in the API.

### Examples of Bad Usage of Company Name Field

For example, entering the following information for a shipment request would result in failure because USPS recognizes that there are multiple companies in the building whose address is 530 Lytton Avenue:

<table>
<thead>
<tr>
<th>Jan Lindberg</th>
</tr>
</thead>
<tbody>
<tr>
<td>530 Lytton Avenue</td>
</tr>
<tr>
<td>Palo Alto, CA 94301</td>
</tr>
<tr>
<td>USA</td>
</tr>
</tbody>
</table>

Similarly, entering the following information for a shipment request would result in failure because a residential address would not be associated with a company.

<table>
<thead>
<tr>
<th>Jan Lindberg</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yubico Inc.</td>
</tr>
<tr>
<td>6 Lea Rd</td>
</tr>
<tr>
<td>Dronfield S18 1SB</td>
</tr>
<tr>
<td>UK</td>
</tr>
</tbody>
</table>

**Address validation** takes place every 15 minutes. This means that you might have to wait up to 15 minutes to find out if your shipment request has been queued for fulfillment (see **Shipping Status Codes**).

**Non-subscription purchases:** Shipment requests can be made for up to one year after a PO is submitted.

**Subscription purchases:** Availability of products in shipment requests depends on the stock/inventory from which the products are drawn. (For details, see **Tier Sub-categories**.)

The full list of options that were potentially available in Subscription (1.0) is given below. The actual list depends on what you have purchased. Explanations for the terms in the list are given in the table below the list. For more details on subscription and non-subscription purchasing, see **Modes of Purchase**.

**Subscription (1.0): Full List of Inventory Types**

- Primary Subscr - Base Tier: Initial

</tr>
</tbody>
</table>

**For Requests**

Shipment requests can be edited or deleted until 2am PST (10am GMT), the day after they were entered. For instructions on these procedures, see *Editing or Deleting a Shipment.*

**For Delivery**

**Normal (standard) shipping:** Typically, shipments will take 5-7 days for delivery in North America and Europe. Delivery to other parts of the world will take longer.

**Expedited (rush) shipping:** Typically, shipments within North America can be delivered in 1 business day. It may take longer to deliver shipments to other parts of the world, but Yubico will leverage the fastest delivery service reasonably available.
1.19.2 Troubleshooting

This section addresses issues that can arise with shipping. YubiEnterprise Delivery notifies you of the situation of any given shipment via the codes in the Status column of the Shipments tab. The table below, Shipping Status Codes, lists the error codes and their explanations.

YubiEnterprise Delivery uses address validation services to reduce the incidence of issues, but it is important to be aware that just because an address exists in Google Maps, it does not mean that the address is deliverable. ‘Deliverable address’ is a United States Postal Service (USPS) classification for designating addresses to which the USPS has historically been able to deliver. YubiEnterprise Delivery’s ability to deliver is based on address information being input in the format acceptable to the relevant address validation service. The USPS-acceptable formats are set out in detail in the USPS’s Postal Addressing Standards.

Note: When revising an address, the best option is to use the format Google Maps presents, because it usually does use the address format preferred by the validation service. In the example below, the address format that was input appears in the upper field, and Google Maps’ format is shown below the photo of the location.

Karl-Ferlemann-Straße 41
04177 Leipzig
Germany
Building

Address Validation Outside the US and Canada

For parts of the world with less standardized address formats, the fact that YubiEnterprise Delivery can accept an address does not mean that it is deliverable. An address will often be classified as “partially deliverable”, which means that we rely on local couriers who are familiar with the complexities of their urban systems and their delivery routes to deliver to the intended recipient.

Typically packages sent to European addresses and some parts of Asia reach their destination. Packages sent to South-east Asia and Eastern Europe typically arrive at the right street. In those parts of the world where there are no numbers in the postal addresses, the local courier’s capability is crucial to ensuring that the package actually arrives at its destination as opposed to ending up in its general area.
Shipping Status Codes

At any of the states between 1 and 9, a shipment request can be edited. From this point on, a shipment request is either processed through to an end state, or set back to state 99.

Note: As the following table is wide, you might need to scroll horizontally to see all columns.
### Table 22: Shipment State Codes

<table>
<thead>
<tr>
<th>shipment_state_id</th>
<th>shipment_state_code</th>
<th>shipment_state_description</th>
<th>shipment_state_message</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>ShipmentStateIncomplete</td>
<td>Shipment request received by YubiEnterprise Delivery system but contained some data that could not be processed. (2), (3)</td>
<td>Incomplete Shipping Request</td>
</tr>
<tr>
<td>2</td>
<td>ShipmentStateDraft</td>
<td>Shipment request is being edited and is not ready for processing.</td>
<td>Draft</td>
</tr>
<tr>
<td>3</td>
<td>ShipmentStateAwaiting-Validation</td>
<td>Shipment request received, no validation done yet.</td>
<td>Awaiting Validation</td>
</tr>
<tr>
<td>4</td>
<td>ShipmentStateProcessingAddress</td>
<td>Shipment request locked as it undergoes country check, address validation, sales tax rate lookup (US), DPL check.</td>
<td>Processing</td>
</tr>
<tr>
<td>5</td>
<td>ShipmentStateAddress-Valid</td>
<td>Shipment request address has been validated, ready to be picked up by fulfillment processor.</td>
<td>Accepted for Fulfillment</td>
</tr>
<tr>
<td>6</td>
<td>ShipmentStateAddressInvalid</td>
<td>Shipment request address is invalid but an alternative address has been found and suggested. (2), (3)</td>
<td>Incomplete</td>
</tr>
<tr>
<td>7</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
(1) Refer to *Timing* for cutoff times.

(2) Incomplete Address: Secondary line information such as apartment (apt), suite, unit is missing. Therefore it is not possible to guarantee delivery to the correct recipient.

(3) Address is Undeliverable or could not be understood: The address is either not physically deliverable or it could not be resolved to a real location.

(4) Any shipping request with a recipient name and/or address found on the US government’s DPL (Denied Parties/Persons List) cannot be fulfilled.

**Shipment Status Messages**

These error messages accessible via the API tell you why a given shipment request was unsuccessful. It is worth reviewing them before making any shipping requests in order to see what sort of issues might arise and thereby avoid them in the first place.

**Note:** As the following table is wide, you might need to scroll horizontally.

In the Explanation column, the source of the message is given: YubiEnterprise Delivery system for internal messages, US Validation for the US Postal Service, and finally, International Validation. Messages originating from the last two are simply passed on to you by YubiEnterprise Delivery.

- See the USPS FAQ.

**Insufficient Inventory**

To maintain the window during which orders can be updated, edited, or recalled/deleted, orders are held and processed in batch. Therefore there might be less inventory available by the time an order is processed than what was shown in purchase order details when the request was created. For example, the person starting to create a shipment request assumes that the 50 keys the console shows they have in inventory will still be available by the time the shipment request is submitted. When this is not the case, any shipment requests processed after the inventory is exhausted will be flagged with this error message:

Error: Processing Error, contact support.
Reason is Not enough Inventory for Shipment - ShipmentStateError

A second issue arises from the same source: when the user clicks on the shipment request ID with that error, part of the status message displayed is “Insufficient Inventory of Product X” where “X” is an integer. To find out what X means,
consult the Product Name, Stock/Inventory, product_id and inventory_product_id table.

A third issue arises from the same source: it is not possible to make single shipment requests for products that are not available in inventory - which is expected if insufficient product has been purchased, but an insufficiency of inventory can also be caused by Yubico itself running out of stock.

Workaround

Either contact Support to get more inventory, or edit the request to switch to another product for which inventory is available.

To file a support ticket with Yubico, click Support.

1.20 General FAQs

• Are there any limits or constraints on shipment requests? Yes:

  Address validation takes place every 15 minutes. This means that you might have to wait up to 15 minutes to find out if your shipment request has been queued for fulfillment (see Shipping Status Codes).

  Non-subscription purchases: Shipment requests can be made for up to one year after a PO is submitted.

  Subscription purchases: Availability of products in shipment requests depends on the stock/inventory from which the products are drawn. (For details, see Tier Sub-categories.)

The full list of options that were potentially available in Subscription (1.0) is given below. The actual list depends on what you have purchased. Explanations for the terms in the list are given in the table below the list. For more details on subscription and non-subscription purchasing, see Modes of Purchase.

- **Can there be unexpected delays in delivery of shipments?**
  YubiEnterprise Delivery Service is only available during regular business days, i.e., weekdays. It is not available on weekends or official holidays, even though there are no time constraints on the creation of shipment requests, which can be generated at any time.
  YubiEnterprise Delivery Service is dependent on third parties such as courier services and is therefore impacted by their scheduled holidays.
  Yubico tries to provide notification on the Console for delivery delays of more than 2 business days. Please reach out to YubiEnterprise Services Support with any further queries on shipment delivery delay.

- **Does YubiEnterprise Delivery track YubiKey serial numbers?**
  No, Yubico does not track the serial numbers.
• **What Personally Identifiable Information (PII) is retained by Yubico?**

   Yubico retains data only as long as necessary to operate our business and to comply with statutory and regulatory requirements. We do not use this data for any purpose other than meeting our obligations to our customers (e.g. shipping YubiKeys) and to comply with applicable laws. In accordance with export controls and tax law, Yubico is required to retain shipment data for up to seven years.

• **What is the data retention policy, i.e., how long is data held within the YubiEnterprise Delivery Console before being purged?**

   Data is kept for seven (7) years to comply with export control and financial legal requirements.

• **What happens to YubiKeys purchased on a subscription basis after expiry of the corresponding PO/term?**

   Any keys not shipped are forfeited, but the date of forfeiture or expiry depends on their inventory type: see the first question in this FAQ, “Are there any limits or constraints on shipment requests?”

• **What happens to YubiKeys purchased outright (perpetual) after one year in inventory?**

   YubiEnterprise Delivery enables customers to request shipments for up to 12 months after the initial PO. YubiEnterprise Delivery will hold the customer’s inventory, regular or custom keys. When the twelve-month period is up, YubiEnterprise Delivery will ship the remainder of the keys to the original customer address on file. The customer will also be notified 60 and 30 days prior to the period expiry via email.

• **What taxes will be charged to the customer?**

   See *Shipping*.

• **How will the customer be invoiced for the cost of shipping and taxes or VAT charged on shipping?**

   See *Shipping*.

• **How does Yubico handle customers who are exempt from VAT/sales tax?**

   See *Exemptions*.

• **What is the warranty on keys on a subscription contract?**

   The warranty is extended to cover the full term of the subscription and applies as long as the subscription is active.

• **Where is YubiEnterprise Delivery available?**

   YubiEnterprise Delivery is available in USA, Canada, EU, UK, Norway, Switzerland, Iceland, and Liechtenstein. YubiEnterprise Delivery is not available in EU Overseas Countries or Territories.

• **Can organizations that already have accounts with FedEx and UPS use those accounts with YubiEnterprise Delivery?**

   No, at the moment, YubiEnterprise Delivery cannot use customer-provided shipping partner accounts.

• **Can Yubico’s security keys and YubiKeys be custom programmed by Yubico for a customer?**

   Yes: the minimum initial order is 10,000 or more, with subsequent orders being at least 5,000.

• **What reports are available to customers to help better manage their YubiEnterprise Delivery?**

   YubiEnterprise Delivery customers can log into the YubiEnterprise Delivery Console and access their purchase orders, shipment requests, address book etc. They can also download all their shipment requests and status / tracking numbers over the period.

• **Our business is based in the US but has locations in Europe. Can YubiEnterprise Delivery support distribution of YubiKeys in this setup?**

   Yes, this use case is supported. A business headquartered in North America, but having office locations and users in Europe will be able to receive YubiKeys at their respective locations, including residential addresses.
• We may need to have several people in the company place orders for YubiKeys. How does YubiEnterprise Delivery satisfy that requirement?

Any individual who has administrative rights to the YubiEnterprise Delivery Console can place orders for keys through the console. Admins can be delegated across locations so that they can best gauge the numbers of users who will need YubiKeys and request shipments all at once, or over time as needed.

• What is the maximum number of YubiKeys that can be included in a shipment request?

It depends on the country to which you are shipping. See Delivery Policies.

• Can a shipment request be cancelled?

Yes. Shipment requests can be edited or deleted until 2am PST (10am GMT), the day after they were entered. Instructions for this procedure are given in Editing or Deleting a Shipment.

• What shipping delivery options are available?

Depending on the country being shipped to, one or both of the following will be available:

– Normal (standard) shipping
– Expedited (rush) shipping

For more details, see Timing.

• What do you do with the zip_code field if it is not applicable, for example, for Canada and the EU countries?

Leave the zip_code field blank and use the postal_code field instead.

• Where do I find official Yubico product images and descriptions?

On Yubico’s Press room images and logos page are the logo and product images.

1.21 Release Notes

The changes reported in the release notes are cumulative. We include all customer-visible functionality updates as well as any known issues and suggested workarounds.

1.21.1 Release 2.5.1 (31 October 2023)

Resolved Issues

• Console: The search results generated by using the Console’s search function to filter on shipments were not the same in the GUI as they were in the downloaded CSV file. For example, filtering shipments by Shipment address with multiple string terms, each separated from the next by a space, as in contains: stockholm 1 might have shown 60 shipments in the Console UI, but the downloaded CSV file would have contained none at all. This issue has now been fixed, and the results displayed by the Console UI are accurately reflected in the downloaded CSV file.
Known Limitations

- **Inventory/From Stock**: Although Console users can specify the inventory they want to draw from, this option is not available when using the CSV file with the API or when creating bulk shipments. These latter two methods only permit specifying the kind of stock (initial, replacement, buffer). When inventory is not specified or cannot be specified, the system uses the “first in, first out” rule, which means it will deduct from the oldest PO first.

- **CSV**: The CSV bulk upload does not support combining subscription and non-subscription products in a single shipment. **Workaround**: Use the API or the Console (from the **Dashboard** or the **Shipments** tab, Create shipment request > Single shipment) to create single shipment request that includes both types of products.

- **Channel Partners**: To order keys via API from inventory purchased through channel partners, the new /shipments_exact APIs must be used. The older, deprecated /shipments API only supports ordering keys from inventory purchased directly from Yubico. For more information, see **Inventory: Channel Partners**.

- **India shipments**: Some of our shipments to India use India Post for the last mile. India Post does not support our automated shipment tracking service, and therefore the tracking ID that YubiEnterprise Delivery displays is not actually a link. **Workaround**: Copy the India Post tracking number (typically 13 digits starting with E, R, or C) and paste it into either the India Post website - https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx (“Evaluate the expression” means do the arithmetic displayed in the box to prove that you are not a bot) or any of the other tracking service sites that support India Post, such as Ship24.com - (https://www.ship24.com/couriers/india-post-tracking).

- **Google Workspace cannot support both the Service Provider-initiated ACS URL and the Identity Provider-initiated ACS URL at the same time.** Neither is it possible to set up two different SAML Apps in the same Google Workspace, because Google Workspace enforces SP EntityID uniqueness across all SAML Apps in the workspace. For more information, see the **Known Limitations** section of the SSO topic.

### 1.21.2 Release 2.5.0 (26 October 2023)

**New Features & Enhancements**

- **Console**: Organizations now receive notification to add at least one more Console Owner if they currently have only a single owner. Console Owner is the only role that can perform password and account resets for users who have been locked out. Organizations that have only a single Console Owner who locks themselves out or leaves the organization will be obliged to contact Yubico to set up a new Console Owner.

**Resolved Issues**

- **API**: When getting a purchase order by its ID, extra, undocumented fields were returned. When a request for GET /v1/purchaseorders/{purchaseorderId} was sent, the response included (is_vat_valid, is_tax_exempt, is_post_pay). These extra fields are no longer returned.

- **The country name “Vietnam” was wrongly spelt as two words, “Viet Nam”, in several locations, such as in the list of countries to which an organization could ship, and in the shipment creation process. This issue has now been fixed, and “Vietnam” is no longer listed as two words.**

- **Console**: On the **Settings** tab, the **Email** field for adding new members is now limited to 255 alpha-numeric characters. This limit applies when adding a new user or editing an existing user.

- **API**: The public API documentation has been corrected to reflect our implementation for shipment APIs. The following were strings in the public API documentation; they have now been corrected to integer<int64>.
  
  - shipment_product_cost,
  - shipment_product_taxes,
- shipment_product_vat,
- shipping_service_cost,
- shipping_service_taxes,
- shipping_service_vat,
- total_shipment_product_cost,
- total_shipment_tax_cost,
- total_shipment_vat_cost,
- total_shipping_service_cost,
- total_keys_shipped.

Similarly, the shipment_destination_vat_rate was a string in the public API documentation; it has now been corrected to number<double>.

Known Limitations

- **Inventory/From Stock**: Although Console users can specify the inventory they want to draw from, this option is not available when using the CSV file with the API or when creating bulk shipments. These latter two methods only permit specifying the kind of stock (initial, replacement, buffer). When inventory is not specified or cannot be specified, the system uses the “first in, first out” rule, which means it will deduct from the oldest PO first.

- **CSV**: The CSV bulk upload does not support combining subscription and non-subscription products in a single shipment. **Workaround**: Use the API or the Console (from the Dashboard or the Shipments tab, Create shipment request > Single shipment) to create single shipment request that includes both types of products.

- **Channel Partners**: To order keys via API from inventory purchased through channel partners, the new /shipments_exact APIs must be used. The older, deprecated /shipments API only supports ordering keys from inventory purchased directly from Yubico. For more information, see Inventory: Channel Partners.

- **India shipments**: Some of our shipments to India use India Post for the last mile. India Post does not support our automated shipment tracking service, and therefore the tracking ID that YubiEnterprise Delivery displays is not actually a link. **Workaround**: Copy the India Post tracking number (typically 13 digits starting with E, R, or C) and paste it into either the India Post website [https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx](https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx) (“Evaluate the expression” means do the arithmetic displayed in the box to prove that you are not a bot) or any of the other tracking service sites that support India Post, such as Ship24.com - [https://www.ship24.com/couriers/india-post-tracking](https://www.ship24.com/couriers/india-post-tracking).

- Google Workspace cannot support both the Service Provider-initiated ACS URL and the Identity Provider-initiated ACS URL at the same time. Neither is it possible to set up two different SAML Apps in the same Google Workspace, because Google Workspace enforces SP EntityID uniqueness across all SAML Apps in the workspace. For more information, see the Known Limitations section of the SSO topic.

1.21.3 Release 2.4.3 (4 October 2023)

**New Features & Enhancements**

- **roles**, a new member of the org struct that supports multiple roles per org ID per user, has been added to the /auth/me endpoint of the openapi spec. The roles struct member replaces the top level roles field, which has been deprecated.
Resolved Issues

- Previously, when an enterprise console user attempted to download the shipments.csv file after sorting some of the Shipment columns, the following error message appeared: “Unable to download refund csv, please try again later.” This has been fixed so that users can successfully download the shipments.csv file no matter which columns have been sorted.

- Previously, the error message displayed during a failed attempt to download the shipments.csv file mentioned the refunds.csv file instead of the shipments.csv file. This has been fixed.

Known Limitations

- **Inventory/From Stock**: Although Console users can specify the inventory they want to draw from, this option is not available when using the CSV file with the API or when creating bulk shipments. These latter two methods only permit specifying the kind of stock (initial, replacement, buffer). When inventory is not specified or cannot be specified, the system uses the “first in, first out” rule, which means it will deduct from the oldest PO first.

- **CSV**: The CSV bulk upload does not support combining subscription and non-subscription products in a single shipment. **Workaround**: Use the API or the Console (from the Dashboard or the Shipments tab, Create shipment request > Single shipment) to create single shipment request that includes both types of products.

- **API**: When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET /v1/purchaseorders/{purchaseorderId} is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).

- **Channel Partners**: To order keys via API from inventory purchased through channel partners, the new /shipments_exact APIs must be used. The older, deprecated /shipments API only supports ordering keys from inventory purchased directly from Yubico. For more information, see Inventory: Channel Partners.

- **India shipments**: Some of our shipments to India use India Post for the last mile. India Post does not support our automated shipment tracking service, and therefore the tracking ID that YubiEnterprise Delivery displays is not actually a link. **Workaround**: Copy the India Post tracking number (typically 13 digits starting with E, R, or C) and paste it into either the India Post website - https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx ("Evaluate the expression" means do the arithmetic displayed in the box to prove that you are not a bot) or any of the other tracking service sites that support India Post, such as Ship24.com - (https://www.ship24.com/couriers/india-post-tracking).

- Google Workspace cannot support both the Service Provider-initiated ACS URL and the Identity Provider-initiated ACS URL at the same time. Neither is it possible to set up two different SAML Apps in the same Google Workspace, because Google Workspace enforces SP EntityID uniqueness across all SAML Apps in the workspace. For more information, see the Known Limitations section of the SSO topic.

1.21.4 Release 2.4.2 (3 October 2023)

New Features & Enhancements

- The file size of the animated YubiKey on the YED Console login screen has been reduced.
Resolved Issues

- The IDP note on the Configure SAML Single Sign-On page under Settings in the YED Console has been updated to the following statement: “Note that each IDP has different labels for these fields, and the sequence of fields varies from one IDP to the next.”

- The YED console login page was struggling to load due to the file size of the page’s animated YubiKey. This has been fixed so the login page loads as expected.

Known Limitations

- **Inventory/From Stock**: Although Console users can specify the inventory they want to draw from, this option is not available when using the CSV file with the API or when creating bulk shipments. These latter two methods only permit specifying the kind of stock (initial, replacement, buffer). When inventory is not specified or cannot be specified, the system uses the “first in, first out” rule, which means it will deduct from the oldest PO first.

- **CSV**: The CSV bulk upload does not support combining subscription and non-subscription products in a single shipment. **Workaround**: Use the API or the Console (from the Dashboard or the Shipments tab, Create shipment request > Single shipment) to create single shipment request that includes both types of products.

- **API**: When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET /v1/purchaseorders/{purchaseorderId} is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).

- **Channel Partners**: To order keys via API from inventory purchased through channel partners, the new /shipments_exact APIs must be used. The older, deprecated /shipments API only supports ordering keys from inventory purchased directly from Yubico. For more information, see Inventory: Channel Partners.

- **India shipments**: Some of our shipments to India use India Post for the last mile. India Post does not support our automated shipment tracking service, and therefore the tracking ID that YubiEnterprise Delivery displays is not actually a link. **Workaround**: Copy the India Post tracking number (typically 13 digits starting with E, R, or C) and paste it into either the India Post website - https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx (“Evaluate the expression” means do the arithmetic displayed in the box to prove that you are not a bot) or any of the other tracking service sites that support India Post, such as Ship24.com - (https://www.ship24.com/couriers/india-post-tracking).

- Google Workspace cannot support both the Service Provider-initiated ACS URL and the Identity Provider-initiated ACS URL at the same time. Neither is it possible to set up two different SAML Apps in the same Google Workspace, because Google Workspace enforces SP EntityID uniqueness across all SAML Apps in the workspace. For more information, see the Known Limitations section of the SSO topic.

1.21.5 Release 2.4.1 (28 September 2023)

Resolved Issues

- Previously, if a user toggled the Only show shippable inventory switch on the customer dashboard, but the customer did not have any remaining shippable inventory, the toggle and the inventory section of the dashboard disappeared. This has been fixed so the inventory section and toggle remain visible, and a message indicating “No shippable inventory found” is displayed.
Known Limitations

- **Inventory/From Stock**: Although Console users can specify the inventory they want to draw from, this option is not available when using the CSV file with the API or when creating bulk shipments. These latter two methods only permit specifying the kind of stock (initial, replacement, buffer). When inventory is not specified or cannot be specified, the system uses the “first in, first out” rule, which means it will deduct from the oldest PO first.

- **CSV**: The CSV bulk upload does not support combining subscription and non-subscription products in a single shipment. **Workaround**: Use the API or the Console (from the Dashboard or the Shipments tab, Create shipment request > Single shipment) to create single shipment request that includes both types of products.

- **API**: When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for `GET /v1/purchaseorders/{purchaseorderId}` is sent, the response includes (`is_vat_valid`, `is_tax_exempt`, `is_post_pay`).

- **Channel Partners**: To order keys via API from inventory purchased through channel partners, the new `/shipments_exact` APIs must be used. The older, deprecated `/shipments` API only supports ordering keys from inventory purchased directly from Yubico. For more information, see [Inventory: Channel Partners](#).

- **India shipments**: Some of our shipments to India use India Post for the last mile. India Post does not support our automated shipment tracking service, and therefore the tracking ID that YubiEnterprise Delivery displays is not actually a link. **Workaround**: Copy the India Post tracking number (typically 13 digits starting with E, R, or C) and paste it into either the India Post website - https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx (“Evaluate the expression” means do the arithmetic displayed in the box to prove that you are not a bot) or any of the other tracking service sites that support India Post, such as Ship24.com - (https://www.ship24.com/couriers/india-post-tracking).

- **Google Workspace cannot support both the Service Provider-initiated ACS URL and the Identity Provider-initiated ACS URL at the same time. Neither is it possible to set up two different SAML Apps in the same Google Workspace, because Google Workspace enforces SP EntityID uniqueness across all SAML Apps in the workspace. For more information, see the Known Limitations section of the SSO topic.

### 1.21.6 Release 2.4.0 (28 September 2023)

New Features & Enhancements

- **1-Tier and 2-Tier Sales**: YubiEnterprise Console now supports inventory purchase and consumption for Yubico and its channel partners - Distributors and Resellers as well as End-customers.

- **Console**: The Terms & Conditions for use of YubiEnterprise Services/Delivery have been updated and with the release of version 2.4.0, all new and returning users will need to indicate acceptance, otherwise they will not be able to log in to the Console. Each user’s acceptance will be logged with the relevant timestamp.

- **Console**: Console Owners can now assign, add, view and remove the Distributor role as needed for efficient user management within the organization.

- **Console**: Console Owners can now assign, add, view and remove the Reseller role as needed for efficient user management within the organization.

- **Console**: Distributor view of Reseller list: so that distributors can efficiently manage and monitor the resellers associated with their distributing activities, the Console displays a list of their resellers. For more information, see Roles/Permissions.

- **Console**: Reseller view of End Customer list: so that resellers can efficiently manage and monitor the end-customers associated with their reselling activities, the Console displays a list of their end-customers. For more information, see Roles/Permissions.
• **Console**: Because a user can have multiple roles/views in the same organization, the **Users** page lists the ones that apply for each user.

• **Console**: Automatic Selection of Login Role: If the user logging in to the Console has multiple roles, the highest priority role is selected, with the top role being Org Owner, followed by Org Admin, Org Auditor, Distributor, Reseller in that order. The user then arrives at the appropriate landing page.

• **Console**: SSO: The release of YubiEnterprise Services 2.4.0 heralds support for SSO initiated both by the Service Provider (SP-initiated SSO) and by the Identity Provider (IDP-initiated SSO).

• **Console**: IDP-initiated SSO: Org owners can now enable IDP-initiated SSO by logging in to the **Console** with credentials, going to the **Settings > SSO** tab, configuring IDP-initiated SSO, and clicking the new checkbox for it. For more information, see [IDP-initiated SSO and SP-initiated SSO](#).

• **Console**: SSO: Org owners logged in to the Console via SSO are now able to see whether IDP-initiated SSO has been enabled and view the URL for IDP-initiated SSO by going to the **Settings > SSO** tab.

• **Console**: All users are able to see on the **Purchase Orders** page the **YE Delivery** column showing whether the PO in question is available for shipping via YubiEnterprise Delivery.

• **Console**: The **Shipment Creation** page displays new information on the number of items available to be delivered: subscription products plus helper text for standard products.

• **Console**: On the **Dashboard**, there is no **Create Shipment Request** button if there are no products available for delivery.

• In the `refunds.csv` file, the `channelpartner_name` column has been renamed `reseller_name` and the `channelpartner_id` column has been renamed `reseller_id`. The values in the columns continue to be those for the channel partner name and ID.

• In the shipments download file (`shipments.csv`) the `channelpartner_name` column has been renamed `reseller_name`, and the `channelpartner_id` column has been renamed `reseller_id`. The expected values in these columns remain unchanged, i.e., the channel partner name and the channel partner ID.

• In the `bulk_shipment_template.csv` file that is downloaded when preparing to submit shipment requests in bulk, the `ChannelPartnerID` column has been renamed `ResellerID`. The expected values for this column remain the same.

### Resolved Issues

• **Console**: New and returning customers are now asked to read and agree to the updated YubiEnterprise Console Acceptable Use Policy. Once the policy has been agreed to, the customer may access the console.

• **Console**: In the **Shipments** table, the tracking number was occasionally missing even though the status showed that the shipment had been delivered; however, the detail view of such a shipment would show the tracking number. This issue has now been resolved; the tracking number always shows up on the main page as well.

### Known Issues

• If a user toggles the **Only show shippable inventory** switch on the customer dashboard, but the customer does not have any remaining shippable inventory, the toggle and the inventory section of the dashboard disappear. **Workaround**: reload the page or navigate away from the page and return to it.
Known Limitations

- **Inventory/From Stock**: Although Console users can specify the inventory they want to draw from, this option is not available when using the CSV file with the API or when creating bulk shipments. These latter two methods only permit specifying the kind of stock (initial, replacement, buffer). When inventory is not specified or cannot be specified, the system uses the “first in, first out” rule, which means it will deduct from the oldest PO first.

- **CSV**: The CSV bulk upload does not support combining subscription and non-subscription products in a single shipment. **Workaround**: Use the API or the Console (from the Dashboard or the Shipments tab, Create shipment request > Single shipment) to create single shipment request that includes both types of products.

- **API**: When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET /v1/purchaseorders/{purchaseorderId} is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).

- **Channel Partners**: To order keys via API from inventory purchased through channel partners, the new /shipments_exact APIs must be used. The older, deprecated /shipments API only supports ordering keys from inventory purchased directly from Yubico. For more information, see Inventory: Channel Partners.

- **India shipments**: Some of our shipments to India use India Post for the last mile. India Post does not support our automated shipment tracking service, and therefore the tracking ID that YubiEnterprise Delivery displays is not actually a link. **Workaround**: Copy the India Post tracking number (typically 13 digits starting with E, R, or C) and paste it into either the India Post website - https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx (“Evaluate the expression” means do the arithmetic displayed in the box to prove that you are not a bot) or any of the other tracking service sites that support India Post, such as Ship24.com - (https://www.ship24.com/couriers/india-post-tracking).

- **Google Workspace cannot support both the Service Provider-initiated ACS URL and the Identity Provider-initiated ACS URL at the same time. Neither is it possible to set up two different SAML Apps in the same Google Workspace, because Google Workspace enforces SP EntityID uniqueness across all SAML Apps in the workspace. For more information, see the Known Limitations section of the SSO topic.

1.21.7 Release 2.3.0 (31 August 2023)

New Features & Enhancements

- **Console**: Typically the shipment carrier needs the recipient’s telephone number for delivery. The **Contact phone** field for single shipments now has a tooltip explaining its purpose and the consequences of omission. “This phone number will be used by the carrier to complete the last stage of delivery. Submitting an invalid phone number may result in the order being returned to sender.” See Contact Phone for context.

Known Issues

- **Console**: If you are on the second page of viewing a table (showing, for example, items 101-200) and you reload your browser, that second page you were on now displays as page 1 and the items that were 101-200 now display as items 1-100. The first page of the table has thus become inaccessible. **Workaround**: Change the size of the page.
Known Limitations

- **Inventory/From Stock**: Although Console users can specify the inventory they want to draw from, this option is not available when using the CSV file with the API or when creating bulk shipments. These latter two methods only permit specifying the kind of stock (initial, replacement, buffer). When inventory is not specified or cannot be specified, the system uses the “first in, first out” rule, which means it will deduct from the oldest PO first.

- **CSV**: The CSV bulk upload does not support combining subscription and non-subscription products in a single shipment. **Workaround**: Use the API or the Console (from the Dashboard or the Shipments tab, Create shipment request > Single shipment) to create single shipment request that includes both types of products.

- **API**: When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET /v1/purchaseorders/{purchaseorderId} is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).

- **Channel Partners**: To order keys via API from inventory purchased through channel partners, the new /shipments_exact APIs must be used. The older, deprecated /shipments API only supports ordering keys from inventory purchased directly from Yubico. For more information, see Inventory: Channel Partners.

- **India shipments**: Some of our shipments to India use India Post for the last mile. India Post does not support our automated shipment tracking service, and therefore the tracking ID that YubiEnterprise Delivery displays is not actually a link. **Workaround**: Copy the India Post tracking number (typically 13 digits starting with E, R, or C) and paste it into either the India Post website - https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx (“Evaluate the expression” means do the arithmetic displayed in the box to prove that you are not a bot) or any of the other tracking service sites that support India Post, such as Ship24.com - (https://www.ship24.com/couriers/india-post-tracking).

1.21.8 Release 2.2.0 (27 July 2023)

Resolved Issues

- **Console**: The Dashboard was incorrectly counting some (but not all) refunded keys as remaining inventory. This issue has now been fixed, so that no refunded keys are counted as remaining inventory.

- **Console**: When using filters on the Shipments tab or the Purchase Orders tab, the operators that offered an alternative to “contains” used to spring back to the default, which is “equals”. This behavior has now been fixed, so that it is now possible to use the “contains” operator for Country code, Recipient, and Recipient email.

Known Limitations

- **Inventory/From Stock**: Although Console users can specify the inventory they want to draw from, this option is not available when using the CSV file with the API or when creating bulk shipments. These latter two methods only permit specifying the kind of stock (initial, replacement, buffer). When inventory is not specified or cannot be specified, the system uses the “first in, first out” rule, which means it will deduct from the oldest PO first.

- **CSV**: The CSV bulk upload does not support combining subscription and non-subscription products in a single shipment. **Workaround**: Use the API or the Console (from the Dashboard or the Shipments tab, Create shipment request > Single shipment) to create single shipment request that includes both types of products.

- **API**: When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET /v1/purchaseorders/{purchaseorderId} is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).

- **Channel Partners**: To order keys via API from inventory purchased through channel partners, the new /shipments_exact APIs must be used. The older, deprecated /shipments API only supports ordering keys from inventory purchased directly from Yubico. For more information, see Inventory: Channel Partners.
- **India shipments**: Some of our shipments to India use India Post for the last mile. India Post does not support our automated shipment tracking service, and therefore the tracking ID that YubiEnterprise Delivery displays is not actually a link. **Workaround**: Copy the India Post tracking number (typically 13 digits starting with E, R, or C) and paste it into either the India Post website - https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx ("Evaluate the expression" means do the arithmetic displayed in the box to prove that you are not a bot) or any of the other tracking service sites that support India Post, such as Ship24.com - (https://www.ship24.com/couriers/india-post-tracking).

### 1.21.9 Release 2.1.4 (11 July 2023)

**Resolved Issues**

- **API**: When creating a shipment request using the API, if the `delivery_type` (normal or expedited) was not given, the API was not applying the default (normal) to the request as expected. For countries to which only a single key at a time can be shipped and where only the normal delivery type is supported, shipment creation was therefore failing. This issue has now been fixed.

**Known Issues**

- **Console**: The Dashboard is incorrectly counting some (but not all) refunded keys as remaining inventory.

**Known Limitations**

- **Inventory/From Stock**: Although Console users can specify the inventory they want to draw from, this option is not available when using the CSV file with the API or when creating bulk shipments. These latter two methods only permit specifying the kind of stock (initial, replacement, buffer). When inventory is not specified or cannot be specified, the system uses the “first in, first out” rule, which means it will deduct from the oldest PO first.

- **CSV**: The CSV bulk upload does not support combining subscription and non-subscription products in a single shipment. **Workaround**: Use the API or the Console (from the **Dashboard** or the **Shipments** tab, Create shipment request > Single shipment) to create single shipment request that includes both types of products.

- **API**: When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET `/v1/purchaseorders/{purchaseorderId}` is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).

- **Channel Partners**: To order keys via API from inventory purchased through channel partners, the new `/shipments_exact` APIs must be used. The older, deprecated `/shipments` API only supports ordering keys from inventory purchased directly from Yubico. For more information, see **Inventory: Channel Partners**.

- **India shipments**: Some of our shipments to India use India Post for the last mile. India Post does not support our automated shipment tracking service, and therefore the tracking ID that YubiEnterprise Delivery displays is not actually a link. **Workaround**: Copy the India Post tracking number (typically 13 digits starting with E, R, or C) and paste it into either the India Post website - https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx ("Evaluate the expression" means do the arithmetic displayed in the box to prove that you are not a bot) or any of the other tracking service sites that support India Post, such as Ship24.com - (https://www.ship24.com/couriers/india-post-tracking).
1.21.10 Release 2.1.2 (29 June 2023)

Resolved Issues

- **API**: Usage of the `validate-address` API for addresses in the following locations was failing with an undeliverable 400 response. Orders entered directly into the system and validated as part of the usual order processing were unaffected. This issue has now been resolved.
  - Australia
  - Japan
  - New Zealand
  - Indonesia
  - Philippines
  - Singapore
  - Thailand
  - India
  - Mexico
  - Chile

- **Console**: When filters were used, there was a problem clearing (resetting) the filter when no search results were found. For example, if advanced search was used on the Shipment tab or the Purchase Orders tab, and the search term yielded no results, the search term in the filter could not be changed - unless the browser window was reduced before clicking CLEAR ALL again. This issue has now been resolved; it is no longer necessary to shrink the browser window in order to change the search term.

Known Issues

- **Console**: The Dashboard is incorrectly counting some (but not all) refunded keys as remaining inventory.

Known Limitations

- **Inventory/From Stock**: Although Console users can specify the inventory they want to draw from, this option is not available when using the CSV file with the API or when creating bulk shipments. These latter two methods only permit specifying the kind of stock (initial, replacement, buffer). When inventory is not specified or cannot be specified, the system uses the “first in, first out” rule, which means it will deduct from the oldest PO first.

- **CSV**: The CSV bulk upload does not support combining subscription and non-subscription products in a single shipment. **Workaround**: Use the API or the Console (from the Dashboard or the Shipment tab, Create shipment request > Single shipment) to create single shipment request that includes both types of products.

- **API**: When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for `GET /v1/purchaseorders/{purchaseorderId}` is sent, the response includes `is_vat_valid`, `is_tax_exempt`, `is_post_pay`.

- **Channel Partners**: To order keys via API from inventory purchased through channel partners, the new `/shipments_exact` APIs must be used. The older, deprecated `/shipments` API only supports ordering keys from inventory purchased directly from Yubico. For more information, see Inventory: Channel Partners.

- **India shipments**: Some of our shipments to India use India Post for the last mile. India Post does not support our automated shipment tracking service, and therefore the tracking ID that YubiEnterprise Delivery displays is not actually a link. **Workaround**: Copy the India Post tracking number (typically 13 digits starting with
YubiEnterprise Console now supports SSO for Google Workspace. For further information and instructions, see Enabling SSO with Google Workspace.

Using the Console, Org Owners can now enable SSO for a variety of Identity Providers (IDPs). For more information, see SSO Configuration Tab.

To improve user experience and flow for upcoming features, the horizontal navigation menu is now a left sidebar.

Resolved Issues

- The orgId field in the response to the following APIs was deprecated by the OpenAPI specs. The following APIs no longer return values for that field. Therefore it is advisable not to write more code that depends on the orgId field:
  - GET v1/inventory
  - GET v1/inventory/channelpartners/{channelpartnerId}
  - GET v1/purchaseorders
  - GET v1/purchaseorders/{purchaseorderId}
  - GET/POST v1/shipments
  - GET/PUT v1/shipments/{shipmentId}
  - GET/POST v1/shipments_exact
  - GET/PUT v1/shipments_exact/{shipmentId}
  - GET v1/accountbalances

Known Issues

- Console: The Dashboard is incorrectly counting some (but not all) refunded keys as remaining inventory.

Known Limitations

- Inventory/From Stock: Although Console users can specify the inventory they want to draw from, this option is not available when using the CSV file with the API or when creating bulk shipments. These latter two methods only permit specifying the kind of stock (initial, replacement, buffer). When inventory is not specified or cannot be specified, the system uses the “first in, first out” rule, which means it will deduct from the oldest PO first.

- CSV: The CSV bulk upload does not support combining subscription and non-subscription products in a single shipment. **Workaround:** Use the API or the Console (from the Dashboard or the Shipments tab, Create shipment request > Single shipment) to create single shipment request that includes both types of products.
• **API:** When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET / v1/purchaseorders/{purchaseorderId} is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).

• **Channel Partners:** To order keys via API from inventory purchased through channel partners, the new / shipments_exact APIs must be used. The older, deprecated / shipments API only supports ordering keys from inventory purchased directly from Yubico. For more information, see *Inventory: Channel Partners.*

• **India shipments:** Some of our shipments to India use India Post for the last mile. India Post does not support our automated shipment tracking service, and therefore the tracking ID that YubiEnterprise Delivery displays is not actually a link. **Workaround:** Copy the India Post tracking number (typically 13 digits starting with E, R, or C) and paste it into either the India Post website - [https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx](https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx) ("Evaluate the expression" means do the arithmetic displayed in the box to prove that you are not a bot) or any of the other tracking service sites that support India Post, such as Ship24.com - [https://www.ship24.com/couriers/india-post-tracking](https://www.ship24.com/couriers/india-post-tracking).

### 1.21.12 Release 2.0.4 (5 June 2023)

#### Known Issues

• **Console:** The Dashboard is incorrectly counting some (but not all) refunded keys as remaining inventory.

• **The orgId field in the response to the following APIs has been deprecated by the OpenAPI specs. Although these APIs currently return values for that field, future versions of the API will not return the orgID field. Therefore it is advisable not to write more code that depends on that field:**

  - GET v1/inventory
  - GET v1/inventory/channelpartners/{channelpartnerId}
  - GET v1/purchaseorders
  - GET v1/purchaseorders/{purchaseorderId}
  - GET/POST v1/shipments
  - GET/PUT v1/shipments/{shipmentId}
  - GET/POST v1/shipments_exact
  - GET/PUT v1/shipments_exact/{shipmentId}
  - GET v1/accountbalances

#### Known Limitations

• **Inventory/From Stock:** Although Console users can specify the inventory they want to draw from, this option is not available when using the CSV file with the API or when creating bulk shipments. These latter two methods only permit specifying the kind of stock (initial, replacement, buffer). When inventory is not specified or cannot be specified, the system uses the “first in, first out” rule, which means it will deduct from the oldest PO first.

• **CSV:** The CSV bulk upload does not support combining subscription and non-subscription products in a single shipment. **Workaround:** Use the API or the Console (from the Dashboard or the Shipments tab, Create shipment request > Single shipment) to create single shipment request that includes both types of products.

• **API:** When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET / v1/purchaseorders/{purchaseorderId} is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).
- **Channel Partners**: To order keys via API from inventory purchased through channel partners, the new `/shipments_exact` APIs must be used. The older, deprecated `/shipments` API only supports ordering keys from inventory purchased directly from Yubico. For more information, see Inventory: Channel Partners.

- **India shipments**: Some of our shipments to India use India Post for the last mile. India Post does not support our automated shipment tracking service, and therefore the tracking ID that YubiEnterprise Delivery displays is not actually a link. **Workaround**: Copy the India Post tracking number (typically 13 digits starting with E, R, or C) and paste it into either the India Post website - https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx (“Evaluate the expression” means do the arithmetic displayed in the box to prove that you are not a bot) or any of the other tracking service sites that support India Post, such as Ship24.com - (https://www.ship24.com/couriers/india-post-tracking).

### 1.21.13 Release 2.0.3 (2 June 2023)

#### Resolved Issues

**Console**: Individual shipment request: Even though the Region/State line of the address had actually been entered and the shipment request submitted, that line was shown as empty in the shipment request record. Updating the request did not resolve the issue; the field remained blank. This issue has now been resolved and the data entered in the Region/State line of the address is now displayed in the record of the submitted request.

#### Known Issues

- The orgId field in the response to the following APIs has been deprecated by the OpenAPI specs. Although these APIs currently return values for that field, future versions of the API will not return the orgID field. Therefore it is advisable not to write more code that depends on that field:
  - GET v1/inventory
  - GET v1/inventory/channelpartners/{channelpartnerId}
  - GET v1/purchaseorders
  - GET v1/purchaseorders/{purchaseorderId}
  - GET/POST v1/shipments
  - GET/PUT v1/shipments/{shipmentId}
  - GET/POST v1/shipments_exact
  - GET/PUT v1/shipments_exact/{shipmentId}
  - GET v1/accountbalances

#### Known Limitations

- **Inventory/From Stock**: Although Console users can specify the inventory they want to draw from, this option is not available when using the CSV file with the API or when creating bulk shipments. These latter two methods only permit specifying the kind of stock (initial, replacement, buffer). When inventory is not specified or cannot be specified, the system uses the “first in, first out” rule, which means it will deduct from the oldest PO first.

- **CSV**: The CSV bulk upload does not support combining subscription and non-subscription products in a single shipment. **Workaround**: Use the API or the Console (from the Dashboard or the Shipments tab, Create shipment request > Single shipment) to create single shipment request that includes both types of products.
• **API**: When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for `GET /v1/purchaseorders/{purchaseorderId}` is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).

• **Channel Partners**: To order keys via API from inventory purchased through channel partners, the new `/shipments_exact` APIs must be used. The older, deprecated `/shipments` API only supports ordering keys from inventory purchased directly from Yubico. For more information, see *Inventory: Channel Partners*.

• **India shipments**: Some of our shipments to India use India Post for the last mile. India Post does not support our automated shipment tracking service, and therefore the tracking ID that YubiEnterprise Delivery displays is not actually a link. **Workaround**: Copy the India Post tracking number (typically 13 digits starting with E, R, or C) and paste it into either the India Post website - [https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx](https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx) (“Evaluate the expression” means do the arithmetic displayed in the box to prove that you are not a bot) or any of the other tracking service sites that support India Post, such as Ship24.com - [https://www.ship24.com/couriers/india-post-tracking](https://www.ship24.com/couriers/india-post-tracking).

### 1.21.14 Release 2.0.0 (25 May 2023)

#### New Features & Enhancements

- **Console Subscription Management**: The dashboard view has been upgraded to enable a better overview of the different subscription plans/tiers within the primary, backup and replacement categories, along with the licenses available as a portion of the total licenses. In addition, the supported form factors are shown for each plan/tier/category. Not only does this improved user interface facilitate subscription management, but it also makes ordering product shipment easier in that the request can be started directly from the inventory display. For more information including screenshots and explanations, see *Dashboard*.

- **Enhanced Search** The search function on the Shipments tab and the Purchase orders tab in the YubiEnterprise Console has been enhanced to enable advanced search. All the columns can be displayed and/or hidden; the Filters enable use of “Contains” or “Equals” operators; and the Density option enables setting the display view to compact, standard or comfortable. For more information, see *Shipments Tab Table Controls* for the Shipments tab and *Purchase Order Tab Table Controls* for the Purchase orders tab.

- **Sub-processors**: We are pleased to notify users that we have published a sub-processor webpage located [here](https://yubico.com/sub-processors) which lists sub-processors used on Yubico’s behalf as part of Yubico’s product and service offerings. To stay up-to-date on Yubico sub-processors, users can subscribe to an RSS feed or check the webpage for updates.

#### Resolved Issues

- The API endpoints `GET /v1/inventory` and `GET /v1/inventory/:channelpartnerId` no longer return a response that includes the field `product_tier`. The API is therefore now in conformity with the documented behavior.

#### Known Issues

- The orgId field in the response to the following APIs has been deprecated by the OpenAPI specs. Although these APIs currently return values for that field, future versions of the API will not return the orgID field. Therefore it is advisable not to write more code that depends on that field:
  - `GET v1/inventory`
  - `GET v1/inventory/channelpartners/{channelpartnerId}`
  - `GET v1/purchaseorders`
  - `GET v1/purchaseorders/{purchaseorderId}`
YubiEnterprise Services

- GET/POST v1/shipments
- GET/PUT v1/shipments/{shipmentId}
- GET/POST v1/shipments_exact
- GET/PUT v1/shipments_exact/{shipmentId}
- GET v1/accountbalances

Known Limitations

- **Inventory/From Stock**: Although Console users can specify the inventory they want to draw from, this option is not available when using the CSV file with the API or when creating bulk shipments. These latter two methods only permit specifying the kind of stock (initial, replacement, buffer). When inventory is not specified or cannot be specified, the system uses the “first in, first out” rule, which means it will deduct from the oldest PO first.

- **CSV**: The CSV bulk upload does not support combining subscription and non-subscription products in a single shipment. **Workaround**: Use the API or the Console (from the Dashboard or the Shipments tab, Create shipment request > Single shipment) to create single shipment request that includes both types of products.

- **API**: When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET / v1/purchaseorders/{purchaseorderId} is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).

- **Channel Partners**: To order keys via API from inventory purchased through channel partners, the new / shipments_exact APIs must be used. The older, deprecated /shipments API only supports ordering keys from inventory purchased directly from Yubico. For more information, see Inventory: Channel Partners.

- **India shipments**: Some of our shipments to India use India Post for the last mile. India Post does not support our automated shipment tracking service, and therefore the tracking ID that YubiEnterprise Delivery displays is not actually a link. **Workaround**: Copy the India Post tracking number (typically 13 digits starting with E, R, or C) and paste it into either the India Post website - https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx (“Evaluate the expression” means do the arithmetic displayed in the box to prove that you are not a bot) or any of the other tracking service sites that support India Post, such as Ship24.com - (https://www.ship24.com/couriers/india-post-tracking).

1.21.15 Release 1.33.0 (20 April 2023)

New Features & Enhancements

- **Console**: Shipment Recipient name OR Recipient company name: a new tooltip clarifies requirements for these fields: “At minimum, either a recipient first name and last name is required OR a recipient company name. When sending to a residential address, provide a first and last name but not a company name (can cause delivery issues). A company name should only be provided when sending to a commercial/business address.” This means that for business (corporate) addresses, both recipient name and company name can be provided, whereas for residential addresses, the company name must be left blank.
Resolved Issues

- **Login**: When a WebAuthn credential nickname has more than 255 characters, a 500 error would be returned. This validation issue has now been fixed, so that the SQL exception that occurs when attempting to write the new name to the database now returns a 400.

Known Limitations

- **Inventory/From Stock**: Although Console users can specify the inventory they want to draw from, this option is not available when using the CSV file with the API or when creating bulk shipments. These latter two methods only permit specifying the kind of stock (initial, replacement, buffer). When inventory is not specified or cannot be specified, the system uses the “first in, first out” rule, which means it will deduct from the oldest PO first.

- **CSV**: The CSV bulk upload does not support combining subscription and non-subscription products in a single shipment. **Workaround**: Use the API or the Console (from the Dashboard or the Shipments tab, Create shipment request > Single shipment) to create single shipment request that includes both types of products.

- **API**: When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET /v1/purchaseorders/{purchaseorderId} is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).

- **Channel Partners**: To order keys via API from inventory purchased through channel partners, the new /shipments_exact APIs must be used. The older, deprecated /shipments API only supports ordering keys from inventory purchased directly from Yubico. For more information, see [Inventory: Channel Partners](#).

- **India shipments**: Some of our shipments to India use India Post for the last mile. India Post does not support our automated shipment tracking service, and therefore the tracking ID that YubiEnterprise Delivery displays is not actually a link. **Workaround**: Copy the India Post tracking number (typically 13 digits starting with E, R, or C) and paste it into either the India Post website - [https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx](https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx) (“Evaluate the expression” means do the arithmetic displayed in the box to prove that you are not a bot) or any of the other tracking service sites that support India Post, such as Ship24.com - [https://www.ship24.com/couriers/india-post-tracking](https://www.ship24.com/couriers/india-post-tracking).

1.21.16 Release 1.32.0 (23 March 2023)

New Features & Enhancements

- **SSO**: YubiEnterprise Services now supports Single Sign-On (SSO). For details, see [Single Sign-On (SSO)](#).

- **System Email Upgraded** to UTF-8 in order to support many languages and more email clients.

- **Additional YubiKey Models**
  - The YubiKey 5C NFC is available in Advanced, Premium, and FIPS tiers.
  - The Security Key C NFC by Yubico is available in Base, Advanced, Premium and FIPS tiers.

- **Demo Password Reset**: Org Owners can now reset passwords for Demo users. Those users follow the reset link from the email the system sends them and register passwords. They are not required to have YubiKeys in order to authenticate.
Resolved Issues

- Expedited shipping is not supported for certain countries. Those countries are listed in *Modes of Delivery: Normal vs Expedited*. It is therefore no longer possible to select this option when shipping to those countries.

Known Limitations

- **Inventory/From Stock**: Although Console users can specify the inventory they want to draw from, this option is not available when using the CSV file with the API or when creating bulk shipments. These latter two methods only permit specifying the kind of stock (initial, replacement, buffer). When inventory is not specified or cannot be specified, the system uses the “first in, first out” rule, which means it will deduct from the oldest PO first.

- **CSV**: The CSV bulk upload does not support combining subscription and non-subscription products in a single shipment. **Workaround**: Use the API or the Console (from the Dashboard or the Shipments tab, Create shipment request > Single shipment) to create single shipment request that includes both types of products.

- **API**: When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET `/v1/purchaseorders/{purchaseorderId}` is sent, the response includes (`is_vat_valid`, `is_tax_exempt`, `is_post_pay`).

- **Channel Partners**: To order keys via API from inventory purchased through channel partners, the new `/shipments_exact` APIs must be used. The older, deprecated `/shipments` API only supports ordering keys from inventory purchased directly from Yubico. For more information, see *Inventory: Channel Partners*.

- **India shipments**: Some of our shipments to India use India Post for the last mile. India Post does not support our automated shipment tracking service, and therefore the tracking ID that YubiEnterprise Delivery displays is not actually a link. **Workaround**: Copy the India Post tracking number (typically 13 digits starting with E, R, or C) and paste it into either the India Post website - [https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx](https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx) (“Evaluate the expression” means do the arithmetic displayed in the box to prove that you are not a bot) or any of the other tracking service sites that support India Post, such as Ship24.com - [https://www.ship24.com/couriers/india-post-tracking](https://www.ship24.com/couriers/india-post-tracking).

1.21.17 Release 1.31.0 (16 February 2023)

Known Limitations

- **Inventory/From Stock**: Although Console users can specify the inventory they want to draw from, this option is not available when using the CSV file with the API or when creating bulk shipments. These latter two methods only permit specifying the kind of stock (initial, replacement, buffer). When inventory is not specified or cannot be specified, the system uses the “first in, first out” rule, which means it will deduct from the oldest PO first.

- **CSV**: The CSV bulk upload does not support combining subscription and non-subscription products in a single shipment. **Workaround**: Use the API or the Console (from the Dashboard or the Shipments tab, Create shipment request > Single shipment) to create single shipment request that includes both types of products.

- **API**: When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET `/v1/purchaseorders/{purchaseorderId}` is sent, the response includes (`is_vat_valid`, `is_tax_exempt`, `is_post_pay`).

- **Channel Partners**: To order keys via API from inventory purchased through channel partners, the new `/shipments_exact` APIs must be used. The older, deprecated `/shipments` API only supports ordering keys from inventory purchased directly from Yubico. For more information, see *Inventory: Channel Partners*.

- **India shipments**: Some of our shipments to India use India Post for the last mile. India Post does not support our automated shipment tracking service, and therefore the tracking ID that YubiEnterprise Delivery displays is not actually a link. **Workaround**: Copy the India Post tracking number (typically 13 digits starting with
E, R, or C) and paste it into either the India Post website - https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx (“Evaluate the expression” means do the arithmetic displayed in the box to prove that you are not a bot) or any of the other tracking service sites that support India Post, such as Ship24.com - (https://www.ship24.com/couriers/india-post-tracking).

1.21.18 Release 1.30.2 (24 January 2023)

New Features & Enhancements

• **New Products**: As of the current release, 1.30.2 on 24 January 2023, YubiEnterprise Services offers the following new products:
  – Security Key NFC by Yubico
  – Security Key C NFC by Yubico
  – Security Key NFC by Yubico - Enterprise Edition
  – Security Key C NFC by Yubico - Enterprise Edition

Subscription (2.0)

• **Subscription (2.0)**: YubiEnterprise Services is launching Subscription (2.0) with this release 1.30.2 on 24 January 2023. Available for 500 users or more, it provides:
  – Procurement that is fast, predictable, and cost-effective
  – The opportunity upgrade to higher tiers as needs evolve
  – Form factor flexibility
  – The option to purchase backup YubiKey subscriptions at a discount to ensure your backup authentication mechanism is as strong as your primary one and to enable easy self-service account recovery.
  – 24x7x365 Priority Technical Support, which offers easy access to Yubico security experts (Yubico Support Services Overview)
  – Extended warranty: Warranties cover the initial term of the subscription plus the first renewal - the duration of the subscription.

*Plus Plan*

– Replacement licenses allow you to cover up to 25% of subscribed users per year, with an option to add on additional users as needed a la carte, due to turnover, lost or stolen keys, and upgrades.
– Maximum discount on backup licenses
– 5% of base purchase as funds available to apply toward Professional Services
– Option for one bulk customization event per year included.

*Standard Plan*

– Choose the number of replacement licenses for turnover, lost or stolen keys, and upgrades.
Known Limitations

- **Inventory/From Stock**: Although Console users can specify the inventory they want to draw from, this option is not available when using the CSV file with the API or when creating bulk shipments. These latter two methods only permit specifying the kind of stock (initial, replacement, buffer). When inventory is not specified or cannot be specified, the system uses the “first in, first out” rule, which means it will deduct from the oldest PO first.

- **CSV**: The CSV bulk upload does not support combining subscription and non-subscription products in a single shipment. **Workaround**: Use the API or the Console (from the Dashboard or the Shipments tab, Create shipment request > Single shipment) to create single shipment request that includes both types of products.

- **API**: When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET /v1/purchaseorders/{purchaseorderId} is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).

- **Channel Partners**: To order keys via API from inventory purchased through channel partners, the new /shipments_exact APIs must be used. The older, deprecated /shipments API only supports ordering keys from inventory purchased directly from Yubico. For more information, see Inventory: Channel Partners.

- **India shipments**: Some of our shipments to India use India Post for the last mile. India Post does not support our automated shipment tracking service, and therefore the tracking ID that YubiEnterprise Delivery displays is not actually a link. **Workaround**: Copy the India Post tracking number (typically 13 digits starting with E, R, or C) and paste it into either the India Post website - https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx (“Evaluate the expression” means do the arithmetic displayed in the box to prove that you are not a bot) or any of the other tracking service sites that support India Post, such as Ship24.com - (https://www.ship24.com/couriers/india-post-tracking).

1.21.19 Release 1.30.0 (19 January 2023)

Resolved Issues

- **Console**: When a user and/or a password was reset, there was no indication whether the action had been successful. This issue has now been fixed: now a message confirming success is displayed after a user and/or a password is reset.

- **Console**: When you created a custom email and your HTML code was validated, the display of your actual code was stuck on the far right of the frame. This issue occurred whether the code had errors or not, and whether or not it exceeded the 65,000-character limit. This issue has now been fixed, and your HTML code is readable as expected, distributed evenly across the whole area of the frame.

- **Console**: The Advanced Search by address did not work as expected unless you had street lines 2 and 3 in the address. The workaround was to add a space after each potential line of the address, including lines whose potential was unrealized, i.e., unoccupied fields. Therefore, when you were searching on an address that did not have a street line 2 or 3 you would have needed to add three spaces between street_line1 and city. This issue has now been fixed.
Known Limitations

- **CSV**: The CSV bulk upload does not support combining subscription and non-subscription products in a single shipment. **Workaround**: Use the API or the Console (from the Dashboard or the Shipments tab, Create shipment request > Single shipment) to create single shipment request that includes both types of products.

- **API**: When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET /v1/purchaseorders/{purchaseorderId} is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).

- **Channel Partners**: To order keys via API from inventory purchased through channel partners, the new /shipments_exact APIs must be used. The older, deprecated /shipments API only supports ordering keys from inventory purchased directly from Yubico. For more information, see Inventory: Channel Partners.

- **India shipments**: Some of our shipments to India use India Post for the last mile. India Post does not support our automated shipment tracking service, and therefore the tracking ID that YubiEnterprise Delivery displays is not actually a link. **Workaround**: Copy the India Post tracking number (typically 13 digits starting with E, R, or C) and paste it into either the India Post website - https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx (“Evaluate the expression” means do the arithmetic displayed in the box to prove that you are not a bot) or any of the other tracking service sites that support India Post, such as Ship24.com - (https://www.ship24.com/couriers/india-post-tracking).

### 1.21.20 Release 1.29.2 (22 December 2022)

**Resolved Issues**

- The refunds CSV download button now works as expected.

**Known Issues**

- The .csv file created when downloading processed refunds is showing the wrong data in the inventory_product_type column. Instead of showing information such as “Standard Products”, “Shipping”, or “Primary Subscr - Adv. Tier: Initial, it is showing the name of the product that was refunded (e.g. YubiKey 5 NFC) or in the case of Shipping, it is showing and empty field.

**Known Limitations**

- **CSV**: The CSV bulk upload does not support combining subscription and non-subscription products in a single shipment. **Workaround**: Use the API or the Console (from the Dashboard or the Shipments tab, Create shipment request > Single shipment) to create single shipment request that includes both types of products.

- **API**: When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET /v1/purchaseorders/{purchaseorderId} is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).

- **Channel Partners**: To order keys via API from inventory purchased through channel partners, the new /shipments_exact APIs must be used. The older, deprecated /shipments API only supports ordering keys from inventory purchased directly from Yubico. For more information, see Inventory: Channel Partners.

- **India shipments**: Some of our shipments to India use India Post for the last mile. India Post does not support our automated shipment tracking service, and therefore the tracking ID that YubiEnterprise Delivery displays is not actually a link. **Workaround**: Copy the India Post tracking number (typically 13 digits starting with E, R, or C) and paste it into either the India Post website - https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx (“Evaluate the expression” means do the arithmetic displayed in the box to prove that you are not a bot) or any of the other tracking service sites that support India Post, such as Ship24.com - (https://www.ship24.com/couriers/india-post-tracking).
that you are not a bot) or any of the other tracking service sites that support India Post, such as Ship24.com -

1.21.21 Release 1.29.0 (15 December 2022)

New Features & Enhancements

- **Console and API** Shipments initiated without using YubiEnterprise Services are now tracked within the Console and via the API. In order to distinguish between requests shipped using YubiEnterprise and those shipped without, we have introduced two types of shipment: “Automated,” which are those requested using YubiEnterprise Delivery, and “Manual,” which are shipments requested directly from Yubico or a Channel Partner. Therefore the table on the Shipments tab and the CSV download both now have a new column, “Type,” upon which one can filter. For more information, see Shipments: Overview.

Resolved Issues

- **Console and API** The limit for the number of alphanumeric characters in the recipient email address, formerly 40, has been expanded to 80 characters. For more information, see the Shipment Request Fields table.

Known Limitations

- **CSV**: The CSV bulk upload does not support combining subscription and non-subscription products in a single shipment. **Workaround**: Use the API or the Console (from the Dashboard or the Shipments tab, Create shipment request > Single shipment) to create single shipment request that includes both types of products.

- **API**: When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET /v1/purchaseorders/{purchaseorderId} is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).

- **Channel Partners**: To order keys via API from inventory purchased through channel partners, the new /shipments_exact APIs must be used. The older, deprecated /shipments API only supports ordering keys from inventory purchased directly from Yubico. For more information, see Inventory: Channel Partners.

- **India shipments**: Some of our shipments to India use India Post for the last mile. India Post does not support our automated shipment tracking service, and therefore the tracking ID that YubiEnterprise Delivery displays is not actually a link. **Workaround**: Copy the India Post tracking number (typically 13 digits starting with E, R, or C) and paste it into either the India Post website - https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx (“Evaluate the expression” means do the arithmetic displayed in the box to prove that you are not a bot) or any of the other tracking service sites that support India Post, such as Ship24.com - (https://www.ship24.com/couriers/india-post-tracking).

1.21.22 Release 1.28.0 (17 November 2022)

New Features & Enhancements

- **Console**: A search produces a filtered list of shipments. Until now, when you investigated one of those results and then clicked the Go back button, the results of that search were no longer available. With the current release, YubiEnterprise Delivery 1.28.0, the list of search results is retained even after clicking into a particular result or refreshing the browser window while on a page of search results. (For more details, see Search.)
- **Console**: Customization of the SHIPPED/DELIVERED/DELIVERY EXCEPTION email template - An owner or an admin can edit the templates for these emails notifying a YubiKey recipient about a shipment. The HTML code for the new template is validated as the content is entered. When the user clicks **Update** the **Send sample** button becomes active so that the user can send themselves a sample email from the customized template. For more details, see *Customizing the Automated Emails*.

- **Console**: When creating a new shipment, the single shipment tab is shown by default instead of the bulk shipment tab.

### Resolved Issues

- **Console**: When logging into YubiEnterprise Delivery with the wrong email or password, the error message in the past was “Access denied.” Now the error message is “Incorrect email or password.”

- The status of some of the GB-destined shipments carried by Royal Mail was not updating promptly. Expected behavior is for the status to be shown as “Delivered” when that is the case; instead the status of shipments that had already been delivered was sometimes shown as “Shipped:In Transit”. This issue has now been fixed.

### Known Limitations

- **CSV**: The CSV bulk upload does not support combining subscription and non-subscription products in a single shipment. **Workaround**: Use the API or the Console (from the Dashboard or the Shipments tab, Create shipment request > Single shipment) to create single shipment request that includes both types of products.

- **API**: When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET /v1/purchaseorders/{purchaseorderId} is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).

- **Channel Partners**: To order keys via API from inventory purchased through channel partners, the new /shipments_exact APIs must be used. The older, deprecated /shipments API only supports ordering keys from inventory purchased directly from Yubico. For more information, see *Inventory: Channel Partners*.

- **India shipments**: Some of our shipments to India use India Post for the last mile. India Post does not support our automated shipment tracking service, and therefore the tracking ID that YubiEnterprise Delivery displays is not actually a link. **Workaround**: Copy the India Post tracking number (typically 13 digits starting with E, R, or C) and paste it into either the India Post website - https://www.indiapost.gov.in/_layouts/15/dop.portal_tracking/trackconsignment.aspx (“Evaluate the expression” means do the arithmetic displayed in the box to prove that you are not a bot) or any of the other tracking service sites that support India Post, such as Ship24.com - (https://www.ship24.com/couriers/india-post-tracking).

### 1.21.23 Release 1.27.3 (28 October 2022)

#### Resolved Issues

- There was a brief period of time in which the tracking numbers in the links for Blue Dart’s India shipments pointed at nonexistent shipments. Those tracking numbers have been corrected, so the links now point to the appropriate shipments.
Known Limitations

- **CSV**: The CSV bulk upload does not support combining subscription and non-subscription products in a single shipment. **Workaround**: Use the API or the Console (from the Dashboard or the Shipments tab, Create shipment request > Single shipment) to create single shipment request that includes both types of products.

- For European shipments using Bpost, also known as the Belgium Post Group, the tracking number is not hyperlinked. However, the delivery status does update correctly. **Workaround**: To find out where a Bpost shipment is, copy the tracking number and paste it into the field for that purpose on Bpost’s page for that purpose, http://www.bpost2.be/bpostinternational/track_trace/find.php?lng=en or into Parcelcsapp.com’s page for Bpost tracking, https://parcelsapp.com/en/carriers/belgium-post.

- **API**: When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET /v1/purchaseorders/{purchaseorderId} is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).

- **Channel Partners**: To order keys via API from inventory purchased through channel partners, the new /shipments_exact APIs must be used. The older, deprecated /shipments API only supports ordering keys from inventory purchased directly from Yubico. For more information, see Inventory: Channel Partners.

- **India shipments**: Some of our shipments to India use India Post for the last mile. India Post does not support our automated shipment tracking service, and therefore the tracking ID that YubiEnterprise Delivery displays is not actually a link. **Workaround**: Copy the India Post tracking number (typically 13 digits starting with E, R, or C) and paste it into either the India Post website - https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx (“Evaluate the expression” means do the arithmetic displayed in the box to prove that you are not a bot) or any of the other tracking service sites that support India Post, such as Ship24.com - (https://www.ship24.com/couriers/india-post-tracking).

1.21.24 Release 1.27.0 (20 October 2022)

Enhancements

- The advanced search feature for shipments has been substantially enhanced (see Advanced Search).

Resolved Issues

- Prior to release 1.27.0, API calls that included saving an excessively long string to the street_line3 field such as the POST /v1/shipments_exact API received a peculiar error. Trying to save a string longer than 60 alpha-numeric characters now throws a better error.

Known Limitations

- **CSV**: The CSV bulk upload does not support combining subscription and non-subscription products in a single shipment. **Workaround**: Use the API or the Console (from the Dashboard or the Shipments tab, Create shipment request > Single shipment) to create single shipment request that includes both types of products.

- For European shipments using Bpost, also known as the Belgium Post Group, the tracking number is not hyperlinked. However, the delivery status does update correctly. **Workaround**: To find out where a Bpost shipment is, copy the tracking number and paste it into the field for that purpose on Bpost’s page for that purpose, http://www.bpost2.be/bpostinternational/track_trace/find.php?lng=en or into Parcelcsapp.com’s page for Bpost tracking, https://parcelsapp.com/en/carriers/belgium-post.

- **API**: When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET /v1/purchaseorders/{purchaseorderId} is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).
• **Channel Partners:** To order keys via API from inventory purchased through channel partners, the new `/shipments_exact` APIs must be used. The older, deprecated `/shipments` API only supports ordering keys from inventory purchased directly from Yubico. For more information, see *Inventory: Channel Partners.*

• **India shipments:** Some of our shipments to India use India Post for the last mile. India Post does not support our automated shipment tracking service, and therefore the tracking ID that YubiEnterprise Delivery displays is not actually a link. **Workaround:** Copy the India Post tracking number (typically 13 digits starting with E, R, or C) and paste it into either the India Post website - [https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx](https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx) (“Evaluate the expression” means do the arithmetic displayed in the box to prove that you are not a bot) or any of the other tracking service sites that support India Post, such as Ship24.com - [https://www.ship24.com/couriers/india-post-tracking](https://www.ship24.com/couriers/india-post-tracking).

**Resolved Issues**

• Previously, if the last remaining user of an org attempted to remove themselves from that org, they were automatically logged out of the console. This has been fixed so that users attempting this operation (which is not allowed and will result in an error message) remain logged in.

**Known Limitations**

• **CSV:** The CSV bulk upload does not support combining subscription and non-subscription products in a single shipment. **Workaround:** Use the API or the Console (from the Dashboard or the Shipments tab, Create shipment request > Single shipment) to create single shipment request that includes both types of products.

• For European shipments using Bpost, also known as the Belgium Post Group, the tracking number is not hyperlinked. However, the delivery status does update correctly. **Workaround:** To find out where a Bpost shipment is, copy the tracking number and paste it into the field for that purpose on Bpost’s page for that purpose, [http://www.bpost2.be/bpostinternational/track_trace/find.php?lng=en](http://www.bpost2.be/bpostinternational/track_trace/find.php?lng=en) or into Parcelsapp.com’s page for Bpost tracking, [https://parcelsapp.com/en/carriers/belgium-post](https://parcelsapp.com/en/carriers/belgium-post).

• **API:** When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET `/v1/purchaseorders/{purchaseorderId}` is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).

• **Channel Partners:** To order keys via API from inventory purchased through channel partners, the new `/shipments_exact` APIs must be used. The older, deprecated `/shipments` API only supports ordering keys from inventory purchased directly from Yubico. For more information, see *Inventory: Channel Partners.*

• **India shipments:** Some of our shipments to India use India Post for the last mile. India Post does not support our automated shipment tracking service, and therefore the tracking ID that YubiEnterprise Delivery displays is not actually a link. **Workaround:** Copy the India Post tracking number (typically 13 digits starting with E, R, or C) and paste it into either the India Post website - [https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx](https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx) (“Evaluate the expression” means do the arithmetic displayed in the box to prove that you are not a bot) or any of the other tracking service sites that support India Post, such as Ship24.com - [https://www.ship24.com/couriers/india-post-tracking](https://www.ship24.com/couriers/india-post-tracking).
1.21.26 Release 1.26.0 (22 September 2022)

New Features & Enhancements

• Whitespace is now trimmed from the following fields in the bulk order request CSV file:
  – channel partner ID
  – inventory type
  – delivery type
  – key quantities

  Trimming will help prevent the CSV file parser from falsely rejecting these fields.

• When a user attempts to change their account password, and the new password violates any of the password requirements, an error message in red containing the first violated rule will appear on screen.

• The items in the top navigation bar (Dashboard, Shipments, Purchase orders, Settings) are now clickable from within a subpage of a particular item/tab. For example, a user can now click on Shipments from within a shipment detail page to navigate back to the main Shipments screen.

Resolved Issues

• The “Inactive” user status has been renamed as “Deactivated.”

• The unused /organization/update-setting API endpoint has been removed.

• Previously, when a console user navigated to the Users tab under Settings and reduced the number of users shown per page to 5, the delete (trash can) icon for the 4th user disappeared. This has been fixed so that the delete icon is available for all users shown on screen.

Known Limitations

• CSV: The CSV bulk upload does not support combining subscription and non-subscription products in a single shipment. **Workaround:** Use the API or the Console (from the Dashboard or the Shipments tab, Create shipment request > Single shipment) to create single shipment request that includes both types of products.

• For European shipments using Bpost, also known as the Belgium Post Group, the tracking number is not hyperlinked. However, the delivery status does update correctly. **Workaround:** To find out where a Bpost shipment is, copy the tracking number and paste it into the field for that purpose on Bpost’s page for that purpose, http://www.bpost2.be/bpostinternational/track_trace/find.php?lng=en or into Parcelsapp.com’s page for Bpost tracking, https://parcelsapp.com/en/carriers/belgium-post.

• API: When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET /v1/purchaseorders/{purchaseorderId} is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).

• Channel Partners: To order keys via API from inventory purchased through channel partners, the new /shipments_exact APIs must be used. The older, deprecated /shipments API only supports ordering keys from inventory purchased directly from Yubico. For more information, see Inventory: Channel Partners.

• India shipments: Some of our shipments to India use India Post for the last mile. India Post does not support our automated shipment tracking service, and therefore the tracking ID that YubiEnterprise Delivery displays is not actually a link. **Workaround:** Copy the India Post tracking number (typically 13 digits starting with E, R, or C) and paste it into either the India Post website - https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx (“Evaluate the expression” means do the arithmetic displayed in the box to prove
that you are not a bot) or any of the other tracking service sites that support India Post, such as Ship24.com - (https://www.ship24.com/couriers/india-post-tracking).

1.21.27 Release 1.25.2 (24 August 2022)

New Features & Enhancements

• API Token: Notification of token expiry is now emailed not only to the token holder but also to the org owner. (For more information on this, see Lifecycle Management.)

Known Limitations

• CSV: The CSV bulk upload does not support combining subscription and non-subscription products in a single shipment. **Workaround:** Use the API or the Console (from the Dashboard or the Shipments tab, Create shipment request > Single shipment) to create single shipment request that includes both types of products.

• For European shipments using Bpost, also known as the Belgium Post Group, the tracking number is not hyperlinked. However, the delivery status does update correctly. **Workaround:** To find out where a Bpost shipment is, copy the tracking number and paste it into the field for that purpose on Bpost’s page for that purpose, http://www.bpost2.be/bpostinternational/track_trace/find.php?lng=en or into Parcelsapp.com’s page for Bpost tracking, https://parcelsapp.com/en/carriers/belgium-post.

• API: When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET /v1/purchaseorders/{purchaseorderId} is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).

• Channel Partners: To order keys via API from inventory purchased through channel partners, the new /shipments_exact APIs must be used. The older, deprecated /shipments API only supports ordering keys from inventory purchased directly from Yubico. For more information, see Inventory: Channel Partners.

• India shipments: Some of our shipments to India use India Post for the last mile. India Post does not support our automated shipment tracking service, and therefore the tracking ID that YubiEnterprise Delivery displays is not actually a link. **Workaround:** Copy the India Post tracking number (typically 13 digits starting with E, R, or C) and paste it into either the India Post website - https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx (“Evaluate the expression” means do the arithmetic displayed in the box to prove that you are not a bot) or any of the other tracking service sites that support India Post, such as Ship24.com - (https://www.ship24.com/couriers/india-post-tracking).

1.21.28 Release 1.25.0 (18 August 2022)

Resolved Issues

• CSV: If the country code column in the CSV upload file had a space inserted in the country code, for example, a trailing space after “US” so that the system read it as “US “, upload of the CSV file would fail without an error. This issue has now been fixed.

• With shipments to the UK, in rare cases a shipment’s status was not progressing beyond Shipped: In Transit, although the carrier’s website was showing a delivery exception notice. Without a status update, no delivery exception email could be sent to the shipment recipient. This issue has now been resolved.
Known Limitations

- **CSV**: The CSV bulk upload does not support combining subscription and non-subscription products in a single shipment. **Workaround**: Use the API or the Console (from the Dashboard or the Shipments tab, Create shipment request > Single shipment) to create single shipment request that includes both types of products.

- For European shipments using Bpost, also known as the Belgium Post Group, the tracking number is not hyperlinked. However, the delivery status does update correctly. **Workaround**: To find out where a Bpost shipment is, copy the tracking number and paste it into the field for that purpose on Bpost’s page for that purpose, http://www.bpost2.be/bpostinternational/track_trace/find.php?lng=en or into Parcelsapp.com’s page for Bpost tracking, https://parcelsapp.com/en/carriers/belgium-post.

- **API**: When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET /v1/purchaseorders/{purchaseorderId} is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).

- **Channel Partners**: To order keys via API from inventory purchased through channel partners, the new /shipments_exact APIs must be used. The older, deprecated /shipments API only supports ordering keys from inventory purchased directly from Yubico. For more information, see Inventory: Channel Partners.

- **India shipments**: Some of our shipments to India use India Post for the last mile. India Post does not support our automated shipment tracking service, and therefore the tracking ID that YubiEnterprise Delivery displays is not actually a link. **Workaround**: Copy the India Post tracking number (typically 13 digits starting with E, R, or C) and paste it into either the India Post website - https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx (“Evaluate the expression” means do the arithmetic displayed in the box to prove that you are not a bot) or any of the other tracking service sites that support India Post, such as Ship24.com - (https://www.ship24.com/couriers/india-post-tracking).

1.21.29 Release 1.24.0 (21 July 2022)

New Features & Enhancements

- Shipments destined for the US or Canada have been standardized to use the USPS codes for state or province. Every shipment request method now uses this input: individual shipment requests made via the Console or the API and bulk requests using the CSV file all require the USPS codes. The mappings between full names and codes are given in USPS Codes for US and Canada. As of the current release, use of these USPS codes is mandatory. Shipment requests that do not adhere to this standard will generate an error message, and no shipment will be created.

Resolved Issues

- **Console**: In the table on the Shipments tab, shipments were not sorting correctly on the ship_date or the delivery_date columns. Shipment requests should have been sorted into chronological order based on the selected column. Now the sequencing of requests in these columns is displayed correctly in chronological order when the sort icon for either of these columns is clicked.

- Some shipments sent to India have a status of “Delivered,” even though the carrier and tracking number are still showing as “coming soon.”

- Some shipments sent through India Post and delivered by the Transnet carrier made no progress through the expected statuses; they remained in the Shipped:In Transit state even after the shipment was delivered. This issue has now been fixed; all India Post shipments sent via Transnet are now tracked and therefore make the expected progress through the statuses.
Known Issues

- **CSV**: If the country code column in the CSV upload file has a space inserted in the country code, for example, a trailing space after “US” so that the system reads it as “US “, upload of the CSV file will fail without an error.

Known Limitations

- **CSV**: The CSV bulk upload does not support combining subscription and non-subscription products in a single shipment. **Workaround**: Use the API or the Console (from the Dashboard or the Shipments tab, Create shipment request > Single shipment) to create single shipment request that includes both types of products.

- For European shipments using Bpost, also known as the Belgium Post Group, the tracking number is not hyperlinked. However, the delivery status does update correctly. **Workaround**: To find out where a Bpost shipment is, copy the tracking number and paste it into the field for that purpose on Bpost’s page for that purpose, http://www.bpost2.be/bpostinternational/track_trace/find.php?lng=en or into Parcelsapp.com’s page for Bpost tracking, https://parcelsapp.com/en/carriers/belgium-post.

- **API**: When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET /v1/purchaseorders/{purchaseorderId} is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).

- **Channel Partners**: To order keys via API from inventory purchased through channel partners, the new /shipments_exact APIs must be used. The older, deprecated /shipments API only supports ordering keys from inventory purchased directly from Yubico. For more information, see Inventory: Channel Partners.

- **India shipments**: Some of our shipments to India use India Post for the last mile. India Post does not support our automated shipment tracking service, and therefore the tracking ID that YubiEnterprise Delivery displays is not actually a link. **Workaround**: Copy the India Post tracking number (typically 13 digits starting with E, R, or C) and paste it into either the India Post website - https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx (“Evaluate the expression” means do the arithmetic displayed in the box to prove that you are not a bot) or any of the other tracking service sites that support India Post, such as Ship24.com - (https://www.ship24.com/couriers/india-post-tracking).

### 1.21.30 Release 1.23.0 (23 June 2022)

**New Features & Enhancements**

- Shipments destined for the US or Canada can use the USPS codes for state or province. Every shipment request method has been standardized for this input: individual shipment requests made via the Console or the API and bulk requests using the CSV file all take the USPS codes. The mappings between full names and codes are given in USPS Codes for US and Canada. As of YubiEnterprise Delivery release 1.24.0 scheduled for 21 July 2022, use of these USPS codes will be mandatory. After this date, shipment requests that do not adhere to this standard will generate an error message, and no shipment will be created.

- **Console** Each Purchase Order now has its own detail page, showing PO number, whether direct or channel sale, and if the latter, the seller’s name, the expiring date for initial or perpetual stock, address and contact information. The available inventory is shown as before.
Known Limitations

- For European shipments using Bpost, also known as the Belgium Post Group, the tracking number is not hyperlinklinked. However, the delivery status does update correctly. **Workaround:** To find out where a Bpost shipment is, copy the tracking number and paste it into the field for that purpose on Bpost’s page for that purpose, [http://www.bpost2.be/bpostinternational/track_trace/find.php?lng=en](http://www.bpost2.be/bpostinternational/track_trace/find.php?lng=en) or into Parcelsapp.com’s page for Bpost tracking, [https://parcelsapp.com/en/carriers/belgium-post](https://parcelsapp.com/en/carriers/belgium-post).

- **API:** When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET /v1/purchaseorders/{purchaseorderId} is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).

- **Channel Partners:** To order keys via API from inventory purchased through channel partners, the new /shipments_exact APIs must be used. The older, deprecated /shipments API only supports ordering keys from inventory purchased directly from Yubico. For more information, see [Inventory: Channel Partners](https://www.ship24.com/couriers/india-post-tracking).

- **India shipments:** Some of our shipments to India use India Post for the last mile. India Post does not support our automated shipment tracking service, and therefore the tracking ID that YubiEnterprise Delivery displays is not actually a link. **Workaround:** Copy the India Post tracking number (typically 13 digits starting with E, R, or C) and paste it into either the India Post website - [https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx](https://www.indiapost.gov.in/_layouts/15/dop.portal.tracking/trackconsignment.aspx) ("Evaluate the expression" means do the arithmetic displayed in the box to prove that you are not a bot) or any of the other tracking service sites that support India Post, such as Ship24.com - [https://www.ship24.com/couriers/india-post-tracking](https://www.ship24.com/couriers/india-post-tracking).

### 1.21.31 Release 1.22.1 (25 May 2022)

**Resolved Issues**

- For shipments sent to India, status emails declaring that the shipment had been sent were being generated every hour. This issue has now been fixed.

**Known Limitations**

- For European shipments using Bpost, also known as the Belgium Post Group, the tracking number is not hyperlinklinked. However, the delivery status does update correctly. **Workaround:** To find out where a Bpost shipment is, copy the tracking number and paste it into the field for that purpose on Bpost’s page for that purpose, [http://www.bpost2.be/bpostinternational/track_trace/find.php?lng=en](http://www.bpost2.be/bpostinternational/track_trace/find.php?lng=en) or into Parcelsapp.com’s page for Bpost tracking, [https://parcelsapp.com/en/carriers/belgium-post](https://parcelsapp.com/en/carriers/belgium-post).

- **API:** When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET /v1/purchaseorders/{purchaseorderId} is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).

- **Channel Partners:** To order keys via API from inventory purchased through channel partners, the new /shipments_exact APIs must be used. The older, deprecated /shipments API only supports ordering keys from inventory purchased directly from Yubico. For more information, see [channel-partners-label](https://www.ship24.com/couriers/india-post-tracking).
1.21.32  Release 1.22.0 (20 May 2022)

New Features & Enhancements

• With the release of version 1.22.0, the tracking of shipments to India becomes more transparent. On the Console, clickable tracking numbers are now provided for shipments delivered by Blue Dart, one of our main carriers on the Indian subcontinent. The API too returns a `tracking_link` value.

Resolved Issues

• Shipments sent to GB/UK now transition relatively quickly to “Delivered” or “Delivery Exception” instead of remaining in the “Shipped: In Transit” status indefinitely.

• **Console:** The Purchase Order sorting function did not work. Clicking on a column heading did not result in the content of the column being sorted. This issue has now been fixed, and any column can now be sorted as expected.

Known Limitations

• For European shipments using Bpost, also known as the Belgium Post Group, the tracking number is not hyperlinked. However, the delivery status does update correctly. **Workaround:** To find out where a Bpost shipment is, copy the tracking number and paste it into the field for that purpose on Bpost’s page for that purpose, [http://www.bpost2.be/bpostinternational/track_trace/find.php?lng=en](http://www.bpost2.be/bpostinternational/track_trace/find.php?lng=en) or into Parcelsapp.com’s page for Bpost tracking, [https://parcelsapp.com/en/carriers/belgium-post](https://parcelsapp.com/en/carriers/belgium-post).

• **API:** When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET /v1/purchaseorders/{purchaseorderId} is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).

• **Channel Partners:** To order keys via API from inventory purchased through channel partners, the new /shipments_exact APIs must be used. The older, deprecated /shipments API only supports ordering keys from inventory purchased directly from Yubico. For more information, see :ref:channel-partners-label.

1.21.33  Release 1.21.0 (26 April 2022)

Resolved Issues

• If a field has been selected for sorting on any of the console list screens, that field title will now be shown in bold.

• Email addresses are now validated during shipment request creation for single and bulk shipments.

• The channel partner name field in the shipments .csv file is now populated for all entries, including direct sale shipments.

• Previously, when an order received a **Delivery Exception** status, an internal message was shown in the console. This has been fixed so the message is no longer shown.

• The API documentation has been updated to reflect that the suggested address fields (suggest_street_line1, suggest_street_line2, suggest_street_line3, suggest_city, suggest_region, and suggest_postal_code) are largely deprecated and will return an empty string. This applies to the following APIs: GET /shipments_exact, POST /shipments_exact, GET /shipments_exact{shipmentId}, and POST /shipments_exact{shipmentId}.

• The suggest_recipient field of the API, which is never returned in responses, has been removed from the API.
On the Users screen under Settings, the alphabetic sort was not working properly when trying to sort users by email address. The sort function has been fixed and now behaves as expected.

Role and State are no longer sortable fields on the Users screen under Settings in the console.

**Known Limitations**

- For European shipments using Bpost, also known as the Belgian Post Group, the tracking number is not hyperlinked. However, the delivery status does update correctly. **Workaround:** To find out where a Bpost shipment is, copy the tracking number and input it on Bpost’s page for that purpose, http://www.bpost2.be/bpostinternational/track_trace/find.php?lng=en or that of their partner, https://parcelsapp.com/en/carriers/belgium-post.

- **API:** When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET /v1/purchaseorders/{purchaseorderId} is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).

- **Channel Partners:** To order keys via API from inventory purchased through channel partners, the new /shipments_exact APIs must be used. The older, deprecated /shipments API only supports ordering keys from inventory purchased directly from Yubico. For more information, see Inventory: Channel Partners.

**1.21.34 Release 1.20.0 (24 March 2022)**

**New Features & Enhancements**

- **Console/CSV/API:** Consistency in the requirement for recipient telephone number in shipment requests is now system-wide. When creating a single shipment request in the Console (i.e., using the GUI), phone number has always been a required field. Now bulk shipment requests via CSV upload also require phone number, as do shipment requests made via API. With the current release of YubiEnterprise Delivery - 1.20.0 - shipment requests that do not include recipient telephone number (“Contact phone”) will no longer be processed. Although the /shipments API is deprecated, this requirement will be enforced on that API too.

- **Console/CSV/API** Shipment request statuses will now be updated to reflect changes reported after requests have reached the “Delivery Exception” state.

**Known Limitations**

- For European shipments using Bpost, also known as the Belgian Post Group, the tracking number is not hyperlinked. However, the delivery status does update correctly. **Workaround:** To find out where a Bpost shipment is, copy the tracking number and input it on Bpost’s page for that purpose, http://www.bpost2.be/bpostinternational/track_trace/find.php?lng=en or that of their partner, https://parcelsapp.com/en/carriers/belgium-post.

- **API:** When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET /v1/purchaseorders/{purchaseorderId} is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).

- **Channel Partners:** To order keys via API from inventory purchased through channel partners, the new /shipments_exact APIs must be used. The older, deprecated /shipments API only supports ordering keys from inventory purchased directly from Yubico. For more information, see Inventory: Channel Partners.
1.21.35 Release 1.19.0 (24 February 2022)

New Features & Enhancements

• **Console**: The detail view of the shipment request now displays **Total cost** and **Product cost** in the **Shipping and tax** section of the page instead of at the top, where it was previously shown.

Resolved Issues

• The **POST validate-address** API that is used to determine whether an address is acceptable by YED for delivery contradicted the **POST shipments_exact** API in that the first deemed an address without a city acceptable, while the second deemed it unacceptable, since city is a required field. The validate-address API has now been fixed; it too requires the city field and its rules are consistent with the rules of the **POST shipments_exact** API.

Known Limitations

• For European shipments using Bpost, also known as the Belgian Post Group, the tracking number is not hyper-linked. However, the delivery status does update correctly. **Workaround**: To find out where a Bpost shipment is, copy the tracking number and input it on Bpost’s page for that purpose, [http://www.bpost2.be/bpostinternational/track_trace/find.php?lng=en](http://www.bpost2.be/bpostinternational/track_trace/find.php?lng=en) or that of their partner, [https://parcelsapp.com/en/carriers/belgium-post](https://parcelsapp.com/en/carriers/belgium-post).

• **API**: When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET /v1/purchaseorders/{purchaseorderId} is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).

• **Channel Partners**: To order keys via API from inventory purchased through channel partners, the new /shipments_exact APIs must be used. The older, deprecated /shipments API only supports ordering keys from inventory purchased directly from Yubico. For more information, see [Inventory: Channel Partners](#).

1.21.36 Release 1.18.0 (20 January 2022)

New Features & Enhancements

• **API**: Holders of API tokens are notified before expiry of a token via an automatically generated email sent to the address associated with the token. The email is sent 7 days before expiry, the day before expiry, and on the day of expiry.

Resolved Issues

• When the CSV file containing shipment requests was generated, the **inventory_type** column was not always populated for every row in the file. This issue has now been fixed.

• In the email that the system sends to notify recipients that a shipment will arrive, the **carrier** field was not consistently populated, nor was the link added to the carrier’s tracking number. This issue has now been fixed, and both the carrier and the tracking link are included in the email. **API**: This also resolves the issue of the incomplete response that was returned for the shipment order in the GET /shipments_exact and GET /shipments_exact/<shipmentId> responses; they now return comprehensive information.

• In the user guide, the section entitled **Using the API to Execute a Shipping Request** had a typo in the second sentence, which prevented the following information from being displayed at that location. “Although the system can deliver to Post Office (PO) Boxes within the United States, delivery to PO Boxes (or the equivalent) elsewhere in the world is unlikely to succeed.” This has now been fixed, so that the information now appears in this location.
YubiEnterprise Services

Known Limitations

• For European shipments using Bpost, also known as the Belgian Post Group, the tracking number is not hyper-linked. However, the delivery status does update correctly. **Workaround:** To find out where a Bpost shipment is, copy the tracking number and input it on Bpost’s page for that purpose, http://www.bpost2.be/bpostinternational/track_trace/find.php?lng=en or that of their partner, https://parcelsapp.com/en/carriers/belgium-post.

• API When getting a purchase order by its ID, extra, undocumented fields are returned. When a GET /v1/purchaseorders/{purchaseorderId} is sent, the response includes is_vat_valid, is_tax_exempt, is_post_pay.

1.21.37 Release 1.17.2 (10 December 2021)

Enhancements

• Fifteen more countries have been added to the list of deliverable shipment destinations. The lists of countries and the corresponding limitations are given in Key Quantities.

Resolved Issues

• **Console:** Shipments to overseas PO boxes (non-USA) are not delivered; instead, they are returned by all carriers. The Console now displays a warning to this effect when a shipment request is created using an overseas PO box. This limitation is referenced in Post Office Box as Destination.

1.21.38 Release 1.17.0 (18 November 2021)

New Features & Enhancements

• **Console:** Owners, Admins, and Auditors can now view the list of refunds for lost or missing shipments, drill down into the details of each item, and download a CSV file containing this data. For more information, see Refunds.

Resolved Issues

• **Console:** Including leading or following whitespace with a term entered in the Search field yielded no results, even if the search term ought to have produced results. This issue has now been resolved; the system automatically trims any whitespace of this kind before the search is performed.

• When a shipment request was made providing a company name as recipient, plus either recipient first name or recipient last name, a validation error was returned. This issue has now been resolved: no error is thrown when the company name plus either first name or last name is provided.

• **Console:** The edit icon on the shipments page redirected the user to the shipment details page instead of showing the edit view in the same page. This issue has now been resolved, and it is now possible to edit in the same view.

• The status summary for shipments that were cancelled indicated that the shipments had been delivered, even though they were not. This issue has now been fixed: the status summary correctly shows canceled shipments as such.

• **API integrations:** The API documentation for the GET /shipments_exact API (to get all shipments) erroneously said that all the items included in the shipment (shipment_items) would be returned; that was incorrect - the field (shipment_items) was not returned in the response. This is no longer the case, and the API documentation now accurately reflects that the shipment_items field is not returned in the response.
• **Console**: After login, the Dashboard did not show any data. Only when the page was refreshed or one was redirected back from another page did the page load and show relevant data. This issue has now been resolved: the Dashboard page loads upon login and displays all data.

**Known Issues**

• **API** When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET /v1/purchaseorders/{purchaseorderId} is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).

• When the CSV file containing shipment requests is generated, the `inventory_type` column is not always populated for every row in the file.

**Known Limitations**

• For European shipments using Bpost, also known as the Belgian Post Group, the tracking number is not hyperlinked. However, the delivery status does, update correctly. **Workaround**: To find out where a Bpost shipment is, copy the tracking number and input it on Bpost’s page for that purpose, [http://www.bpost2.be/bpostinternational/track_trace/find.php?lng=en](http://www.bpost2.be/bpostinternational/track_trace/find.php?lng=en) or that of their partner, [https://parcelsapp.com/en/carriers/belgium-post](https://parcelsapp.com/en/carriers/belgium-post).

**1.21.39 Release 1.16.0 (21 October 2021)**

**New Features & Enhancements**

• Eight new countries are available for existing and new organizations to ship to. They are: India, Saudi Arabia, the United Arab Emirates, Mexico, Chile, Israel, Taiwan, and Hong Kong.

• Fulfillment partner [“Provider”] information is now displayed:
  – On the Console, on the shipment details page, in the **Shipping & tax** section
  – In the API, in the `carrier` field.

• **API** PUT /shipments/makedraft has been deprecated and is therefore no longer available.

**Known Issues**

• **API**: When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET /v1/purchaseorders/{purchaseorderId} is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).

**Known Limitations**

• For European shipments using Bpost, also known as the Belgian Post Group, the tracking number is not hyperlinked. However, the delivery status does, update correctly. **Workaround**: To find out where a Bpost shipment is, copy the tracking number and input it on Bpost’s page for that purpose, [http://www.bpost2.be/bpostinternational/track_trace/find.php?lng=en](http://www.bpost2.be/bpostinternational/track_trace/find.php?lng=en) or that of their partner, [https://parcelsapp.com/en/carriers/belgium-post](https://parcelsapp.com/en/carriers/belgium-post).
1.21.40 Release 1.15.0 (23 September 2021)

New Features & Enhancements

• Seven new countries: It is now possible to have shipments sent to Australia, New Zealand, Japan, Singapore, the Philippines, Indonesia, and Thailand.

Resolved Issues

• In cases when particular carriers were used to ship an order, shipments were not progressing beyond the SentForFulfillment state. The system now handles additional carriers correctly.

• Very occasionally, shipments did not have their delivered_date set. This issue has now been resolved, and all shipments that reach their target recipient have a delivered_date.

• On the Purchase Order popup, the channel partner name and partner ID were not shown the same way as they were in the shipment popup. The presentation of this information has now been rationalized so that it appears with the same formatting and in the same detail in both locations.

• Disabled Update Button When a shipment request was in the Awaiting validation state, it was not possible for the creator of the request to edit any field other than the from stock/key counts field. Even though the user was able to click the Shipment id link to open the shipment details page, the Update button remained disabled by default. This issue has now been resolved: it is possible to update all fields on the shipment details page even when the request is in the Awaiting validation state.

• Insufficient inventory
  – To maintain the window during which orders can be updated, edited, or recalled/deleted, orders are held and processed in batch. Therefore there might be less inventory available by the time an order is processed than what was shown in purchase order details when the request was created. For example, the person starting to create a shipment request assumes that the 50 keys the console shows they have in inventory will still be available by the time the shipment request is submitted. When this is not the case, any shipment requests processed after the inventory is exhausted will be flagged Error: Processing Error, contact support. Reason is Not enough Inventory for Shipment - ShipmentsStateError.
  – A second issue arises from the same source: when the user clicks on the shipment request ID with that error, part of the status message displayed is “Insufficient Inventory of Product X” where “X” is an integer. To find out what X means, consult the Product Name, Stock/Inventory, product_id and inventory_product_id table.
  – A third issue arises from the same source: it is not possible to make single shipment requests for products that are not available in inventory - which is expected if insufficient product has been purchased, but an insufficiency of inventory can also be caused by Yubico itself running out of stock.

Workaround: Either contact Support to get more inventory, or edit the request to switch to another product for which inventory is available.
Known Limitations

- For European shipments using Bpost, also known as the Belgian Post Group, the tracking number is not hyper-linked. However, the delivery status does, update correctly. **Workaround:** To find out where a Bpost shipment is, copy the tracking number and input it on Bpost’s page for that purpose, [http://www.bpost2.be/bpostinternational/track_trace/find.php?lng=en](http://www.bpost2.be/bpostinternational/track_trace/find.php?lng=en) or that of their partner, [https://parcelsapp.com/en/carriers/belgium-post](https://parcelsapp.com/en/carriers/belgium-post).

1.21.41 Release 1.14.0 (19 August 2021)

New Features & Enhancements

- **Shipment requests:** The alphanumeric character limits on the Console fields and the cells in the CSV upload file and the API have been expanded. For exact details, see the table detailing these limits in *Shipment Request Field Limitations*.
  
  - The shipment request detail popup has been expanded to a full page in order to display more information.

Resolved Issues

- **API:** For POST `validate-address`, `street_line1` limit is 60 alpha-numeric characters.
  
  - The unit price of the products is shown on the Purchase Order popup if the products were purchased directly from Yubico (as opposed to from a channel partner).
  
  - **Single shipment request:** The product list is now filtered by the partner selected. In other words, selecting a channel partner determines which products are available for shipment and the quantities thereof.
  
  - **Bulk shipment request:** The CSV file’s `ChannelPartnerId` column requires that the ID be explicitly entered instead of defaulting to “1” for Yubico (direct sale). This facilitates the avoidance of errors.

Known Issues

- **API** When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for `GET /v1/purchaseorders/{purchaseorderId}` is sent, the response includes `(is_vat_valid, is_tax_exempt, is_post_pay)`.

Known Limitations

- For European shipments using Bpost, also known as the Belgian Post Group, the tracking number is not hyper-linked. However, the delivery status does, update correctly. **Workaround:** To find out where a Bpost shipment is, copy the tracking number and input it on Bpost’s page for that purpose, [http://www.bpost2.be/bpostinternational/track_trace/find.php?lng=en](http://www.bpost2.be/bpostinternational/track_trace/find.php?lng=en) or that of their partner, [https://parcelsapp.com/en/carriers/belgium-post](https://parcelsapp.com/en/carriers/belgium-post).
1.21.42 Release 1.13.0 (22 July 2021)

New Features & Enhancements

- **Channel Partners**: This feature enables the inclusion of Yubico’s channel partners in YubiEnterprise Delivery. Customers can distinguish between inventory purchased directly from Yubico and inventory purchased through our channel partners. This information is displayed on the Purchase Order (PO) tab by clicking on the individual PO IDs (see PO Detail View). When requesting individual shipments using the Console, the channel partner is specified via the Channel Partner dropdown (see Shipping to a Single Address (Console)), while for bulk upload of shipment requests, the ChannelPartnerId column in the CSV file is must be populated see: Shipment Request Field Limitations. This feature is fully described in Purchasing Through Resellers/Distributors in “Requesting Shipment” in this guide. The updated APIs are listed under a heading with the same name, Purchasing Through Resellers/Distributors, in the “API Onboarding Playbook” in this guide.

- The default Delivery Exception email no longer references and links to Yubico’s support website. This enables enterprise customers to divert any support requests from shipment recipients (end users) to their own IT team.

- **Download CSV**: A new field, recipient_company, is now included in the exportable .csv file containing all shipment requests. This is the equivalent of the Company field in a single shipment request.

Resolved Issues

- **API**: To order keys via API from inventory purchased through channel partners, the new /shipments_exact APIs must be used. The older, deprecated /shipments API only supports ordering keys from inventory purchased directly from Yubico. For more information, see Purchasing Through Resellers/Distributors.

- There was an issue where the user ID associated with a shipment request was being updated to the ID of the last user to edit the shipment. The requester ID is supposed to be the ID of the user who originated the request and should not change once the order is created. A side effect of this was that it was possible for the shipment to get into a state in which it was not viewable/editable/delete-able. The fix was to ensure that the requester ID always remains unchanged.

- **API**: Now suggest_postal_code returns the correct information. Previously, this was never correctly returned, which affected the following APIs:
  - GET /shipments_exact
  - GET /shipments_exact/{shipmentId}
  - PUT /shipments_exact/{shipmentId} because the response to that is the full shipment payload, which includes the suggest_postal_code field.

  It had no effect on the POST /validate-address API.

Known Issues

- When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET /v1/purchaseorders/{purchaseorderId} is sent, the response includes (is_vat_valid, is_tax_exempt, is_post_pay).
Known Limitations

• **Channel Partners**: To order keys via API from inventory purchased through channel partners, the new /shipments_exact APIs **must** be used. The older, deprecated /shipments API only supports ordering keys from inventory purchased directly from Yubico. For more information, see *Purchasing Through Resellers/Distributors*.

1.21.43 Release 1.12.0 (24 June 2021)

Resolved Issues

• **Search function**: when a search had 0 results, you could type any page number without an error being displayed. This issue has been resolved.

Known Issues

• When getting a purchase order by its ID, extra, undocumented fields are returned. When a request for GET /v1/purchaseorders/{purchaseorderId} is sent, the response includes (`is_vat_valid`, `is_tax_exempt`, and `is_post_pay`).

Known Limitations

• For European shipments using Bpost, also known as the Belgian Post Group, the tracking number is not hyper-linked. However, the delivery status does, update correctly. **Workaround**: To find out where a Bpost shipment is, copy the tracking number and input it on Bpost’s page for that purpose, http://www.bpost2.be/bpostinternational/track_trace/find.php?lng=en or that of their partner, https://parcelsapp.com/en/carriers/belgium-post.

1.21.44 Release 1.11.2 (26 May 2021)

Resolved Issues

• The status of shipment requests that had already been sent out for fulfillment was not updating as expected. The status of those orders remained stuck at “Processing: Queued for Fulfillment” instead of progressing to “Processing: Sent for Fulfillment”. This issue has now been resolved.

Known Issues

• Search function: when a search has 0 results, you can type any page number without an error being displayed.

• The .csv template for bulk shipment requests sometimes contains a column for a product that you do not have, e.g., the YubiKey 5 NFC might not be available to you and yet the template has a column for it. If you attempt to use this column, your bulk shipment request will be rejected for containing an invalid product ID.
Known Limitations

- For European shipments using Bpost, also known as the Belgian Post Group, the tracking number is not hyper-linked. However, the delivery status does update correctly. **Workaround:** To find out where a Bpost shipment is, copy the tracking number and input it on Bpost’s page for that purpose, http://www.bpost2.be/bpostinternational/track_trace/find.php?lng=en or that of their partner, https://parcelsapp.com/en/carriers/belgium-post.

1.21.45 Release 1.11.0 (20 May 2021)

New Features & Enhancements

- API Token: timestamps for creation, last use, and expiry are now shown on the profile page for that user. This information is shown for all tokens used since YubiEnterprise Delivery release 1.10.

- Automated emails sent by the system to end-users upon shipment / delivery / delivery-exception are now fully customizable. Formerly an organization owner or admin could use the Console to customize a paragraph that was then inserted into the standard email template. Now the UI shows one field for the subject of the email and a second for the email body. The customization performed here will apply to all emails sent by the system for that organization.

- The ability to search shipments by recipient_email has now been enabled.

- The Shipped_date now appears on the Dashboard of the Console and on the Shipments tab, as well as in the .csv download file containing the shipment requests.

- The Delivered_date now appears on the Dashboard of the Console and on the Shipments tab, as well as in the .csv download file containing shipment requests. This field is searchable.

Resolved Issues

- CRLF characters (Carriage Return (ASCII 13, r) Line Feed (ASCII 10, n)) were allowed in the address fields of individual shipment requests made via the Console. This resulted in unexpected line breaks in the corresponding row of the download CSV file. Those characters are now stripped from the input, so the CSV file no longer shows those line breaks.

- Data contained in downloaded .csv files of shipment requests was problematic, in that it caused a lack of alignment. This issue has now been corrected.

- When the same item was ordered from different types of inventory, e.g., primary/backup subscription, advanced tier, initial/replacement/buffer, the total quantity of the item from all types of inventory did not always add up correctly. This issue has now been fixed.

- If you entered a product type or quantity that was not available or inactive in the system, the shipping request was rendered incomplete, and the status message used the numeric ID of the product instead of its name (e.g., “ProductId3 not active in the system”). This issue has now been resolved, so that the actual name of the product is shown, e.g., “YubiKey 5C not active in the system”.

- If you canceled a bulk shipment request after having uploaded a .csv file, the previously selected file name was displayed next to the Choose file button. This issue has now been resolved.

- If you hovered over your profile icon on the Console, instead of your organization name in the tooltip, you would see its ID in the YubiEnterprise Delivery system. This issue has now been resolved, and so the actual name of your organization is displayed in the tooltip.
Known Issues

• Search function: when a search has 0 results, you can type any page number without an error being displayed.

• The .csv template for bulk shipment requests sometimes contains a column for a product that you do not have, e.g., the YubiKey 5 NFC might not be available to you and yet the template has a column for it. If you attempt to use this column, your bulk shipment request will be rejected for containing an invalid product ID.

Known Limitations

• For European shipments using Bpost, also known as the Belgian Post Group, the tracking number is not hyper-linked. The delivery status does, however, update correctly. Workaround: To find out where a Bpost shipment is, copy the tracking number and input it on Bpost’s page for that purpose, http://www.bpost2.be/bpostinternational/track_trace/find.php?lng=en or that of their partner, https://parcelsapp.com/en/carriers/belgium-post.

1.21.46 Release 1.10.0 (22 April 2021)

New Features & Enhancements

• The .csv file for bulk import has always been limited to 10MB, but now the system returns a clear error message along with the 400 response code when a user attempts to upload a file that is too large.

• User Account Management: The list of users on the Settings > Users tab now displays a user status column. This enables adherence to compliance procedures when reviewing which users have access to the system.

• Enhanced Security: Session login limits: YubiEnterprise Delivery users do not stay logged in indefinitely. They are automatically logged out after 24 hours.

Resolved Issues

• Console search widget: the page counter is now reset to 1 for each new search.

• Console search widget: It was not possible to enter a page number that would have contained no search results; in other words, if there were only 10 pages of search results, you could not enter 100. It is now possible to enter a page number that does not exist because there were not that many results, but an error message explaining this is now shown.

• The available inventory displayed on the Purchase Order popup is now sorted.

• Making an /auth/machine-token API request with an expired token used to fail with a 500 error. Now such a request correctly returns a 401.

• When a user created a new API token and then switched orgs, the view did not update - the new token still appeared under the other org, even though the active token reference did update correctly. This has now been fixed.

• The email address of the user who created a shipment request is now shown in the pop-up window displayed by clicking on the ID of the shipment request.

• Broken links in the documentation have now been fixed.

• Users in demo mode are no longer able to edit the email template informing new recipients that they will be receiving shipments from YubiEnterprise Delivery. This capability is reserved for org owners and admins whose accounts are fully enabled (i.e., no longer in demo mode).
1.21.47 Release 1.9.0 (18 March 2021)

The initial API documentation link on Swaggerhub (https://app.swaggerhub.com/apis/yubico/yubi-enterprise-delivery-public/v1-oas3) is no longer updated and has therefore been removed. Please refer to: https://console.yubico.com/apidocs/ for the latest API documentation.

Enhancements

- User input is validated in such a way that the user is able to confirm or change input as required before submitting shipment requests; for example:
  - Indications of the allowed input for any given field are provided
  - Character rules are now provided for each API
  - The verification results for uploaded CSV files are now provided
  - Error codes have been standardized.
- YubiEnterprise Delivery users can now give their security keys (nick) names so that a user with multiple keys can distinguish them from each other. The console displays the keys in the order in which they were registered.
- API: Validation error responses are now consistent across the APIs.
- API Security:
  - If your request body does not contain valid JSON, the system informs you that the JSON contents you presented could not be verified and were therefore discarded.
  - When a user with permissions to change user roles attempts to grant a disallowed privilege level, the requested role is checked against a list of available roles and the error displayed to the user says only “a match was not found for a valid role”.
- When selecting products during the creation of a shipment request, users can now see the entire range of custom product options available to their organization.
- Organization owners can now reset just users’ passwords in addition to the existing option of resetting users entirely.

Resolved Issues

- Telephone numbers entered in shipment requests are now validated. If a mistake is found, the user is given the opportunity to correct it before the request is processed.
- API: Submitting invalid values for the delivery_type or inventory_type fields now triggers INFO-level errors instead of 500s.
- API: A JSON unmarshall error resulting from a malformed payload for the /shipments POST CreateShipment API used to send ‘500 / “unknown error”’. This type of error now sends ‘400 / “invalid payload”’.
- When your login has expired, clicking on the Generate API token on the profile page does not work. This issue has now been fixed.
- API: The auditor role can delete API tokens as well as create them.
- Transaction rollbacks are now logged at INFO level instead of at WARNING level, which was too severe.
- When an attempt is made to delete a shipment request that does not exist, the error code returned is now 404 instead of 500, which erroneously indicated a server problem. This issue has now been fixed.
• API: When Organization Products are returned, the TotalCount is now set.
• API: When calling InviteUserToCurrentOrganization for a user already in an organization, an AlreadyExists response is now returned.
• API: GET /shipments was missing the advanced_search parameter. This is now present.
• The CSV download was timing out. This issue has now been resolved.

Known Limitations

• For European shipments using Bpost, also known as the Belgian Post Group, the tracking number is not hyper-linked. The delivery status does, however, update correctly. **Workaround**: To find out where a Bpost shipment is, copy the tracking number and input it on Bpost’s page for that purpose, http://www.bpost2.be/bpostinternational/track_trace/find.php?lng=en or that of their partner, https://parcelsapp.com/en/carriers/belgium-post.

1.21.48 Release 1.8.3 (9 March 2021)

Enhancements

• Support for Transport Layer Security (TLS) v1.0 and v1.1 has been removed; the earliest version YubiEnterprise Delivery now supports is TLS 1.2. This update to the cryptographic protocols renders network communication less vulnerable to attack.

1.21.49 Release 1.8.0 (18 February 2021)

Features & Enhancements

• **Security Enhancement**: YubiEnterprise Delivery 1.8.0 implements an infrastructure enhancement that requires all users to reset their passwords. All users will have received an email from Yubico announcing this one week prior to the 1.8.0 release. The email explains the procedure to be followed: click on the link in the email, which takes you to a page enabling you to update your password. If you do not update it within one week, contact your YubiEnterprise Delivery organization owner for an account reset. If you are an Org Owner, contact YubiEnterprise Support.

• Using the API and the Console (GUI) for single shipments, it is now possible to include products from different inventory types within the same shipment. For details, see *Shipping to a Single Address (Console)*.

• **Advanced Search for API** Advanced search capabilities have been introduced for API users. Fields with different names will be searched in an AND, while fields with the same name will be ORed.

Resolved Issues

• When browsers truncated redirection URLs, or users manually copy-pasted incomplete URLs, the missing OAuth authorize parameters caused the login backend to crash.
Known Issues

- When your login has expired, clicking on the Generate API token on the profile page does not work. **Workaround:** Log in to the Console again.

**1.21.50 Release 1.7.0 (21 January 2021)**

Features & Enhancements

- **API:** Advanced search Lists of shipment requests can be filtered by query parameters. We introduced /search-description on searchable resources to provide a description of the searchable fields.

- Timestamps for shipment requests and for orders being shipped are now provided with millisecond precision from the Console (the GUI) and via the API.

- **API** We now return “404 Not Found” response {"message": "Product Id <> could not be found"} for GET /products/{product id} on an invalid product ID, as per the API contract.

- The CSV file download containing shipment requests shows streamlined shipment status, including for shipments carried out before the 1.7.0 release. For details, see Column Headings in the Shipment Requests Table (Download CSV).

- The tracking number for each shipment is now associated directly with the shipping date, just as the “Shipped - in transit” status is directly linked to the date of shipment.

Resolved Issues

- Organization names were not being displayed correctly. This issue has now been fixed.

- Some European shipments did not show the correct tracking number link. This issue has now been fixed.

- When selecting shipments for bulk deletion, the number of shipment requests listed as available for deletion may not have matched the number displayed directly underneath the Back to Shipments button (e.g., “1 - 11 of 32” and yet there would be only a single item shown in the list). The number of items listed in the table was correct, not the number shown on the upper right. This issue has now been fixed.

- When the API was used to create a shipment request against a subscription that did not include the product you wanted to ship, the shipment details page (the popup for the shipment ID) on the Console (the GUI) for that request would show that the “ghost product” request was made against Standard products inventory. This issue is now fixed.

- In the YubiEnterprise Console (the GUI), the limit on the number of characters in the “Company” field has been raised from 15 to 20, so it now matches the limits on that field in the bulk upload as a CSV file and the API.

- Shipment requests with shipment_state_id=104 (ShipmentStateDelivered) will always have is_delivered=TRUE.

- Upon completing a single shipment request using the YubiEnterprise Console (the GUI), the button for creating another shipping request did not appear to be functional. Its name is now properly displayed, and this secondary button changes from white to dark blue when you mouse over it.

- When using the Console (GUI) to create a single shipment request and selecting first Standard products from the From stock dropdown, entering a quantity for any product, then selecting another item from From stock, the quantity previously selected in conjunction with Standard products disappears from view. However, the number entered is still in the system; it shows up in the confirmation message when you click Create Shipment.

- **API** In the validate-address API, some fields in the response payload and the US Address Component did not match the LOB API. This issue is now fixed.
1.21.51 Release 1.6.0 (19 November 2020)

Features & Enhancements

• With the release of YubiEnterprise Delivery 1.6.0, customers have more granular control in determining the stock inventory from which products are shipped. Previously, the system would choose the stock from the oldest Purchase Order in the system to ensure that the customer’s stock did not expire before use.
  – Explicit selection is now available for single shipment requests (see Shipping to a Single Address (Console)).
  – Bulk shipment orders will continue to use the original method whereby the system chooses the stock. Bulk shipment ordering will convert to the exact choice method in a future release.
  – A new set of delivery APIs has been made available to support the exact choice method, the suite of /shipments_exact APIs. The original /shipments APIs are deprecated starting in this 1.6.0 release but they will continue to be available until at least May 2021. Customers are encouraged to use the /shipments_exact APIs for any new development and to update existing clients soon.

<table>
<thead>
<tr>
<th>Deprecated</th>
<th>Replacement</th>
</tr>
</thead>
<tbody>
<tr>
<td>GET /shipments</td>
<td>GET /shipments_exact</td>
</tr>
<tr>
<td>POST /shipments</td>
<td>POST /shipments_exact</td>
</tr>
<tr>

<td>GET /shipments_exact/{shipmentId}</td>
</tr>
<tr>
<td>PUT /shipments/{shipmentId}</td>
<td>PUT /shipments_exact/{shipmentId}</td>
</tr>
<tr>
<td>DELETE /shipments/{shipmentId}</td>
<td>DELETE /shipments_exact/{shipmentId}</td>
</tr>
<tr>
<td>/UpdateShipmentById</td>
<td>shipments_exact/{shipment_id}</td>
</tr>
<tr>
<td>/organization/update-setting</td>
<td>none</td>
</tr>
</tbody>
</table>

• Before adding Backup subscriptions to new Purchase Orders (POs), existing POs should be exhausted.

• Download of CSV file with shipment requests has been accelerated.

• Expedited shipments in the US will no longer use USPS Priority (for 1-99 items) and UPS Ground (for 100-500 items) but instead will be using UPS Overnight for 1-500 products. The cost of shipping has been adjusted accordingly.

• A new version of the original /address-validation API checks addresses more closely to ensure acceptance by the system. The deprecated API is /address-validation and the new one is /validate-address. The deprecated API will continue to be available until at least May 2021. Users are encouraged to use the /validate-address API for any new development and to update existing clients soon.

• The online Help can now be accessed from the login screen; it is not necessary to log in to access Help.

• Better navigation: When reviewing Incompletes, a new Go Back to Shipments button facilitates acceleration of the workflow.

• The Dashboard view more accurately reflects modes of purchase and stock in inventory. The new sections are Standard products inventory, Non-subscription inventory, and Subscription inventory.
Resolved Issues

- It is now possible to create a single shipment request combining different types of stock/inventory, for example both a lanyard from the Standard products option and a key from the Primary Subscr. Advanced Tier - Init option in the From stock dropdown.
- The Search function for the online help (User Guide and Release Notes) has now been fixed.
- Purchase Order (PO) display: Inventory counts of zero on POs are no longer shown as just a forward slash, but instead as expected, for example “0/100 - YubiKey 5C”.
- The detail view of Purchase Orders with “ghost” inventory is now available. “Ghost” inventory was caused by Yubico adding a product to an Organization and then removing it.

1.21.52 Release 1.5.0 (22 October 2020)

Features

- It is now possible to delete multiple shipment requests simultaneously. This is useful when the system is unable to validate multiple addresses or when the wrong CSV file was uploaded by mistake.
- The CSV file upload now accepts alternative values for DeliveryType: instead of just 1 for Normal and 2 for Expedited, the words Normal and Expedited are now acceptable input. Integer parsing will be retained for backwards compatibility.

API

- GET /inventory has been extended so that it always returns product_mapping.

Resolved Issues

- Outstanding error messages are now cleared between shipment updates.
- Products no longer in inventory cannot be selected from the New shipping request page in the Console for a single shipment request. In the API, /shippablekeys returns only products still in inventory for inventory_type = 1.

Known Issues

When selecting shipments for bulk deletion, the number of shipment requests listed as available for deletion may not match the number displayed directly underneath the Back to Shipments button (e.g., “1 - 11 of 32” and yet there is only a single item shown in the list). The number of items listed in the table is correct, not the number shown on the upper right.
1.21.53 Release 1.4.0 (24 September 2020)

Features

- Improved /products API endpoint behavior: GET /products returns the list of products that are both a) in inventory and b) shippable.
- The delivery exceptions email feature has been completed.

Resolved Issues

- Inventory type in shipment requests always displays correctly now.
- The product images for multiple subscription tiers concurrently displayed are now consistent.

1.21.54 Release 1.3.1 (10 September 2020)

Known Issue

- When requesting shipment for a YubiKey Lanyard, the Inventory Type must be set at type 1, YubiKey Shipment, even if you are a subscription customer. This means that if you want to send a person both a lanyard and a key from subscription stock, you must make two separate shipment requests. Set the other inventory types as follows:

<table>
<thead>
<tr>
<th>Product or Inventory Name shown on Purchase Order</th>

- Use Inventory Type 1 if you have purchased keys on the perpetual mode and/or for lanyards.
- Use Inventory Type 2, YubiKey Tier SKU Shipment, if you are not a subscription customer, but have purchased tiers of keys instead of physical keys.
- Inventory Types 3, 4, and 5 are for subscription customers only.
  * Make sure to use up all of your Inventory Type 3, Initial, within the first year of your subscription.
  * Use Inventory Type 4 at any time: Buffer stock expires only at the end of your subscription term.
  * Use Inventory Type 5, Replacement, for users who have lost their keys or want to upgrade.

1.21.55 Release 1.3.0 (28 August 2020)

Features

- Enhanced and extended address validation status messages: error messages displayed as a result of failed address validation now give instructions for achieving successful validation.
- Improvements to the downloadable shipments CSV. It now shows for each shipment:
  - Organization name as well as org-ID
  - Purchase Order number
  - User email as well as user-ID
  - Delivery type indicating “normal” or “expedited”
  - Both shipment state ID and actual shipment state message
  - Both shipment product cost and shipment product taxes.
- Added YubiKey Lanyard to the product list.
- Begin preview of API to retrieve the available subscriptions.
Resolved Issues

- The customized email for DELIVERY EXCEPTIONS can now be sent as a preview sample to the logged-in YubiEnterprise Delivery user.

1.21.56 Release 1.2.0 (23 July 2020)

Features

- Updated Pricing
  - Introducing flat-fee shipping for up to 2 keys:
  - Introducing support for expedited shipping (1-3 days)

- Email customization and preview: The notification emails automatically sent to YubiKey recipients can be customized, and can also be previewed. Clicking the Send Sample button below the Customize Email field sends a sample of the customized email to the email ID logged into YubiEnterprise Delivery. For more details, see Notifying End-Users of Shipment and Delivery.

- PREVIEW: Ability to download shipments table: Organization owners, admins, and auditors can download the information on the Shipments tab as a CSV file. There are two options:
  - The entire contents can be downloaded - i.e., all the rows in the table, even if there are multiple pages.
  - Search results. If a search term is entered into the Search field, the rows containing the search term will be downloaded as a CSV file.

- Subscription Shipping through YubiEnterprise Delivery: Subscription customers can view their inventory on the Dashboard, with:
  - Premium Tier Subscription
  - Premium Tier Subscription Replacement
  - Premium Tier Subscription Buffer.

Subscription customers can specify shipment types:

- Initial shipment
- Buffer stock shipments
- Replacement YubiKey shipment

Subscription customers can download a CSV file with the contents of the shipments table (see “Ability to download shipments table” above), showing all the YubiKeys in the subscription tier and Subscription-Fulfillment-Type.

Known Issues

- The customized email for DELIVERY EXCEPTIONS cannot be sent as a preview sample to the logged-in YubiEnterprise Delivery user.
1.21.57 Release 1.0.0 (18 June 2020)

Features

YubiEnterprise Delivery enables organizations to manage orders of Yubico’s security keys (including YubiKeys), encompassing:

- Ordering shipment of a key or keys to a single address through the YubiEnterprise Delivery Console (the GUI) or the API
- Bulk upload of shipping orders for fulfillment using CSV files
- Shipping orders via the API
- Inventory management
- Tracking shipping costs
- Tracking shipment of the security keys you purchase from Yubico to the end-user
- Customizing auto-generated delivery notification emails
- Support for Virtual Product Tiers.

Known Limitations

- The following character limitations (including spaces) apply to all three methods of requesting shipment: Console (GUI), CSV, and API:
  - First Name: 15
  - Last Name: 20
  - Company: 20
  - Address lines 1, 2, 3: 40
  - City: 20
- In certain situations, if your computer has a platform FIDO authenticator such as Windows Hello and you want to enroll a YubiKey, the Windows UI displayed may ask you to enroll that other platform authenticator. **Workaround:** Hit **Cancel** to get to the YubiKey enrollment option.

Known Issue

- A shipment request whose status is indicated as **ShipmentStateError** must be recreated and resubmitted.

1.22 Copyright

This guide is available as help text accessible from each screen of Yubico’s YubiEnterprise Delivery Console. There is a help page for each tab in the Console, describing the functions available from that tab, and listing input parameters for actions such as requesting shipping or giving someone YubiEnterprise Delivery console privileges. The table of contents for the YubiEnterprise Delivery User Guide appears to the left of the help text.
